OPPORTUNITY BRIEF · SALES AND PRESALES

AI-enabled remote monitoring with wearables to predict and reduce hospital admissions in chronic heart failure.

Healthcare × Remote patient monitoring × Generative AI · OS041 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
62 is the world moving	**64** can we play, can we win	**HIGH** 0 named in the evidence	**€298m** partial evidence · per year	**LATER** research and standards activi...	**L1** 15 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is about deploying AI-enabled remote monitoring with CE-certified wearable devices to predict and reduce hospital admissions in chronic heart failure patients. It targets healthcare providers and payers who are under pressure to reduce readmissions and improve outcomes. The time is right because AI and wearable technology have matured, and clinical evidence is emerging that this approach can work.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	**€484m** €39.7m – €2.3bn	**€298m** €24.4m – €1.4bn	**€8.3m** €684k – €39.8m	partial
Observed: tendered contract value, annualised	€70.8m	€70.8m	€2.0m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Healthcare (EU27_2020)	46,762 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Generative AI	8.8 % of enterprises (10+ employees)	proxy	Eurostat · isoc_eb_ain2 · E_AI_TNLG	2025
Annual value of one engagement	€970k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Size-weighted buyer base	5,698 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Natural language generation Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes health activities; PROXY — residential care

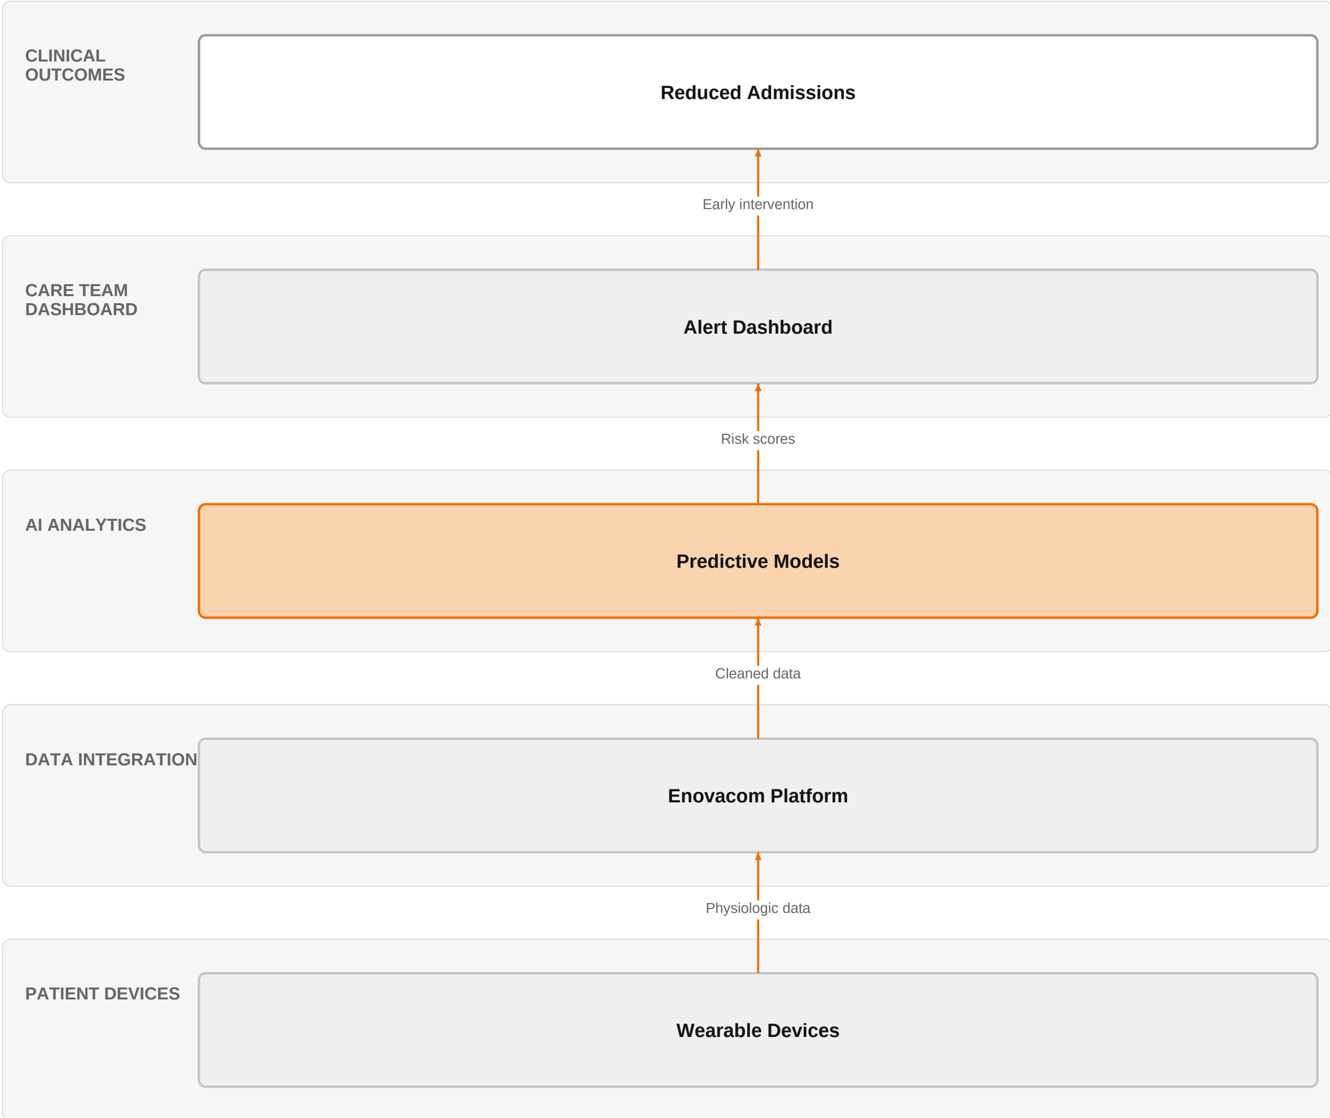
Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€70.8m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 7 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

AI-Enabled Remote Monitoring for Heart Failure



Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This solution connects patient wearables to a secure platform that applies AI to predict decompensation and alerts care teams to intervene early.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Wearable devices now enable continuous monitoring of physiologic measures outside traditional clinical settings, transforming cardiovascular medicine. AI is needed to analyze the large data volumes generated, making real-time prediction of decompensation feasible. Clinical studies, such as SMART-CARE, are investigating whether AI-enabled remote monitoring using CE-certified wearables can reduce hospital admissions. However, a reality check is emerging, suggesting that remote patient monitoring faces practical challenges in implementation.

`Sources: SIG-414D1342F56A openalex.org 2026-03-25; SIG-605D6DC17233 openalex.org 2025-09-12; SIG-E95AED1CBD71 openalex.org 2025-12-10; SIG-922D61D29366 bing.com 2026-05-26`

Who buys, and why now

The buyer is typically a chief medical officer or head of cardiology at a hospital or health system, who feels the pain of high readmission rates and the associated penalties. The trigger is often a quality improvement initiative or a value-based care contract that makes reducing admissions a financial priority. The operational pain is the manual review of device data and the inability to intervene early enough to prevent decompensation.

Why it is hot now — every claim bound to a dated source

- AI-enabled remote monitoring using CE-certified wearables can reduce hospital admissions in chronic heart failure. [SIG-E95AED1CBD71]
- Wearable devices enable continuous monitoring of physiologic measures outside traditional clinical settings. [SIG-414D1342F56A]
- AI-enabled remote monitoring using CE-certified wearable devices is being investigated to reduce hospital admissions and improve outcomes in chronic heart failure. [SIG-E95AED1CBD71]
- Wearable devices enable continuous monitoring of physiologic measures outside clinical settings, transforming cardiovascular medicine. [SIG-414D1342F56A]
- Artificial intelligence-based remote monitoring using CE-certified wearable devices is being investigated to reduce hospital admissions and improve outcomes in chronic heart failure. [SIG-E95AED1CBD71]
- Wearable devices offer a promising noninvasive solution for continuous monitoring of cardiovascular signals, but large data volumes require AI for analysis. [SIG-605D6DC17233]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution using its Healthcare experts, AI/Data/Cloud experts, and Digital experts. The engagement would start with a pilot using Enovacom/Enovalife to integrate patient data from wearables, then apply AI models (developed with partner NVIDIA) to predict decompensation, and deliver insights through a dashboard accessible to care teams. The solution would be hosted on Orange's certified cloud (HDS, SecNumCloud) to ensure data sovereignty and compliance.

Why Orange can win

Orange can win because it brings healthcare-specific expertise and certifications (HDS, SecNumCloud) that pure IT players lack. Its Enovacom/Enovalife offer is designed for healthcare data integration, and its partnership with NVIDIA provides AI capabilities. However, the assets are thin in terms of a ready-made RPM platform, so Orange would need to build a solution from components, which could be a disadvantage against competitors with more mature offerings.

Competitive landscape

HIGH competitive intensity (score 8.3; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers like Microsoft and Google Cloud, which offer Generative AI and have strong cloud platforms. Global system integrators like Accenture, Capgemini, IBM, Infosys, and TCS also sell AI solutions and have deep healthcare practices. Salesforce, as a customer-experience platform, competes in the patient engagement space. These players are strong in AI and scale, but may lack Orange's healthcare-specific certifications and local presence.

`Sources: SIG-922D61D29366 bing.com 2026-05-26`

Competitor	Category	Position here	Basis	Evidence
Google Cloud	Hyperscaler	sells Generative AI; competes in CX: Customer Experience — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Generative AI; competes in CX: Customer Experience — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Generative AI; competes in CX: Customer Experience	structural	—
Capgemini	Global systems integrator	sells Generative AI; competes in CX: Customer Experience	structural	—
IBM	Global systems integrator	sells Generative AI	structural	—
Infosys	Global systems integrator	sells Generative AI; competes in CX: Customer Experience	structural	—
Tata Consultancy Services	Global systems integrator	sells Generative AI; competes in CX: Customer Experience	structural	—
Salesforce	Customer-experience platform	sells Generative AI; competes in CX: Customer Experience	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

1. What is your current 30-day readmission rate for heart failure patients, and how does it compare to your target?
2. Do you already use any remote monitoring devices for heart failure, and if so, what challenges have you faced?
3. What is your current process for reviewing data from implantable devices or wearables, and how much staff time does it consume?
4. Are you under a value-based care contract or facing penalties for readmissions that make this a financial priority?
5. How do you currently integrate data from remote devices into your EHR, and what gaps exist?
6. What is your timeline for implementing a new remote monitoring program, and what budget is available?

Objections you will meet

They will say	You can answer
We already have a remote monitoring program with our own devices.	That's true, and many programs exist. However, the challenge is often the data volume and the ability to predict decompensation early. Our solution applies AI to your existing data to improve prediction, and we can integrate with your current devices.
The evidence for RPM is mixed; we're not convinced it works.	You're right that the evidence is mixed, but recent studies like SMART-CARE are specifically designed to address this. We can help you run a pilot to generate your own evidence in your patient population.
We're concerned about data security and compliance.	That's a valid concern. We host on HDS and SecNumCloud certified infrastructure, and we have ISO 27001 certification. We also have deep experience in healthcare data integration with Enovacom.

Risks and unknowns

The main risk is that the clinical evidence is still emerging, and the reality check suggests that RPM may not deliver on its promise without careful workflow integration. There is also uncertainty about reimbursement and whether providers will adopt a new platform. The solution depends on integrating with existing EHR systems, which can be complex. Finally, the competitive landscape is intense, with many large players offering similar capabilities.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a remote patient monitoring tender that highlights Enovacom / Enovalife's integration capabilities, the security and compliance certifications (HDS, ISO 27001, SecNumCloud), and the partnerships with Microsoft, Google Cloud, and NVIDIA to support AI-driven analytics on wearable data.
Sales	In a conversation with a European hospital network's cardiology or digital health lead, mention that Orange's Enovacom / Enovalife platform, combined with AI analytics and CE-certified wearables, can help reduce hospital admissions for chronic heart failure, and reference the MicroPort CardioFlow and Bliksund collaborations as proof points.
Strategist / Innovator	Commission a deep-dive brief on the technical and regulatory feasibility of pairing Enovacom / Enovalife with CE-certified wearables and AI analytics, leveraging AI / Data / Cloud experts and Healthcare experts, and note the HDS, ISO 27001, and SecNumCloud certifications as differentiators for European healthcare deployments.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
