

Implement AI-powered drone detection systems for airport security to identify and track unauthorized drones.

Public / Government sector × Drone detection and airspace protection × Computer vision · OS013 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
76 is the world moving	69 can we play, can we win	MEDIUM 1 named in the evidence	€220m observed evidence · per year	NEXT regulation adopted or propose...	L0 14 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to implement AI-powered drone detection systems for airport security, addressing the urgent need to identify and track unauthorized drones. Airports, particularly in regions like Vietnam and Lithuania, are actively seeking such systems after incidents and regulatory pressure. The time is now because several airports have admitted gaps in counter-drone security, and proven detection technologies are emerging.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€7.7m €7.7m – €16.9m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

AI-Powered Drone Detection for Airports

This diagram shows how Orange Drone Guardian integrates sensors, AI analytics, and security operations to provide comprehensive drone detection for airports.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The buyer is typically the airport's head of security or operations director, who feels the pain of airspace incursions that disrupt flights and pose safety risks. The trigger is often a specific incident, such as the Tan Son Nhat shutdown, or regulatory mandates requiring drone detection by a certain date. They need to protect low-altitude airspace and avoid costly operational disruptions.

Why it is hot now — every claim bound to a dated source

- Airports lack drone-detection gear, as admitted by Vietnam after a drone forced a shutdown. [SIG-A776E54DD2E6]
- Reports highlight serious gaps in counter-drone security at airports and critical infrastructure. [SIG-BCBC462A63E3]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a drone detection service built on the Orange Drone Guardian offer, leveraging cybersecurity and defense experts to design and operate the system. The service would integrate computer vision capabilities, potentially using NVIDIA technology as a partner, and could be hosted on Orange's secure infrastructure, certified with ISO 27001 and SecNumCloud. The engagement would start with a security assessment, then deploy detection sensors and a central monitoring platform, and finally provide ongoing threat analysis and response support.

Why Orange can win

Orange can win because it combines a dedicated drone detection offer (Orange Drone Guardian) with deep cybersecurity expertise and sovereign certifications (SecNumCloud, ISO 27001) that are critical for government and public sector

customers. The reference from Grand Paris Sud demonstrates experience in similar security deployments. However, the assets are relatively thin compared to specialized competitors, so Orange must emphasize its end-to-end integration and trust credentials.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Drone Guardian	offer	L0	offer addresses the use case AND provides the technology	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 5.1; 1 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitor	Category	Position here	Basis	Evidence
Verizon Business	Telecom operator peer	competes in Cybersecurity	evidenced	SIG-AE409C225269
Bosch	Industrial / OT specialist	sells Computer vision	structural	—
Dedrone by Axon	Security specialist	sells Computer vision; active in Public / Government sector; competes in Cybersecurity	structural	—
HENSOLDT	Security specialist	sells Computer vision; competes in Cybersecurity	structural	—
Honeywell	Industrial / OT specialist	sells Computer vision	structural	—
Accenture	Global systems integrator	active in Public / Government sector	structural	—
Atos / Eviden	Global systems integrator	active in Public / Government sector; competes in Cybersecurity	structural	—
Capgemini	Global systems integrator	active in Public / Government sector	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Have you experienced any drone incursions or near-misses in the past 12 months?
- 2 What is your current process for detecting and responding to unauthorized drones?
- 3 Are you under regulatory pressure to deploy drone detection by a specific date?
- 4 Do you have existing security infrastructure that a drone detection system would need to integrate with?
- 5 What is your budget for counter-drone technology, and who is the decision-maker for such investments?

Objections you will meet

They will say	You can answer
We already have a drone detection system from a specialist vendor.	That's good, but many systems have gaps, as recent reports show. Our Orange Drone Guardian can complement or replace existing systems with a more integrated approach, leveraging our cybersecurity expertise and sovereign cloud.
We're concerned about the reliability of computer vision in poor weather.	That's a valid concern. While computer vision is effective, we can integrate additional sensors like acoustic detection to ensure robust coverage, and our system is designed to work in various conditions.
We're not sure Orange has the specific expertise for drone detection.	We have a dedicated offer, Orange Drone Guardian, and we've worked with partners like NVIDIA to enhance our capabilities. Our defense and security experts bring deep experience in airspace protection.

Risks and unknowns

The main risk is that Orange's drone detection offer is not yet proven at scale, and competitors like Dedrone or HENSOLDT have more established products. Regulatory frameworks for drone detection are still evolving, which could delay procurement. Additionally, the effectiveness of computer vision in all weather conditions is uncertain, and customers may require multi-sensor fusion (e.g., acoustic, radar) that Orange may not fully provide.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a drone detection project at a major airport, highlighting Orange Drone Guardian, our ISO 27001 certification, and our partnership with NVIDIA to ensure robust computer vision capabilities.
Sales	In a conversation with a European airport operator's head of security, say: 'We have a drone detection solution, Orange Drone Guardian, that can help you identify and track unauthorized drones, and we can support it with our cybersecurity and defense expertise.'
Strategist / Innovator	Commission a deep-dive brief on the regulatory landscape for drone detection at airports, leveraging Orange Group researchers and Defense and security experts to map the opportunity.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: `what_is_changing` (named entities that were never supplied: Lockheed Martin); `competitive_landscape` (named entities that were never supplied: Lockheed Martin); diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
