

SIEM/SOAR-based OT security analytics for legacy SCADA and ICS in brownfield manufacturing sites.

Manufacturing × OT and industrial control system security × SIEM and SOAR · OS021 v2 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
74 is the world moving	86 can we play, can we win	MEDIUM 1 named in the evidence	€3.8bn observed evidence · per year	NEXT regulation adopted or propose...	L0 17 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is about deploying SIEM/SOAR-based OT security analytics for legacy SCADA and ICS in brownfield manufacturing sites. It targets manufacturers who operate aging industrial control systems that cannot be simply replaced, and it exists now because of rising cyber threats and regulatory pressure to address persistent OT security gaps.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€5.3bn €959m – €28.7bn	€3.8bn €688m – €20.6bn	€230m €41.3m – €1.2bn	observed
Observed: tendered contract value, annualised	€20.9m €20.9m – €56.6m	€20.9m €20.9m – €56.6m	€1.3m €1.3m – €3.4m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Manufacturing (EU27_2020)	238,122 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting SIEM and SOAR	40.3 % of enterprises (10+ employees)	observed	Eurostat · isoc_cisce_ran2 · E_SECMSMS	2022
Annual value of one engagement	€337k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Size-weighted buyer base	39,220 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€20.9m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 14 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

OT Security Analytics for Brownfield Manufacturing

This diagram shows how Orange's managed SIEM/SOAR service collects data from legacy SCADA/ICS systems and network taps, applies threat intelligence, and delivers actionable insights to reduce risk and meet compliance.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Legacy SCADA systems have known vulnerabilities and communication protocol weaknesses, and multiple vulnerabilities in Siemens products allow remote code execution and denial of service. Cyberattacks on water utilities have exposed persistent OT security gaps, prompting calls for binding directives. Brownfield sites have unique mixes of legacy equipment that cannot be simply replaced, making complete transformation daunting and risky. These factors are pushing manufacturers to seek analytics solutions that work with existing infrastructure.

Who buys, and why now

The CISO or head of OT security signs the contract, but the plant operations manager and control systems engineers feel the pain daily. They are triggered by a near-miss incident, a security audit finding, or a regulatory directive that forces them to demonstrate visibility and response capability for legacy OT assets. The pain is operational: they cannot see what is happening on the plant floor, lack context for alerts, and cannot respond quickly to threats without disrupting production.

Why it is hot now — every claim bound to a dated source

- Multiple vulnerabilities in Siemens products allow remote code execution and denial of service. [SIG-2199333D7866]
- Cyberattacks on water utilities expose persistent OT security gaps, urging binding directives. [SIG-49028056B8B3, SIG-FCFE20A18D9A]
- Legacy SCADA systems have vulnerabilities and communication protocol weaknesses. [SIG-8D442815F55B]

- Brownfield industrial sites have unique mixes of legacy equipment that cannot be simply replaced. [SIG-E2034B250974]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a managed SIEM/SOAR service using Orange Cyberdefense managed services, leveraging cybersecurity experts and IoT experts. The engagement would start with a discovery and assessment phase to map the brownfield OT environment, then deploy monitoring and analytics on existing infrastructure, and finally integrate with SOAR for automated response playbooks. Orange Group researchers could contribute to custom analytics for legacy protocols. The service would be delivered under ISO 27001 and TISAX certifications, with Palo Alto Networks as a technology partner for advanced detection.

Why Orange can win

Orange can win because it combines a certified managed security service (ISO 27001, TISAX) with deep OT expertise from its cybersecurity and IoT experts, and it can leverage its Group researchers for custom analytics. The partnership with Palo Alto Networks strengthens the technical offer. However, the assets are not unique; competitors also have strong SIEM/SOAR offerings, so Orange must differentiate on its ability to handle brownfield complexity and its sovereign, certified delivery.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L0	offer addresses the use case AND provides the technology	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 7.3; 1 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Siemens is a strong industrial OT specialist, but its focus is on its own products and it may not be neutral for multi-vendor environments. Atos/Eviden, BT, Telefonica Tech, Airbus Protect, CrowdStrike, Leonardo, and Palo Alto Networks all sell SIEM and SOAR, and each has strengths in security. Palo Alto Networks is also an Orange partner, which could be a differentiator. The customer will compare on price, depth of OT-specific analytics, and ability to integrate with legacy systems.

Competitor	Category	Position here	Basis	Evidence
------------	----------	---------------	-------	----------

Siemens	Industrial / OT specialist	active in Manufacturing; competes in OX: Smart Industries	evidenced	SIG-2199333D7866
Atos / Eviden	Global systems integrator	sells SIEM and SOAR; competes in Cybersecurity	structural	—
BT Business	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Telefonica Tech	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Airbus Protect	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
CrowdStrike	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Leonardo	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Palo Alto Networks	Security specialist	sells SIEM and SOAR; competes in Cybersecurity — also an Orange partner	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is the age and mix of your SCADA/ICS systems, and have you attempted any security monitoring on them before?
- 2 Have you experienced any security incidents or near-misses on your OT network in the last 12 months?
- 3 What is your current visibility into OT network traffic and anomalies, and how do you detect and respond to threats today?
- 4 Are you under any regulatory or compliance pressure to improve OT security, and what is the timeline?
- 5 Who in your organization owns OT security, and how do they interact with the IT security team?
- 6 What is your tolerance for downtime or production disruption when implementing security monitoring?

Objections you will meet

They will say	You can answer
We can't afford to replace our legacy systems, so any security solution must work with what we have.	That's exactly why we focus on brownfield environments. Our approach is non-intrusive and designed to integrate with existing legacy equipment, not replace it.
We already have a SIEM from another vendor.	Many of our customers do. We can complement your existing SIEM with OT-specific analytics and SOAR capabilities, or we can consolidate if you prefer a single platform.
OT security is too risky to outsource; we need to keep everything in-house.	We understand the sensitivity. Our managed service can be deployed on-premises or in a sovereign cloud, and we comply with ISO 27001 and TISAX to ensure data protection.

Risks and unknowns

The main risk is that brownfield sites may have undocumented or unsupported systems that are difficult to monitor without disrupting operations. There is also uncertainty about the customer's willingness to share OT data with a managed service provider, and the regulatory landscape is still evolving. The effectiveness of AI-driven detection on legacy protocols is not fully proven, and the customer may have existing security investments that complicate the sale.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Bid brief: for a brownfield manufacturing bid, assemble a proposal that highlights our Orange Cyberdefense managed services, our cybersecurity and IoT experts, and our partnership with Palo Alto Networks, using our reference accounts (Colgate-Palmolive, Mondelez International, Saint-Gobain Glass) as proof points for OT security analytics.
Sales	In a conversation with a manufacturing account's OT security lead, say: 'Given the recent vulnerabilities in Siemens products and the regulatory push on OT security, we can help you detect and respond to threats on your legacy SCADA systems without replacing them—using our managed services backed by ISO 27001 and TISAX.'

Strategist / Innovator	Deep-dive brief: map which of our supplied reference accounts (Colgate-Palmolive, Mondelez International, Saint-Gobain Glass) run brownfield SCADA/ICS and could pilot a SIEM/SOAR-based OT security analytics offering, and assess how our ISO 27001 and TISAX certifications plus Palo Alto Networks partnership can be leveraged to differentiate.
------------------------	---

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
