

Deploy OT security monitoring and response for energy utilities to address vulnerabilities in operational technology.

Energy × OT and industrial control system security × SIEM and SOAR · OS022 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
71 is the world moving	72 can we play, can we win	MEDIUM 1 named in the evidence	€210m observed evidence · per year	NOW budgeted procurement within 1...	L0 15 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 3.0 published reference(s) in Energy, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity is to deploy OT security monitoring and response for energy utilities, addressing persistent vulnerabilities in operational technology. The need is urgent due to recent cyberattacks on critical infrastructure and known vulnerabilities in widely used industrial products. Orange can deliver this through its cybersecurity experts and managed services, leveraging its trusted and sovereign infrastructure.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€255m €57.0m – €3.2bn	€210m €46.9m – €2.7bn	€12.6m €2.8m – €160m	observed
Observed: tendered contract value, annualised	€172m €172m – €460m	€172m €172m – €460m	€10.3m €10.3m – €27.6m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Energy (EU27_2020)	5,796 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting SIEM and SOAR	63.4 % of enterprises (10+ employees)	observed	Eurostat · isoc_cisce_ran2 · E_SECMSMS	2022
Annual value of one engagement	€299k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-07
Size-weighted buyer base	1,341 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€172m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-07
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 21 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

OT Security Monitoring and Response

This diagram shows how Orange's managed OT security service monitors and protects industrial control systems, leading to reduced downtime and compliance.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Recent cyberattacks on water utilities have exposed persistent OT security gaps, prompting calls for binding directives from cybersecurity authorities. Additionally, multiple vulnerabilities have been discovered in Siemens industrial products, allowing remote code execution and denial of service, which directly affect energy utilities relying on such equipment. These incidents highlight the inadequacy of traditional security measures and the need for specialized OT monitoring and response.

Sources: SIG-49028056B8B3 GovCIO Media & Research 2026-08-12; SIG-FCFE20A18D9A Industrial Cyber 2026-08-03; SIG-2199333D7866 cert.ssi.gouv.fr 2026-08-12

Who buys, and why now

The buyer is typically the Chief Information Security Officer (CISO) or the Head of Operational Technology at an energy utility. The pain is operational: they face the risk of production downtime, safety incidents, and regulatory fines due to unmonitored OT environments. The trigger is often a recent cyber incident in the sector, a regulatory audit, or the discovery of vulnerabilities in their specific industrial control systems.

Why it is hot now — every claim bound to a dated source

- Cyberattacks on water sector expose persistent OT security gaps, and OTCC urges CISA to issue binding directive. [SIG-49028056B8B3, SIG-FCFE20A18D9A]
- Multiple vulnerabilities in Siemens products allow remote code execution and denial of service. [SIG-2199333D7866]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a managed OT security monitoring and response service, leveraging Orange Cyberdefense managed services and cybersecurity experts. The engagement would start with an assessment of the customer's OT environment, followed by deployment of monitoring sensors and integration with a SIEM/SOAR platform. Orange would then provide 24/7 monitoring, threat detection, and incident response, all delivered on sovereign and certified infrastructure (ISO 27001, SecNumCloud).

Why Orange can win

Orange can win because it combines its cybersecurity expertise with a trusted, sovereign infrastructure that is certified to the highest standards. The ability to offer managed services backed by ISO 27001 and SecNumCloud, along with a dedicated team of cybersecurity and IoT experts, provides a level of assurance that pure-play security vendors may lack. However, the assets are not unique, and competitors also offer similar services.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L0	offer addresses the use case AND provides the technology	unconfirmed
Palo Alto Networks	partner	L2	partner provides the required technology	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 7.3; 1 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include Siemens, which has deep industrial domain expertise and is a major OT equipment provider; Atos/Eviden, BT Business, Telefonica Tech, Airbus Protect, CrowdStrike, Leonardo, and Palo Alto Networks (also an Orange partner) all sell SIEM and SOAR solutions. The customer will compare Orange against these players based on price, depth of OT expertise, and the ability to provide a fully managed, sovereign service.

Competitor	Category	Position here	Basis	Evidence
Siemens	Industrial / OT specialist	active in Energy	evidenced	SIG-2199333D7866
Atos / Eviden	Global systems integrator	sells SIEM and SOAR; competes in Cybersecurity	structural	—
BT Business	Telecom operator peer	sells SIEM and SOAR; competes in Connectivity Solutions, Cybersecurity	structural	—
Telefonica Tech	Telecom operator peer	sells SIEM and SOAR; active in Energy; competes in Connectivity Solutions, Cybersecurity	structural	—
Airbus Protect	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
CrowdStrike	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Leonardo	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—

Palo Alto Networks	Security specialist	sells SIEM and SOAR; competes in Cybersecurity — also an Orange partner	structural	—
--------------------	---------------------	---	------------	---

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Have you experienced any recent security incidents in your OT environment, and how were they detected?
- 2 What is your current approach to monitoring and securing your industrial control systems?
- 3 Are you aware of the recent vulnerabilities in Siemens products and how they might affect your operations?
- 4 Do you have a dedicated OT security team, or is this handled by your IT security team?
- 5 What regulatory or compliance requirements are you subject to regarding OT security?
- 6 How would you prioritize OT security investments compared to other capital projects?

Objections you will meet

They will say	You can answer
We already have security monitoring in place from our IT provider.	That's true, but OT environments have unique protocols and safety requirements that generic IT monitoring often misses. Our service is specifically designed for OT, with deep expertise in industrial control systems.
We are concerned about the cost of a managed service.	Cost is a valid concern, but the potential cost of a cyber incident in OT—production downtime, safety risks, regulatory fines—can be far higher. Our service is scalable and can be tailored to your budget.
We prefer to work with our equipment vendor, like Siemens, for security.	Siemens is a great partner for equipment, but their security offerings may not be as comprehensive or independent. Our service is vendor-agnostic and can monitor all your OT assets, not just one brand.

Risks and unknowns

The main risk is that energy utilities may prefer to work with their existing OT equipment vendors (like Siemens) for security, or may have in-house capabilities. There is also uncertainty about the regulatory landscape and whether binding directives will be issued, which could accelerate or delay purchasing decisions. Additionally, the integration of OT monitoring with existing IT security operations can be complex and may face resistance from operational teams.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for an energy utility's OT security procurement, highlighting Orange Cyberdefense managed services, ISO 27001 and SecNumCloud certifications, and the Palo Alto Networks partnership, while referencing the Siemens vulnerabilities to underscore urgency.
Sales	In a meeting with the head of OT security at a European energy utility, say: 'Given the recent cyberattacks on water sector and Siemens vulnerabilities, how are you currently monitoring your OT environment? Orange Cyberdefense's managed services, backed by our ISO 27001 certification, could help you detect and respond to such threats.'
Strategist / Innovator	Commission a deep-dive brief on OT security monitoring for energy utilities, leveraging Orange Cyberdefense managed services and Palo Alto Networks partnership to map the competitive landscape.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.
