

Managed OT security monitoring for water utilities to comply with CISA's anticipated binding OT cybersecurity directive.

Public / Government sector × OT and industrial control system security × SIEM and SOAR · OS035 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
65 is the world moving	76 can we play, can we win	MEDIUM 0 named in the evidence	€220m observed evidence · per year	NOW budgeted procurement within 1...	L0 14 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

Managed OT security monitoring for water utilities, driven by CISA's anticipated binding OT cybersecurity directive. This opportunity targets public water utilities that must demonstrate continuous monitoring and incident response for their operational technology (OT) environments. The urgency stems from recent cyberattacks on water utilities that exposed persistent OT security gaps, prompting regulatory action.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€13.2m €13.2m – €28.9m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Managed OT Security Monitoring for Water Utilities

This diagram shows how Orange's managed SOC, combined with a partner SIEM/SOAR platform, provides continuous monitoring and compliance for water utility OT environments.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Recent cyberattacks on water utilities have exposed persistent OT security gaps, leading the OT Cyber Coalition (OTCC) to urge CISA to issue a binding OT cybersecurity directive. This regulatory pressure is driving water utilities to seek managed SIEM and SOC services, as evidenced by a framework agreement tender from Malta's Water Services Corporation for SIEM and SOC services. The shift from voluntary to mandatory compliance is creating an immediate need for OT-specific monitoring capabilities.

Sources: SIG-49028056B8B3 GovCIO Media & Research 2026-08-12; SIG-FCFE20A18D9A Industrial Cyber 2026-08-03; SIG-018E7696A719 ted.europa.eu 2026-08-05

Who buys, and why now

The buyer is typically the Chief Information Security Officer (CISO) or Head of IT/OT at a water utility, with the Chief Executive Officer or board as the ultimate signatory due to regulatory risk. The pain is operational: they lack visibility into OT networks, struggle to detect and respond to threats like those that have hit other utilities, and face potential fines or service disruption if they fail to comply. The trigger is the anticipated binding directive, which forces them to act within a defined timeframe or face penalties.

Why it is hot now — every claim bound to a dated source

- Cyberattacks on the water sector expose persistent OT security gaps, prompting calls for a binding OT cybersecurity directive. [SIG-49028056B8B3, SIG-FCFE20A18D9A]
- Cyberattacks on critical infrastructure like water utilities highlight OT security gaps, and regulators are urged to issue binding directives. [SIG-49028056B8B3, SIG-FCFE20A18D9A]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a managed OT security monitoring service built on Orange Cyberdefense managed services, leveraging our cybersecurity experts and ISO 27001 certification. The engagement would start with an assessment of the utility's OT environment, then deploy SIEM and SOAR capabilities (potentially in partnership with Palo Alto Networks) to provide continuous monitoring and incident response. The service would be delivered from our certified SOCs, ensuring compliance with regulatory requirements. The phased approach would begin with a pilot on a critical water treatment plant, then expand to full coverage.

Why Orange can win

Orange can win because we combine a trusted brand with certified security operations (ISO 27001, SecNumCloud) and deep expertise in both cybersecurity and defense. Our partnership with Palo Alto Networks strengthens our SIEM/SOAR offering. However, the assets are thin: we lack a specific OT security reference in the water sector, and our competitors have similar or stronger credentials. We must leverage our sovereign and certified infrastructure as a differentiator, especially for public sector customers.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator

Competitive landscape

MEDIUM competitive intensity (score 7.1; 0 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include global systems integrators like Atos/Eviden, telecom peers BT and Telefonica Tech, and security specialists such as Airbus Protect, CrowdStrike, Leonardo, Palo Alto Networks, and Nomios. Each brings strengths: Atos/Eviden has deep SIEM/SOAR integration experience; BT and Telefonica Tech offer telecom-grade managed services; Airbus Protect and Leonardo have strong defense and public sector ties; CrowdStrike is a leader in endpoint detection; Palo Alto Networks is a technology leader (and our partner); Nomios is a regional integrator with local presence. The customer will compare on price, compliance readiness, and OT-specific expertise.

Sources: SIG-018E7696A719 ted.europa.eu 2026-08-05

Competitor	Category	Position here	Basis	Evidence
Atos / Eviden	Global systems integrator	sells SIEM and SOAR; active in Public / Government sector; competes in Cybersecurity	structural	—
BT Business	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Telefonica Tech	Telecom operator peer	sells SIEM and SOAR; active in Public / Government sector; competes in Cybersecurity	structural	—

Airbus Protect	Security specialist	sells SIEM and SOAR; active in Public / Government sector; competes in Cybersecurity	structural	—
CrowdStrike	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Leonardo	Security specialist	sells SIEM and SOAR; active in Public / Government sector; competes in Cybersecurity	structural	—
Palo Alto Networks	Security specialist	sells SIEM and SOAR; competes in Cybersecurity — also an Orange partner	structural	—
Nomios	Regional integrator or reseller	sells SIEM and SOAR; competes in Cybersecurity	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Have you experienced any cyber incidents in your OT environment in the past 12 months?
- 2 Do you currently have a dedicated OT security monitoring solution, or is it covered by your IT SOC?
- 3 What is your timeline for achieving compliance with the anticipated CISA directive?
- 4 Who is the executive sponsor for OT security in your organization?
- 5 Are you currently using any SIEM or SOAR tools in your OT environment?
- 6 What is your budget for OT security monitoring services in the next fiscal year?

Objections you will meet

They will say	You can answer
We already have a SOC that covers our IT and OT networks.	That's a good start, but OT environments have unique protocols and safety constraints that generic IT SOCs often miss. Our managed service is specifically designed for OT, with certified analysts and playbooks tailored to water utilities.
We're considering building this capability in-house.	Building in-house is possible, but it requires significant investment in tools, training, and 24/7 staffing. Our managed service gives you immediate compliance and expertise without the capital outlay, and you can retain control over policy.
Your price is higher than other managed security providers.	Price is important, but our service includes certified infrastructure (ISO 27001, SecNumCloud) and sovereign delivery, which is critical for public sector compliance. We also offer flexible deployment options to match your budget.

Risks and unknowns

The primary risk is that the binding directive may be delayed or diluted, reducing urgency. There is also uncertainty about the specific technical requirements the directive will impose, which could affect solution design. Additionally, water utilities may have budget constraints or prefer to build in-house capabilities. We also lack a proven reference in this exact vertical, which could be a disadvantage in competitive tenders.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Bid brief: assemble a proposal for a water utility, highlighting Orange Cyberdefense managed services, ISO 27001, SecNumCloud, and CISPE certifications, and reference Grand Paris Sud as a proof point.
Sales	In a meeting with a water utility's head of security, say: 'Given the anticipated binding OT cybersecurity directive, we can help you prepare with our managed OT security monitoring, leveraging our partnership with Palo Alto Networks and our ISO 27001 certified processes.'
Strategist / Innovator	Deep-dive brief: map the current OT security monitoring capabilities of water utilities against the anticipated CISA directive, using Orange Cyberdefense managed services and Palo Alto Networks partnership to identify a differentiated offering.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
