

Provide data quality and utility labeling for health data assets under the European Health Data Space.

Healthcare × Regulatory compliance and reporting × Cloud data platform · OS042 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
73 is the world moving	64 can we play, can we win	HIGH 0 named in the evidence	€817m partial evidence · per year	NOW budgeted procurement within 1...	L1 13 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity provides data quality and utility labeling for health data assets under the European Health Data Space (EHDS). It targets healthcare providers, payers, and public health authorities that need to prepare their datasets for secondary use and regulatory compliance. The need is immediate due to the EHDS framework and the upcoming Data Quality and Utility Label requirement.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€1.3bn €109m – €6.3bn	€817m €67.0m – €3.9bn	€22.9m €1.9m – €109m	partial
Observed: tendered contract value, annualised	€70.8m	€70.8m	€2.0m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Healthcare (EU27_2020)	46,762 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Cloud data platform	24.0 % of enterprises (10+ employees)	proxy	Eurostat · isoc_cicce_usen2 · E_CC_PDB	2025
Annual value of one engagement	€970k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Size-weighted buyer base	5,698 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Cloud-hosted database Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes health activities; PROXY — residential care

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€70.8m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 7 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

EHDS Data Quality and Utility Labeling Solution

This diagram shows how Orange's labeling and assessment services, running on a partner cloud platform and sovereign infrastructure, enable EHDS compliance for health data assets.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The European Health Data Space introduces a Data Quality and Utility Label, creating a formal requirement for health data assets to be assessed and labeled. This is a regulatory change that will drive demand for data quality assessment and labeling services. Additionally, there is growing adoption of secondary data use in France, as reported by Healthcare IT News, and CROs are adapting to the EHDS framework, indicating market readiness. These developments signal a shift toward standardized data quality and utility evaluation in healthcare.

Sources: SIG-D49E57B7296C ec.europa.eu 2026-07-27; SIG-98B33B5AA810 Healthcare IT News 2026-06-23; SIG-458CA0068D47 Applied Clinical Trial 2026-07-23

Who buys, and why now

The primary buyer is the Chief Data Officer or Head of Health Data Governance within a hospital network, regional health authority, or national health data agency. The pain is operational: they must ensure their datasets meet the EHDS Data Quality and Utility Label criteria to enable secondary use, but they lack a systematic way to assess and improve data quality. The trigger is the upcoming EHDS compliance deadlines and the need to participate in cross-border data sharing initiatives.

Why it is hot now — every claim bound to a dated source

- The European Health Data Space includes a Data Quality and Utility Label. [SIG-D49E57B7296C]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a team of AI/Data/Cloud experts, Digital experts, and Healthcare experts to conduct a data quality and utility assessment of the customer's health data assets. The engagement would start with a gap analysis against the EHDS label requirements, followed by data quality improvement recommendations, and finally the implementation of a labeling process. The solution would be hosted on a sovereign cloud infrastructure, leveraging Orange's certifications (ISO 27001, SecNumCloud, HDS) to ensure compliance and trust. Orange Cyberdefense managed services could be included to secure the data throughout the process.

Why Orange can win

Orange can win because it combines deep healthcare expertise with sovereign cloud capabilities and security certifications (HDS, SecNumCloud) that are critical for handling health data. The ability to leverage Orange Group researchers and a certified infrastructure provides a trust advantage over hyperscalers and pure-play consultancies. However, the assets are thin in terms of a specific data quality labeling product, so the win will depend on the strength of the consulting and integration approach.

Named assets behind this — each individually inspectable (LK-08)

Competitive landscape

HIGH competitive intensity (score 8.6; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Google Cloud	Hyperscaler	sells Cloud data platform; competes in Cloud, CX: Customer Experience — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Cloud data platform; competes in Cloud, CX: Customer Experience — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Cloud data platform; competes in Cloud, CX: Customer Experience	structural	—
Capgemini	Global systems integrator	sells Cloud data platform; competes in Cloud, CX: Customer Experience	structural	—

DXC Technology	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Infosys	Global systems integrator	sells Cloud data platform; competes in Cloud, CX: Customer Experience	structural	—
Sopra Steria	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Are you preparing your health data assets for the European Health Data Space secondary use requirements?
- 2 Do you have a current inventory of your data assets and their quality levels?
- 3 Have you been contacted by your national health authority about EHDS compliance deadlines?
- 4 What is your current approach to data quality management for your health data?
- 5 Do you have a designated data governance officer or team responsible for EHDS readiness?

Objections you will meet

They will say	You can answer
We already have a cloud data platform from a hyperscaler; why do we need Orange?	That's true, and hyperscalers offer strong platforms. However, Orange brings healthcare-specific expertise and sovereign certifications like HDS and SecNumCloud, which are essential for health data compliance. We can complement your existing infrastructure with our labeling and quality services.
The EHDS label is not mandatory yet; we can wait.	You're right that it's not mandatory yet, but early preparation will give you a competitive advantage and reduce last-minute compliance risks. The regulatory direction is clear, and starting now allows you to address data quality issues proactively.
We have internal teams that can handle this.	Internal teams are valuable, but they may lack the specific expertise in EHDS labeling and the regulatory nuances. Orange brings a dedicated team of healthcare and data experts who have worked on similar compliance projects, and we can accelerate your readiness.

Risks and unknowns

The main risk is that the EHDS Data Quality and Utility Label specifications are not yet fully defined, which could delay customer decisions. There is also uncertainty about the level of detail and enforcement of the label, and whether customers will prioritize this over other operational pressures. Additionally, the competitive landscape is intense, with hyperscalers and GIs offering similar capabilities, so differentiation must be clear.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a healthcare data platform tender that addresses the EHDS Data Quality and Utility Label, incorporating our HDS certification, ISO 27001, and SecNumCloud, and referencing our experience with MicroPort CardioFlow and Bliksund.
Sales	In a conversation with a healthcare data platform buyer, say: 'We can help you prepare for the European Health Data Space data quality and utility labeling requirements, leveraging our HDS-certified cloud and cybersecurity expertise.'
Strategist / Innovator	Commission a deep-dive brief on the EHDS Data Quality and Utility Label, mapping its requirements against our HDS, ISO 27001, and SecNumCloud certifications to identify capability gaps and investment priorities for the next quarter.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: competitive_landscape (no claim survived evidence binding); diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
