

IoT-enabled soil and groundwater monitoring for compliance reporting in public sector industrial site rehabilitation projects.

Public / Government sector × Regulatory compliance and reporting × IoT platform · OS047 v2 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
61 is the world moving	48 can we play, can we win	HIGH 0 named in the evidence	€220m observed evidence · per year	NOW budgeted procurement within 1...	L1 9 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to provide IoT-enabled soil and groundwater monitoring for compliance reporting in public sector industrial site rehabilitation projects. It targets government agencies and public bodies managing contaminated sites, who need to demonstrate regulatory compliance to regulators and the public. The need is immediate because several European public tenders for site rehabilitation and monitoring are active or upcoming.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€2.6m €2.6m – €5.8m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

IoT Soil Monitoring for Compliance

This diagram shows how sensor data flows from field devices through Orange's secure IoT platform to generate compliance reports.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Public sector entities across Europe are increasingly procuring industrial site rehabilitation and technical inspection services, as evidenced by recent tenders in Ireland, Hungary, and Belgium. The EU has established a centre for industrial transformation and emissions (INCITE), indicating a policy focus on industrial emissions and environmental compliance. IoT technology is maturing, with advances in anomaly detection and secure data sharing for industrial networks, making real-time monitoring more feasible and cost-effective.

Who buys, and why now

The buyer is typically a public sector agency such as a national environmental department or a regional land remediation authority. The pain is felt by project managers and environmental compliance officers who must produce periodic monitoring reports for regulators and the public, often with manual data collection and fragmented systems. The trigger is a new rehabilitation project or a regulatory deadline that requires demonstrable compliance, prompting them to seek a turnkey monitoring solution.

Why it is hot now — every claim bound to a dated source

- The Department of Climate Energy and the Environment is procuring technical inspection services for historic mines, including environmental monitoring. [SIG-315525C0895D]

- The EU has established a centre for industrial transformation and emissions (INCITE), indicating a policy focus on industrial emissions. [SIG-48B3847C149B]
- Contracting authorities in Hungary and Belgium are procuring industrial site rehabilitation and polluted soil treatment services. [SIG-81B837A5B62C, SIG-8CCC48807679]
- Contracting authorities are procuring industrial site rehabilitation services, indicating a need for monitoring and compliance reporting. [SIG-81B837A5B62C, SIG-8CCC48807679]
- A state-owned retailer is procuring a framework for service and delivery of fire extinguishers to its shops. [SIG-B2B9780FAB76]
- Public sector entities are procuring fire safety services and equipment. [SIG-B2B9780FAB76, SIG-E9FEED530DDF]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution using its Live Objects IoT platform to collect and manage sensor data from soil and groundwater monitoring points. Orange Group researchers could contribute to data analytics and anomaly detection. The solution would be delivered on Orange's certified infrastructure (ISO 27001, SecNumCloud, CISPE) to ensure data sovereignty and security. Orange Cyberdefense managed services would provide ongoing security monitoring. The engagement would start with a pilot on one site, then scale to a multi-site framework.

Why Orange can win

Orange can win because it offers a sovereign, certified IoT platform (Live Objects) combined with security expertise (Orange Cyberdefense) and a proven reference in public sector IoT (Grand Paris Sud). The certifications (ISO 27001, SecNumCloud, CISPE) are critical for public sector trust. However, the assets are thin in terms of specific soil monitoring expertise, so Orange would need to partner with environmental specialists to fill that gap.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Live Objects	offer	L1	offer provides the technology in a matching domain	unconfirmed
Orange Cyberdefense managed services	offer	L1	offer addresses the use case but not this technology	unconfirmed
ISO 27001	certification	SUP	certification Orange holds is required by this vertical	unconfirmed
SecNumCloud	certification	SUP	certification Orange holds is required by this vertical	unconfirmed
CISPE	certification	SUP	certification Orange holds is required by this vertical	unconfirmed
IoT experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Orange Group researchers	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Grand Paris Sud	reference	SUP	published reference in this vertical, different use case	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.2; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers like AWS, which offers a broad IoT platform but may lack public sector trust; telecom peers like Deutsche Telekom, Telefonica Tech, and Vodafone Business, which have strong IoT offerings and public sector presence; and global integrators like NTT DATA, which can provide end-to-end solutions. Each competitor is strong in platform breadth or integration, but Orange differentiates with sovereign certifications and a local presence.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells IoT platform; competes in OX: Smart Industries — also an Orange partner	structural	—

Deutsche Telekom / T-Systems	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in OX: Smart Industries	structural	—
NTT DATA	Global systems integrator	sells IoT platform; competes in OX: Smart Industries	structural	—
Proximus	Telecom operator peer	sells IoT platform	structural	—
Telefonica Tech	Telecom operator peer	sells IoT platform; active in Public / Government sector	structural	—
Telia Company	Telecom operator peer	sells IoT platform; competes in OX: Smart Industries	structural	—
Verizon Business	Telecom operator peer	sells IoT platform	structural	—
Vodafone Business	Telecom operator peer	sells IoT platform; competes in OX: Smart Industries	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Are you currently managing any industrial site rehabilitation projects that require environmental monitoring for regulatory compliance?
- 2 How do you currently collect and report soil and groundwater data? Is it manual or automated?
- 3 What are the key compliance deadlines or reporting requirements you face in the next 12 months?
- 4 Do you have existing IoT infrastructure or sensors deployed on your sites?
- 5 Who is responsible for environmental compliance in your organization, and what is their biggest pain point?
- 6 Have you considered a managed service for monitoring and reporting, or do you prefer to build in-house?

Objections you will meet

They will say	You can answer
We already have a monitoring system in place.	That's true, many agencies do. But our solution can integrate with your existing sensors and provide a unified dashboard for compliance reporting, reducing manual effort and improving accuracy.
We are concerned about data security and sovereignty.	That's a valid concern. Orange offers ISO 27001, SecNumCloud, and CISPE certified infrastructure, ensuring your data is stored and processed in compliance with EU regulations.
We have budget constraints.	We understand budget pressures. Our solution can be phased, starting with a pilot on one site to demonstrate value, and then scaling as budget allows.
Why should we choose Orange over a hyperscaler like AWS?	Hyperscalers offer broad platforms, but Orange provides sovereign, certified infrastructure and local support, which is critical for public sector compliance. Our reference with Grand Paris Sud shows we can deliver.

Risks and unknowns

The main risk is that public procurement cycles are slow and may not align with Orange's sales timeline. There is also uncertainty about the specific technical requirements for soil and groundwater monitoring, which may require specialized sensors and expertise not fully covered by Orange's current assets. Additionally, the competitive intensity is high, and customers may already have preferred suppliers.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a public-sector industrial site rehabilitation tender, anchoring the proposal on Live Objects for IoT data ingestion, ISO 27001 and SecNumCloud for security and sovereignty, and referencing Grand Paris Sud as a proof point for IoT-enabled environmental monitoring.
Sales	In a meeting with a public-sector environmental agency's head of remediation, say: 'Our Live Objects IoT platform can automate soil and groundwater monitoring data collection and feed compliance reports, reducing manual effort and improving accuracy — could we explore a pilot on one of your current site rehabilitation projects?'

Strategist / Innovator	Deep-dive into the EU INCITE centre's workstreams and the Hungarian/Belgian contracting authorities' procurement pipelines to map where IoT-enabled soil and groundwater monitoring could plug into compliance reporting, and brief the sales team on the two most promising public-sector segments.
------------------------	--

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
