

Deploy IoT-based environmental monitoring platforms for EU agencies to meet reporting obligations under industrial emissions regulations.

Public / Government sector × Emissions and environmental monitoring × IoT platform · OS048 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
59 is the world moving	51 can we play, can we win	HIGH 0 named in the evidence	€220m observed evidence · per year	NOW budgeted procurement within 1...	L1 11 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to deploy IoT-based environmental monitoring platforms for EU agencies and public authorities, helping them meet reporting obligations under industrial emissions regulations. The need is immediate, driven by new EU regulations specifying pollutant thresholds and active public procurement in Germany and Norway. Orange can leverage its Live Objects IoT platform and sovereign cloud certifications to deliver a compliant, secure solution.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€2.6m €2.6m – €5.8m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

IoT Environmental Monitoring Platform

Orange asset Partner Customer-owned Third party / to be sourced

This diagram shows how sensor data flows from field devices through Orange's secure platform to compliance dashboards, enabling regulatory reporting.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Regulation (EU) 2024/1244 defines specific pollutants and thresholds that the largest industrial operators must report, creating a compliance-driven demand for continuous monitoring and data management. Public authorities in Germany and Norway are already tendering for environmental monitoring services, including sensor data hosting and preprocessing, and basic monitoring of environmental toxins in fresh water. This indicates a shift from periodic sampling to continuous, data-quality-assured monitoring, with procurement budgets allocated within the next year.

Sources: SIG-F0C82E295B8E ec.europa.eu 2026-03-06; SIG-1C4F366EE4AA ted.europa.eu 2026-07-09; SIG-BD20378972BA ted.europa.eu 2026-06-15

Who buys, and why now

The buyer is typically a public agency such as an environmental protection agency or a municipal data center, with the procurement officer signing the contract. The operational pain is felt by environmental compliance teams who must collect, validate, and report emissions data to meet regulatory thresholds. The trigger is an upcoming reporting deadline or a new regulation that requires more frequent or more granular data than current manual processes can provide.

Why it is hot now — every claim bound to a dated source

- EU regulations specify pollutant thresholds for industrial operators, requiring continuous monitoring and data management. [SIG-F0C82E295B8E]
- Public procurement in Germany and Norway indicates active investment in environmental monitoring services. [SIG-1C4F366EE4AA, SIG-BD20378972BA]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution using its Live Objects IoT platform as the core, combined with its AI/Data/Cloud experts and IoT experts to design and deploy sensor networks. The engagement would start with a discovery phase to map the customer's reporting obligations, then deploy sensors and connect them to Live Objects for data ingestion and preprocessing. Data would be hosted on Orange's sovereign cloud infrastructure, certified with ISO 27001, SecNumCloud, and CISPE, ensuring compliance and data sovereignty. Finally, Orange would provide dashboards and reporting tools to streamline regulatory submissions.

Why Orange can win

Orange can win because it combines a proven IoT platform (Live Objects) with sovereign cloud certifications (SecNumCloud, CISPE) that are critical for public sector data. The reference from Grand Paris Sud demonstrates successful deployment in a similar municipal context. While competitors like AWS and Deutsche Telekom offer IoT platforms, Orange's unique positioning on sovereignty and its integration of AI/Data experts give it an edge in the public sector.

Competitive landscape

HIGH competitive intensity (score 8.2; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers like AWS, which offers a robust IoT platform and cloud services, and telecom peers like Deutsche Telekom/T-Systems, Telefonica Tech, and Vodafone Business, all active in the public sector. Global system integrators like NTT DATA also compete with IoT platform offerings. These competitors are strong in cloud scale and connectivity, but may lack the specific sovereign certifications that Orange holds, which are increasingly important for EU public authorities.

Competitor	Category	Position here	Basis	Evidence
------------	----------	---------------	-------	----------

AWS	Hyperscaler	sells IoT platform; competes in Cloud — also an Orange partner	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Cloud, Connectivity Solutions	structural	—
NTT DATA	Global systems integrator	sells IoT platform; competes in Cloud, Connectivity Solutions	structural	—
Proximus	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
Telefonica Tech	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Cloud, Connectivity Solutions	structural	—
Telia Company	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
Verizon Business	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
Vodafone Business	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What specific pollutants and thresholds from Regulation (EU) 2024/1244 does your agency need to report on, and what is your current data collection process?
- 2 Do you currently have any IoT sensors deployed for environmental monitoring, and if so, how is the data being managed and hosted?
- 3 What are your data sovereignty and security requirements for hosting environmental monitoring data?
- 4 Have you already issued a tender for environmental monitoring services, or are you planning one within the next 12 months?
- 5 Who is responsible for ensuring compliance with emissions reporting in your organization, and what is their biggest operational challenge?

Objections you will meet

They will say	You can answer
We already have a solution from a hyperscaler like AWS.	That's a valid point, and AWS offers a strong platform. However, our solution is built on Live Objects and hosted on sovereign infrastructure certified with SecNumCloud and CISPE, which may be required for public sector data. We can also integrate with your existing systems.
Our budget is limited for new monitoring infrastructure.	We understand budget constraints. Our solution can be phased, starting with the most critical pollutants, and we can leverage existing sensors where possible. The cost of non-compliance with new regulations could be higher in the long run.
We are concerned about data quality and reliability.	Data quality is a core focus. Our Live Objects platform includes data validation and preprocessing features, and we have experience from the Grand Paris Sud reference in ensuring reliable data streams. We can also provide service-level agreements on data availability.

Risks and unknowns

A key risk is that public procurement cycles can be long, and the customer may already have incumbent vendors. The regulatory landscape is evolving, and the specific data quality requirements for the new thresholds are not fully known. Additionally, while the evidence shows procurement activity, it does not confirm that these agencies are specifically seeking a full IoT platform versus simpler sensor procurement.

Next action, by role (FR-17)

Role	Do this next
------	--------------

Presales / Proposal	Prepare a bid brief for a European public-sector tender on environmental monitoring, differentiating our offer by combining Live Objects with our AI/Data/Cloud expertise, and referencing the Grand Paris Sud deployment as proof of our capability, while ensuring compliance with ISO 27001, SecNumCloud, and CISPE certifications.
Sales	In a conversation with the environmental monitoring program lead at a German or Norwegian public agency, say: 'We have an IoT platform, Live Objects, that can help you meet EU emissions reporting obligations by securely collecting and managing continuous monitoring data, and we have experience with public-sector deployments like Grand Paris Sud.'
Strategist / Innovator	Commission a deep-dive brief on EU industrial emissions reporting obligations to map the specific data-management and IoT requirements, and assess how Live Objects and our AI/Data/Cloud experts can be positioned against them.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
