

Cloud-based traceability and quality assurance platform for secondary plastics in automotive value chains, ensuring non-toxicity and durability compliance.

Automotive × Product traceability and digital product passport × Cloud data platform · OS058 v2 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
51 is the world moving	41 can we play, can we win	HIGH 0 named in the evidence	€160m modelled evidence · per year	LATER research and standards activi...	L2 7 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is a cloud-based traceability and quality assurance platform for secondary plastics in automotive value chains, ensuring non-toxicity and durability compliance. It targets automotive OEMs and tier-1 suppliers who need to meet upcoming digital product passport (DPP) regulations and circular economy mandates. The need is urgent because EU regulations and industry initiatives are pushing for transparent, interoperable data ecosystems across the value chain.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€180m €51.7m – €641m	€160m €45.8m – €568m	€1.2m €343k – €4.3m	modelled
Observed: tendered contract value, annualised	€10.0m	€10.0m	€75k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Automotive (EU27_2020)	6,364 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting Cloud data platform	28.2 % of enterprises (10+ employees)	observed	Eurostat · isoc_cicce_usen2 · E_CC_PDB	2025
Annual value of one engagement	€320k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	1,995 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract value is a configured assumption, not observed. Only 0 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€10.0m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 6 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Secondary Plastics Traceability Platform

■ Orange asset
 ■ Partner
 ■ Customer-owned
 ■ Third party / to be sourced

This platform connects suppliers and recycling sites to a secure cloud data platform that generates digital product passports for compliance and sustainability.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The EU's Circular Economy Action Plan (CEAP) is driving the adoption of Digital Product Passports (DPPs) for plastics, especially in complex durable products like vehicles. The EcoPlast project is developing digital solutions to ensure high quality, non-toxicity, and durability of secondary materials in the automotive plastic value chain. Research highlights the need for part-level traceability and automated compliance in end-of-life vehicle recycling, which current DPP implementations lack. The integration of DPPs with digital twins, IoT, and blockchain is emerging as a way to achieve dynamic traceability and reliability management.

Who buys, and why now

The buyer is typically the head of sustainability or the chief procurement officer at an automotive OEM or tier-1 supplier. The pain is felt by quality assurance and compliance teams who struggle to prove the non-toxicity and durability of recycled plastics in their supply chain. The trigger is often an upcoming regulatory deadline or a customer audit requiring DPP data. They need to avoid supply chain disruptions and potential fines for non-compliance.

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a cloud data platform (L3) hosted on a hyperscaler partner (Microsoft, AWS, or Google Cloud) to collect and manage DPP data across the value chain. Orange's AI/Data/Cloud experts (SUP) would build the data models and analytics for traceability and compliance checks. IoT experts (SUP) would integrate sensor data from production and recycling sites. The platform would be certified to TISAX (SUP) to meet automotive security requirements. The engagement would start with a pilot with a reference customer like Toyota (SUP) to validate the approach, then scale to full production.

Why Orange can win

Orange can win because it combines a certified cloud data platform (TISAX) with deep expertise in AI, data, and IoT, and has a strong reference in Toyota. The partnership with hyperscalers allows Orange to offer a sovereign, secure solution that integrates with existing cloud investments. However, the assets are thin: Orange does not have a pre-built DPP solution, so it would need to build from scratch, which could slow time-to-market.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Microsoft	partner	L2	partner provides the required technology	unconfirmed
AWS	partner	L2	partner provides the required technology	unconfirmed
Google Cloud	partner	L2	partner provides the required technology	unconfirmed
Cloud data platform	technology	L3	no offer path, but adjacent assets or Orange research exist	unconfirmed
TISAX	certification	SUP	certification Orange holds is required by this vertical	unconfirmed
AI / Data / Cloud experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
IoT experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Orange Group researchers	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Toyota	reference	SUP	published reference in this vertical, different use case	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.6; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers AWS, Google Cloud, and Microsoft, who offer cloud data platforms and can build similar solutions. Global system integrators like Accenture, Capgemini, DXC Technology, Infosys, and Sopra Steria also sell cloud data platforms and have strong consulting capabilities. The customer will likely compare Orange against these players, especially on price, speed, and domain expertise. Orange's differentiator is its TISAX certification and automotive-specific experience, but competitors may have more mature offerings.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Cloud data platform; competes in OX: Smart Industries — also an Orange partner	structural	—
Google Cloud	Hyperscaler	sells Cloud data platform — also an Orange partner	structural	—

Microsoft	Hyperscaler	sells Cloud data platform — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Cloud data platform; competes in OX: Smart Industries	structural	—
Capgemini	Global systems integrator	sells Cloud data platform; competes in OX: Smart Industries	structural	—
DXC Technology	Global systems integrator	sells Cloud data platform	structural	—
Infosys	Global systems integrator	sells Cloud data platform	structural	—
Sopra Steria	Global systems integrator	sells Cloud data platform	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current process for tracking the composition and quality of recycled plastics in your supply chain?
- 2 Have you received any requests from customers or regulators for digital product passport data for your vehicles?
- 3 Which of your suppliers provide data on the non-toxicity and durability of secondary plastics, and in what format?
- 4 Do you have a system in place to manage part-level traceability across your value chain, or is it fragmented?
- 5 What is your timeline for complying with upcoming DPP regulations, and what is your budget for a solution?
- 6 Are you currently using a cloud platform from AWS, Microsoft, or Google Cloud for any supply chain data?

Objections you will meet

They will say	You can answer
We already have a cloud data platform from AWS/Microsoft/Google, why do we need Orange?	That's true, you have a cloud platform, but Orange adds the automotive-specific expertise, TISAX certification, and the ability to integrate with your existing systems. We can help you build a DPP solution faster and with the necessary compliance.
The DPP regulations are not final yet, so we are waiting.	Waiting is understandable, but the direction is clear. By starting now, you can pilot with a reference customer and be ready when regulations are finalized. You'll also gain a competitive advantage in sustainability.
We have internal IT teams that can build this.	Your internal teams may be capable, but they likely lack the specific knowledge of DPP requirements and the automotive value chain. Orange brings that expertise and can complement your team, reducing risk and time-to-market.

Risks and unknowns

The main risk is regulatory uncertainty: DPP standards are still evolving, and the exact data requirements are not yet final. There is also a risk that customers may prefer to build in-house or with a hyperscaler directly, bypassing Orange. The technical challenge of integrating data from multiple suppliers and legacy systems is significant. It is not yet known whether the market will adopt a single DPP standard or multiple competing ones.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a cloud-based traceability platform for automotive plastics, leveraging Orange's TISAX certification and partnerships with Microsoft, AWS, and Google Cloud, and incorporating insights from the EcoPlast project.
Sales	In a conversation with a European automotive OEM's head of sustainability, reference Toyota's use of traceability and ask about their current approach to digital product passports for plastic components.
Strategist / Innovator	Commission a deep-dive brief on the EcoPlast project's digital solution architecture, mapping how Orange's AI/Data/Cloud experts and IoT experts could contribute to a cloud-based traceability platform for secondary plastics in automotive value chains.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
