

Data platform for managing the EU driving licence network's shared rules and operations.

Public / Government sector × Citizen service automation × Cloud data platform · OS062 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
68 is the world moving	51 can we play, can we win	HIGH 0 named in the evidence	€220m observed evidence · per year	NOW budgeted procurement within 1...	L2 10 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is a cloud data platform for the EU driving licence network, enabling member states to share and manage common rules and operational data. It targets public sector agencies responsible for driving licences, and it exists now because the EU is establishing a common set of rules for the network, requiring harmonized data management.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€1.7m €1.7m – €3.6m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

EU Driving Licence Data Platform

This diagram shows how Orange's cloud data platform supports the EU driving licence network with governance, interoperability, and sovereign infrastructure.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The EU is setting provisions on a common set of rules governing the operation of the EU driving licence network, which will require member states to harmonize their data management practices. This regulatory push is creating a need for a shared data platform. Additionally, the EU has launched a Digital Product Passport registry, indicating a broader trend toward digital registries and data sharing across the EU. Public sector procurement activity in related areas, such as data catalogs and IT support, shows that governments are actively investing in data infrastructure.

Why it is hot now — every claim bound to a dated source

- The EU is setting provisions on a common set of rules governing the operation of the EU driving licence network, requiring harmonized data management. [SIG-CF4133B557DA]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a cloud data platform, leveraging its Cloud data platform technology and AI/Data/Cloud experts. The engagement would start with a discovery phase to understand the current data landscape, followed by designing a federated data architecture that respects national sovereignty. Implementation would involve integrating existing systems, ensuring compliance with ISO 27001 and SecNumCloud certifications, and providing ongoing managed services. Orange would also bring its experience from the Grand Paris Sud reference to demonstrate large-scale public sector data projects.

Why Orange can win

Orange can win because it offers a sovereign, certified cloud data platform (ISO 27001, SecNumCloud, CISPE) that addresses the trust and sovereignty requirements of public sector clients. Its partnerships with hyperscalers (Microsoft, AWS, Google Cloud) allow it to provide best-of-breed technology while maintaining a trusted intermediary role. However, the assets are thin; Orange lacks a specific reference in driving licence networks, so the win must be based on its general public sector expertise and security certifications.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Microsoft	partner	L2	partner provides the required technology	unconfirmed
AWS	partner	L2	partner provides the required technology	unconfirmed
Google Cloud	partner	L2	partner provides the required technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.6; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers AWS, Google Cloud, and Microsoft, who offer cloud data platforms directly and are strong in scalability and innovation. Global system integrators like Accenture, Capgemini, DXC Technology, Infosys, and Sopra Steria are also active in the public sector and can deliver similar platforms with their own consulting and integration capabilities. The customer will likely compare Orange against these players on price, sovereignty, and integration experience.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Google Cloud	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Cloud data platform; competes in Cloud, EX: Employee Experience — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Cloud data platform; active in Public / Government sector; competes in Cloud	structural	—
Capgemini	Global systems integrator	sells Cloud data platform; active in Public / Government sector; competes in Cloud	structural	—
DXC Technology	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Infosys	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—

Sopra Steria	Global systems integrator	sells Cloud data platform; active in Public / Government sector; competes in Cloud	structural	—
--------------	---------------------------	--	------------	---

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current approach to managing driving licence data across member states?
- 2 Have you started any initiatives to prepare for the new EU driving licence network rules?
- 3 What are your key data sovereignty and security requirements for a shared platform?
- 4 Who in your organization would be the primary stakeholder for this platform?
- 5 What is your budget and timeline for implementing a data platform?

Objections you will meet

They will say	You can answer
We already have our own national systems and don't need a shared platform.	That's true, but the new EU rules will require interoperability and common data standards. A shared platform can reduce the cost of compliance and enable cross-border services.
We are concerned about data sovereignty and security.	Orange offers ISO 27001 and SecNumCloud certified infrastructure, and we can design a federated architecture that keeps data within national borders while enabling necessary sharing.
Why not just use a hyperscaler directly?	Hyperscalers offer strong technology, but Orange adds a layer of trust and sovereignty, with certifications and experience in public sector data projects, plus we can integrate with your existing systems.

Risks and unknowns

The main risk is that the EU regulation may not mandate a single shared platform, but rather a set of interoperability standards, leaving room for multiple national solutions. There is also uncertainty about the funding and procurement timeline, as the regulation is still in early stages. Additionally, the technical complexity of integrating diverse national systems is not fully known.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief that positions our Cloud data platform with Microsoft, AWS, or Google Cloud as a foundation, leveraging the Grand Paris Sud reference and our ISO 27001 and SecNumCloud certifications to address the EU's shared rules and operations, and outline how our Digital experts would support implementation.
Sales	In a conversation with a European public-sector authority responsible for driving licence administration, open with: 'We've been tracking the EU's move toward a common set of rules for the driving licence network, and we believe our cloud data platform—backed by ISO 27001 and SecNumCloud certifications—could help you manage the harmonized data operations securely.'
Strategist / Innovator	Commission a deep-dive brief on the EU driving licence network's data harmonization requirements, mapping our Cloud data platform and AI/Data experts against the stated provisions, and identifying which Orange Group researchers could contribute to a compliant reference architecture.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: `who_buys_and_why` (named entities that were never supplied: Statens vegvesen); diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
