

EU grid connection code revision drives need for automated compliance reporting platforms in energy utilities.

Energy × Regulatory compliance and reporting × Cloud data platform · OS063 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
70 is the world moving	59 can we play, can we win	HIGH 0 named in the evidence	€120m observed evidence · per year	NOW budgeted procurement within 1...	L1 14 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 3.0 published reference(s) in Energy, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

The EU's revision of the Network Code on Requirements for Grid Connection of Generators is forcing energy utilities to overhaul how they prove grid compliance. This opportunity is a cloud-based compliance reporting platform that automates the collection, validation, and submission of grid connection data. It exists now because the regulatory change is active and utilities are already procuring new grid management information systems.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€146m €32.6m – €1.8bn	€120m €26.8m – €1.5bn	€3.4m €751k – €42.6m	observed
Observed: tendered contract value, annualised	€172m €172m – €460m	€172m €172m – €460m	€4.8m €4.8m – €12.9m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Energy (EU27_2020)	5,796 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Cloud data platform	36.3 % of enterprises (10+ employees)	observed	Eurostat · isoc_cicce_usen2 · E_CC_PDB	2025
Annual value of one engagement	€299k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-07
Size-weighted buyer base	1,341 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

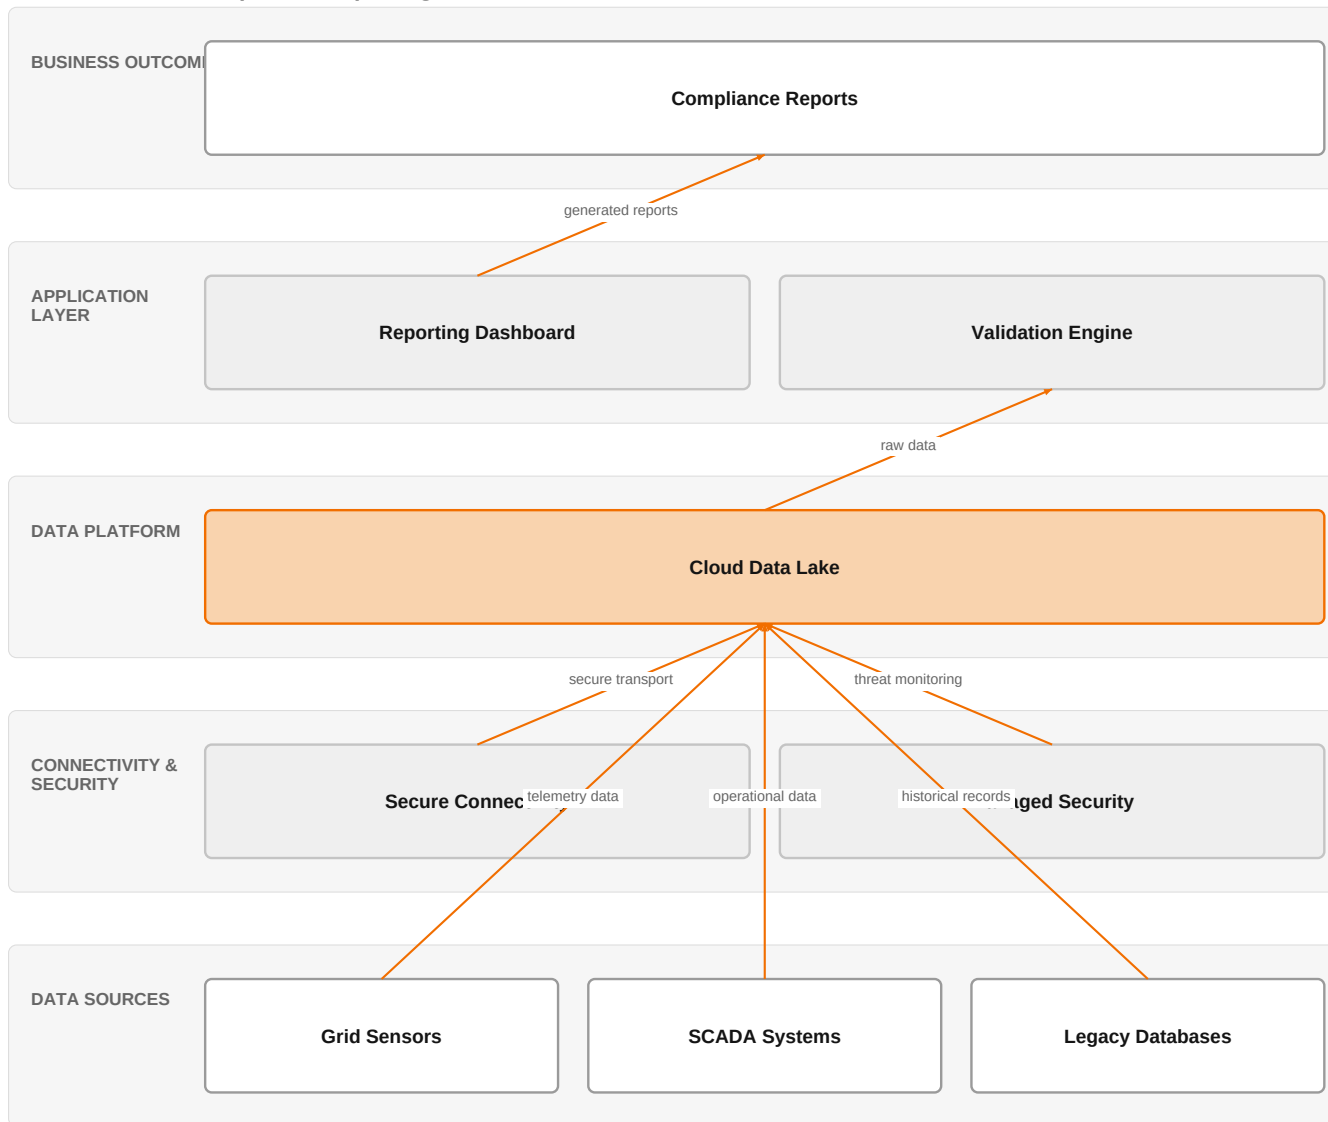

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€172m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-07
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 21 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Automated Grid Compliance Reporting Platform

■ Orange asset
 ■ Partner
 ■ Customer-owned
 ■ Third party / to be sourced

This platform automates the flow from grid data sources to compliance reports, secured and validated at every step.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The EU is revising the Network Code on Requirements for Grid Connection of Generators, a direct regulatory change that alters compliance obligations for generators and grid operators. In parallel, a French distribution network operator has issued a tender for a comprehensive information system covering grid management, supplier, and producer functions, indicating immediate procurement activity. The broader market shows a wave of energy-related tenders across Germany, Italy, Belgium, and France for electricity supply, infrastructure, and energy services, reflecting a sector under transformation.

Sources: SIG-A8CE3660ACBA ec.europa.eu 2026-07-08; SIG-C4586BCEF111 boamp.fr 2026-08-02; SIG-0A44F9A073C2 ted.europa.eu 2026-08-05; SIG-50208C14443E ted.europa.eu 2026-08-05; SIG-FC4FCB6FF0CC ted.europa.eu 2026-08-05; SIG-6F2E34F13EA5 ted.europa.eu 2026-07-22

Who buys, and why now

The head of grid operations or the chief technology officer at a distribution system operator (DSO) or transmission system operator (TSO) signs the contract. The pain is felt by the compliance team, which must manually compile grid connection data from multiple sources to meet the revised code. The trigger is an upcoming audit or a new connection request that exposes the inadequacy of current reporting processes.

Why it is hot now — every claim bound to a dated source

- Revision of the Network Code on Requirements for Grid Connection of Generators is a regulatory change affecting energy utilities. [SIG-A8CE3660ACBA]
- A French energy distribution network operator has a buying signal for a comprehensive information system covering grid management, supplier and producer functions. [SIG-C4586BCEF111]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a cloud-based compliance reporting platform using its AI/Data/Cloud experts and IoT experts to design and deploy the solution. The platform would run on a hyperscaler partner's cloud (e.g., Microsoft, AWS, or Google Cloud) and be secured with Orange Cyberdefense managed services, leveraging ISO 27001 and SecNumCloud certifications. The engagement would start with a discovery phase to map current data sources, then build a data pipeline to ingest grid connection data, apply validation rules, and generate automated compliance reports for submission to regulators.

Why Orange can win

Orange can win because it combines deep expertise in AI, data, and cloud with certified security (ISO 27001, SecNumCloud) and managed security services from Orange Cyberdefense. This is particularly relevant given the new EU cybersecurity network code for cross-border electricity flows. Orange's ability to orchestrate hyperscaler partners while providing sovereign, certified infrastructure is a differentiator. However, the asset list is thin on energy-specific domain expertise, so Orange must partner or build that capability.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L1	offer addresses the use case but not this technology	unconfirmed
Microsoft	partner	L2	partner provides the required technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.6; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include hyperscalers AWS, Google Cloud, and Microsoft, who offer cloud data platforms and are also Orange partners. Global system integrators Accenture, Capgemini, DXC Technology, Infosys, and Sopra Steria also sell cloud data platforms, with Capgemini active in Energy. The customer will compare Orange's offering against these players, who may have pre-existing relationships and deeper energy vertical expertise. Orange's edge is its security certifications and managed services, but it must differentiate on compliance-specific features.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Google Cloud	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Capgemini	Global systems integrator	sells Cloud data platform; active in Energy; competes in Cloud	structural	—
DXC Technology	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Infosys	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Sopra Steria	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 How do you currently generate your grid connection compliance reports, and how many person-hours does that take per month?
- 2 Which specific articles of the revised Network Code on Requirements for Grid Connection of Generators are you struggling to meet?
- 3 Do you have a centralized data repository for grid connection data, or is it scattered across multiple systems?
- 4 What is your timeline for achieving compliance with the revised code, and is there a regulatory audit scheduled?
- 5 Have you already engaged a system integrator or hyperscaler for this, and if so, what gaps remain?
- 6 What are your data sovereignty and security requirements for handling grid connection data?

Objections you will meet

They will say	You can answer
We already have a cloud data platform from AWS/Microsoft/Google.	That's true, and we work with those platforms. But our value is in the compliance-specific layer: we bring the domain expertise to map the revised network code to your data, and we wrap it with Orange Cyberdefense managed security and SecNumCloud certification, which is critical given the new cybersecurity network code.
The network code is still under revision, so we're waiting.	Waiting is reasonable, but the revision is active and utilities are already procuring new grid management systems. By starting now, you can have the platform ready when the final requirements land, avoiding a last-minute scramble. We can design the platform to be flexible to accommodate changes.
We have internal IT teams that can build this.	Your teams are likely stretched, and this requires specialized knowledge of both the regulatory code and data integration. We bring certified security and managed services that are hard to replicate in-house, and we can complement your team rather than replace it.

Risks and unknowns

The main risk is that the revised network code is still under revision, so the exact compliance requirements are not yet final, which could stall the project. Another risk is that utilities may prefer to build in-house or use a hyperscaler's native compliance tools. Unknowns include the specific data formats required by regulators and the willingness of utilities to adopt a third-party platform. Orange must also prove it can deliver energy-specific domain expertise, which is not yet evident from the supplied assets.

Next action, by role (FR-17)

Role	Do this next
------	--------------

Presales / Proposal	Prepare a bid brief for a French energy distribution network operator that differentiates our offer by combining Orange Cyberdefense managed services with Microsoft, AWS, and Google Cloud capabilities, and include a compliance reporting demo tailored to grid management.
Sales	In a meeting with a French energy distribution network operator's IT director, say: 'We can help you automate compliance reporting for the revised grid connection code using our cloud data platform and managed services, backed by ISO 27001 and SecNumCloud certifications.'
Strategist / Innovator	Commission a deep-dive brief on the EU grid connection code revision to map which compliance-reporting capabilities our AI/Data/Cloud experts can productize for energy utilities within the next quarter.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (4 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
