

Deploy a cloud-based emissions data management platform for airlines to collect, verify, and report CORSIA-eligible fuel and emissions data for EU ETS compliance in 2026.

Transportation and Logistics × Regulatory compliance and reporting × Cloud data platform · OS064 v2 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
71 is the world moving	52 can we play, can we win	HIGH 0 named in the evidence	€1.3bn observed evidence · per year	NEXT regulation adopted or propose...	L1 10 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

We can deploy a cloud-based emissions data management platform that helps airlines collect, verify, and report CORSIA-eligible fuel and emissions data for EU ETS compliance in 2026. This opportunity targets airlines operating routes to and from states applying CORSIA, who face new compliance obligations. The platform leverages our AI, data, and cloud expertise to automate data collection and reporting, reducing manual effort and ensuring accuracy.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€2.1bn €666m – €10.3bn	€1.3bn €415m – €6.4bn	€16.1m €5.0m – €77.0m	observed
Observed: tendered contract value, annualised	€115m	€115m	€1.4m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Transportation and Logistics (EU27_2020)	113,199 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting Cloud data platform	18.4 % of enterprises (10+ employees)	observed	Eurostat · isoc_cicce_usen2 · E_CC_PDB	2025
Annual value of one engagement	€792k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-26..2026-08-05
Size-weighted buyer base	14,748 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€115m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-26..2026-08-05
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 8 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Emissions Data Management Platform

This platform automates the collection, verification, and reporting of emissions data, ensuring compliance with CORSIA and EU ETS.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Regulatory changes are driving the need for this platform. The EU has identified states applying CORSIA in 2026 for ETS purposes, creating new compliance obligations for airlines. Additionally, amendments to the Rail Capacity Regulation annex on temporary capacity restrictions signal broader regulatory shifts in transport. These changes require airlines to collect and report emissions data more rigorously, making a cloud-based platform essential.

Sources: SIG-F93EC87965BF ec.europa.eu 2026-01-06; SIG-96A1E02831FF ec.europa.eu 2026-05-19

Who buys, and why now

The chief sustainability officer or head of environmental compliance signs the contract, while the operational pain is felt by the flight operations and data management teams who must manually compile fuel and emissions data from multiple sources. The trigger is the upcoming 2026 compliance deadline, which forces airlines to establish auditable reporting processes. They need to avoid penalties and demonstrate regulatory compliance.

Why it is hot now — every claim bound to a dated source

- Amendment of Rail Capacity Regulation annex on temporary capacity restrictions is a regulatory change requiring compliance. [SIG-96A1E02831FF]
- CORSIA is being applied by certain states for ETS purposes in 2026, creating compliance obligations for airlines. [SIG-F93EC87965BF]

What Orange would deliver, and why it can win

What Orange would deliver

We would assemble a solution using our AI, Data, and Cloud experts to design a data ingestion pipeline that collects flight fuel data from airline systems. We would leverage our IoT experts to integrate sensor data from aircraft if available. The platform would be hosted on a cloud infrastructure, with our Digital experts building the reporting dashboard. We would also involve our Orange Group researchers to ensure the platform meets evolving regulatory requirements. The engagement would start with a discovery phase, followed by platform design, data integration, and deployment.

Why Orange can win

Orange can win because we bring a combination of AI, data, and cloud expertise, along with deep understanding of regulatory compliance from our work in other sectors. Our ability to integrate IoT data and provide managed services through Orange Cyberdefense adds security and reliability. However, the assets are thin in terms of specific aviation domain expertise, so we must differentiate on our end-to-end integration capabilities and trusted relationship with enterprises.

Named assets behind this — each individually inspectable (LK-08)

Competitive landscape

HIGH competitive intensity (score 8.6; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Google Cloud	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Cloud data platform; competes in Cloud — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Capgemini	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
DXC Technology	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Infosys	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—
Sopra Steria	Global systems integrator	sells Cloud data platform; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar.

structural means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register

Qualifying questions for the first meeting

- 1 How are you currently collecting and reporting fuel and emissions data for CORSIA and EU ETS?
- 2 What is your current process for verifying the accuracy of emissions data before submission?
- 3 Which states are you operating flights to that are subject to CORSIA in 2026?
- 4 Do you have a dedicated team for environmental compliance, and what tools do they use?
- 5 What is your timeline for implementing a new reporting system before the 2026 deadline?
- 6 Have you already engaged with any cloud provider or integrator for this purpose?

Objections you will meet

They will say	You can answer
We already use AWS for our data needs, so why should we consider Orange?	That's a fair point. AWS is a strong partner, and we work with them too. But our value lies in bringing together AI, data, and cloud expertise with a focus on regulatory compliance, and we can integrate with your existing AWS environment while adding specialized support for emissions reporting.
We have internal IT teams that can build this.	Building in-house is possible, but it can be resource-intensive and distract from core operations. Our team has experience in similar compliance platforms and can accelerate deployment, ensuring you meet the deadline without straining your internal resources.
How do we know you understand aviation-specific regulations?	You're right to question that. While we don't have a specific aviation reference, our team has deep experience in regulatory compliance across other industries, and we are committed to working closely with your experts to ensure full compliance. We also invest in research through Orange Group researchers to stay ahead of regulatory changes.

Risks and unknowns

The main risk is that airlines may delay investment until closer to the compliance deadline, or they may choose to build in-house solutions using existing cloud providers. There is also uncertainty about the exact data formats and verification standards required by regulators, which could change. Additionally, we lack a proven reference in the aviation sector, which may make customers cautious.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a European airline's emissions data platform, outlining how Orange's AI/Data/Cloud experts and IoT experts, combined with Orange Cyberdefense managed services for security, can deliver a compliant solution, and reference Point One Navigation as a proof point of our data capabilities.
Sales	In a conversation with the head of sustainability or compliance at a European airline, say: 'With CORSIA and EU ETS requirements coming into force in 2026, we can help you build a cloud-based emissions data management platform that ensures compliance and leverages our expertise in data and cloud, along with partners like Microsoft, AWS, and Google Cloud.'
Strategist / Innovator	Commission a deep-dive brief on the CORSIA/EU ETS compliance data platform market, focusing on the regulatory timeline and the role of cloud data platforms, and identify where Orange's AI/Data/Cloud experts and IoT experts could create a differentiated offering.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: competitive_landscape (no claim survived evidence binding); diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
