

Automated pharmacy storage and retrieval robots for hospital medication logistics, as evidenced by a Polish university clinical center's procurement.

Healthcare × Warehouse and intralogistics automation × Robotics and AGV/AMR · OS092 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
69 is the world moving	26 can we play, can we win	MEDIUM 0 named in the evidence	€571k partial evidence · per year	NOW budgeted procurement within 1...	L3 13 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to supply automated pharmacy storage and retrieval robots for hospital medication logistics, targeting large hospital systems and university clinical centers. The trigger is a recent Polish university clinical center's procurement of two types of automated pharmacy robots, signaling a concrete, budgeted need in the near term. Orange Business can address this by integrating its IoT and healthcare expertise with certified, sovereign infrastructure to deliver a secure, compliant automation solution.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€1.2m €96k – €5.6m	€571k €47k – €2.7m	€714 €58 – €3k	partial
Observed: tendered contract value, annualised	€70.8m	€13.8m	€17k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Healthcare (PL)	1,750 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Robotics and AGV/AMR	0.7 % of enterprises (10+ employees)	proxy	Eurostat · isoc_eb_ain2 · E_AI_TAR	2025
Annual value of one engagement	€970k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Size-weighted buyer base	172 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	0.1 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Autonomous machines and vehicles Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes health activities; PROXY — residential care

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€70.8m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Assumed obtainable share of the serviceable market	0.1 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 7 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in

this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Automated Pharmacy Robotics Solution

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This diagram shows how Orange's IoT and security layers integrate with third-party robotics to deliver safe and efficient pharmacy operations.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Hospitals across Europe are increasingly procuring automated systems for medication storage and retrieval, as evidenced by a Polish university clinical center's tender for two types of automated pharmacy robots. This reflects a broader trend of digitalization in healthcare logistics, where efficiency and accuracy in medication management are becoming critical. Additionally, regulatory and compliance pressures, such as data protection standards for health data (e.g., HDS, SecNumCloud), are pushing hospitals to seek solutions that ensure both operational efficiency and data sovereignty.

Who buys, and why now

The primary buyer is the hospital's pharmacy director or head of logistics, who feels the pain of manual medication handling errors, inventory mismanagement, and the high cost of pharmaceutical waste. The trigger event is often a new hospital construction or renovation project, or a mandate to improve patient safety and operational efficiency. For example, the Polish university clinical center is likely responding to the need to modernize its pharmacy operations to handle a larger patient volume and reduce medication errors.

What Orange would deliver, and why it can win

What Orange would deliver

Orange Business would assemble a solution combining its IoT expertise to connect and monitor the robotic systems, healthcare domain knowledge to tailor the integration to hospital workflows, and its certified infrastructure (ISO 27001, SecNumCloud, HDS) to ensure secure data handling. The engagement would start with a consultation and site assessment, followed by the deployment of the robotics and AGV/AMR technology, and conclude with integration into the hospital's existing IT systems and ongoing support.

Why Orange can win

Orange Business can differentiate through its sovereign and certified cloud offerings (SecNumCloud, HDS) which are critical for handling sensitive health data, combined with its healthcare-specific expertise and IoT capabilities. While competitors may offer similar robotics, Orange's ability to provide a fully compliant, end-to-end solution with a strong focus on data security gives it an edge in markets with strict regulatory requirements.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator

Competitive landscape

MEDIUM competitive intensity (score 3.0; 0 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include Siemens, which has strong industrial automation and robotics expertise; Atos/Eviden and Accenture, which are global systems integrators with healthcare practices; Deutsche Telekom/T-Systems, a telecom peer with healthcare focus; OVHcloud, a sovereign cloud provider; Boldyn Networks, a network equipment vendor; Palantir, a data and AI platform; and AWS, a hyperscaler that is also an Orange partner. Each brings strengths in different areas, but Orange's combination of sovereign cloud, healthcare expertise, and IoT capabilities is distinctive.

Sources: SIG-8C12C0E62719 ted.europa.eu 2026-06-24

Competitor	Category	Position here	Basis	Evidence
Siemens	Industrial / OT specialist	sells Robotics and AGV/AMR; competes in OX: Smart Industries	structural	—
Atos / Eviden	Global systems integrator	active in Healthcare	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	active in Healthcare; competes in OX: Smart Industries	structural	—
OVHcloud	Sovereign cloud provider	active in Healthcare	structural	—
Boldyn Networks	Network equipment vendor	active in Healthcare	structural	—

Palantir	Data and AI platform	active in Healthcare; competes in OX: Smart Industries	structural	—
AWS	Hyperscaler	competes in OX: Smart Industries — also an Orange partner	structural	—
Accenture	Global systems integrator	competes in OX: Smart Industries	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current medication storage and retrieval process, and what are the main pain points (e.g., error rates, labor costs, space constraints)?
- 2 Are you planning any new construction or renovation of your pharmacy or central supply area in the next 12-18 months?
- 3 What are your key drivers for automation: patient safety, operational efficiency, or regulatory compliance?
- 4 How do you currently manage data security and compliance for medication-related data? Do you have any specific requirements for data residency or sovereignty?
- 5 Have you already issued a tender or request for proposal for automated pharmacy robots, or are you in the early exploration phase?
- 6 What is your budget range for such an investment, and what is the expected payback period?

Objections you will meet

They will say	You can answer
We already have a preferred vendor for pharmacy automation.	That's understandable. However, our value proposition goes beyond the robots themselves. We bring a certified, sovereign infrastructure that ensures your medication data is handled in full compliance with health data regulations, which is a growing concern for many hospitals. We can also integrate the robots with your existing systems more seamlessly thanks to our healthcare expertise.
The upfront cost of robotic systems is too high.	We recognize the capital investment is significant. But consider the long-term savings from reduced medication errors, lower labor costs, and improved inventory management. We can also explore flexible financing models or phasing the deployment to align with your budget cycles.
We are concerned about the complexity of integrating robots with our current IT systems.	Integration is a core strength of Orange Business. We have deep experience in healthcare IT and IoT, and we can provide a dedicated team to manage the integration, minimizing disruption to your operations. We also offer ongoing support to ensure smooth operation.

Risks and unknowns

Key risks include the high capital expenditure required for robotic systems, which may face budget constraints in public hospitals. There is also uncertainty about the integration complexity with existing hospital IT systems and the need for staff training. Additionally, the regulatory landscape for health data is evolving, and while Orange's certifications are strong, future changes could impact compliance requirements.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for the Polish university clinical center that maps our IoT and healthcare capabilities to their pharmacy robot procurement, highlighting ISO 27001, SecNumCloud, and HDS compliance, and citing Bliksund and MicroPort CardioFlow as relevant references.
Sales	Reach out to the Polish university clinical center's head of pharmacy or logistics to discuss how Orange can secure and connect their automated pharmacy storage robots, referencing our HDS certification and healthcare expertise.
Strategist / Innovator	Deep-dive brief on how Orange's IoT and Healthcare experts can wrap secure connectivity (ISO 27001, SecNumCloud, HDS) around pharmacy robotics for a Polish university clinical center, using the Bliksund and MicroPort CardioFlow references as proof points.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
