

AI-integrated robotic systems for automating inbound warehouse logistics, leveraging physical AI and collaborative robotics to streamline receiving and putaway processes.

Manufacturing × Warehouse and intralogistics automation × Robotics and AGV/AMR · OS095 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
79 is the world moving	36 can we play, can we win	MEDIUM 0 named in the evidence	€150m observed evidence · per year	NOW budgeted procurement within 1...	L3 20 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is about deploying AI-integrated robotic systems to automate inbound warehouse logistics, specifically receiving and putaway. It targets manufacturers and logistics providers who are under pressure to improve operational continuity and efficiency. The timing is right because the market is seeing integrated physical AI solutions from robotics vendors, and the warehouse automation market is moving toward a robotics-as-a-service model.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€209m €37.6m – €1.1bn	€150m €27.0m – €806m	€187k €34k – €1.0m	observed
Observed: tendered contract value, annualised	€20.9m €20.9m – €56.6m	€20.9m €20.9m – €56.6m	€26k €26k – €71k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Manufacturing (EU27_2020)	238,122 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Robotics and AGV/AMR	1.6 % of enterprises (10+ employees)	observed	Eurostat · isoc_eb_ain2 · E_AI_TAR	2025
Annual value of one engagement	€337k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Size-weighted buyer base	39,220 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	0.1 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€20.9m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	0.1 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 14 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly

in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

AI-Integrated Inbound Logistics Automation

This diagram shows how Orange integrates IoT connectivity, security, and analytics with partner robotics to automate inbound logistics, delivering operational continuity and cost efficiency.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The warehouse automation market is shifting from isolated robotic pilots to integrated, AI-driven systems that handle entire inbound logistics processes. Recent integrations between robotics vendors demonstrate that physical AI is now mature enough to automate receiving and putaway end-to-end. Additionally, the market is moving toward a robotics-as-a-service model, lowering the barrier to adoption for logistics providers. A major manufacturer is structuring a dedicated warehouse automation group, signaling that this is becoming a strategic priority.

Who buys, and why now

The buyer is typically the head of operations or supply chain director at a manufacturing or logistics company. The pain is operational: inbound receiving and putaway are labor-intensive, error-prone, and create bottlenecks that disrupt downstream processes. The trigger is often a peak-season failure, a labor shortage, or a strategic initiative to improve

operational continuity across large warehouse footprints. They are looking for a solution that can scale beyond pilots and integrate with existing systems.

- The warehouse automation market is moving towards a robotics-as-a-service model. [SIG-0D9638D655F9]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble an integrated solution leveraging its IoT experts and Orange Group researchers to design and deploy a physical AI system for inbound logistics. The engagement would start with a discovery and architecture phase, using Orange's IoT expertise to assess the warehouse environment and data flows. Then, Orange would integrate robotics and AGV/AMR technology (L3) with the customer's existing systems, ensuring security and compliance through ISO 27001 and TISAX certifications. Finally, Orange would provide ongoing optimization and support, drawing on its experience from reference deployments with manufacturers like Colgate-Palmolive and Mondelez International.

Why Orange can win

Orange can win by combining its IoT expertise and research capabilities with its certified security and compliance frameworks (ISO 27001, TISAX). This is particularly relevant for manufacturers with strict security requirements. Orange also brings proven experience from reference customers in manufacturing, which builds credibility. However, Orange's portfolio in robotics is thin—it does not have its own robotics hardware or software, so it would need to partner with specialized vendors. This is a gap that must be acknowledged.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Robotics and AGV/AMR	technology	L3	no offer path, but adjacent assets or Orange research exist	unconfirmed
ISO 27001	certification	SUP	certification Orange holds is required by this vertical	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 3.6; 0 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include industrial/OT specialists like Siemens, Bosch, and Honeywell, who have deep domain expertise in automation and can offer integrated hardware-software solutions. Global systems integrators like Accenture and Capgemini bring strong implementation capabilities and can orchestrate complex deployments. Telecom peers Deutsche Telekom/T-Systems and Vodafone Business are also active in manufacturing and may compete on connectivity and IoT platforms. Sovereign cloud provider Dassault Systemes/3DS Outscale could appeal to customers with strict data sovereignty requirements. The customer will compare Orange's ability to integrate and secure the solution against these players' domain depth and scale.

Competitor	Category	Position here	Basis	Evidence
Siemens	Industrial / OT specialist	sells Robotics and AGV/AMR; active in Manufacturing; competes in OX: Smart Industries	structural	—
Accenture	Global systems integrator	active in Manufacturing; competes in OX: Smart Industries	structural	—
Capgemini	Global systems integrator	active in Manufacturing; competes in OX: Smart Industries	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	active in Manufacturing; competes in OX: Smart Industries	structural	—
Vodafone Business	Telecom operator peer	active in Manufacturing; competes in OX: Smart Industries	structural	—
Bosch	Industrial / OT specialist	active in Manufacturing; competes in OX: Smart Industries	structural	—
Dassault Systemes / 3DS Outscale	Sovereign cloud provider	active in Manufacturing; competes in OX: Smart Industries	structural	—
Honeywell	Industrial / OT specialist	active in Manufacturing; competes in OX: Smart Industries	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current inbound receiving and putaway process, and where are the biggest bottlenecks?
- 2 Have you already piloted any robotic or AI-based automation in your warehouse? If so, what were the results?
- 3 What are your top operational priorities for the next 12 months: cost reduction, throughput, or labor stability?
- 4 How do you currently handle peak season surges in inbound volume?
- 5 What are your security and compliance requirements for warehouse systems, and do you have any data sovereignty constraints?
- 6 Are you open to a robotics-as-a-service model, or do you prefer capital expenditure?

Objections you will meet

They will say	You can answer
We've tried automation before and it didn't scale beyond a pilot.	That's a common challenge. Many pilots fail because they are isolated and not integrated with the broader warehouse ecosystem. Our approach focuses on end-to-end integration, using IoT expertise to connect the robotic system with your existing infrastructure, and we design for scale from day one.
We are concerned about the security of connected robotic systems.	Security is a valid concern. Orange brings ISO 27001 and TISAX certifications, and our IoT experts ensure that the entire solution is designed with security in mind, from the edge devices to the cloud. We also have experience deploying secure solutions for manufacturers like Colgate-Palmolive and Mondelez International.

Why should we choose Orange over a specialized robotics vendor?	Specialized vendors have great technology, but they often lack the integration and security expertise needed for a complex manufacturing environment. Orange combines IoT expertise, research capabilities, and certified security frameworks to deliver a holistic solution. We also have a track record of working with large manufacturers, so we understand the operational realities.
---	--

Risks and unknowns

The main risk is that Orange lacks proprietary robotics technology, making it dependent on partners and potentially less competitive on cost or performance. There is also uncertainty about the maturity of physical AI for complex inbound logistics tasks, as many deployments are still in pilot phase. Finally, the customer's willingness to adopt a robotics-as-a-service model is not guaranteed, and integration with legacy warehouse management systems could be complex.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Bid brief for a manufacturing prospect: assemble a proposal that pairs Orange's ISO 27001 and TISAX certifications with the Robotics and AGV/AMR technology, using Saint-Gobain Glass, Skytale, and Everise as proof points of cross-industry delivery.
Sales	In a meeting with a manufacturing logistics director, say: 'We've helped global manufacturers like Colgate-Palmolive and Mondelez International with secure, compliant IoT solutions; how are you approaching the shift to robotics-as-a-service for inbound logistics?'
Strategist / Innovator	Deep-dive brief on how Orange's IoT experts and Group researchers can differentiate a robotics-as-a-service offer for warehouse automation, anchored on the Colgate-Palmolive and Mondelez International references.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
