

Extend zero trust to non-human and agentic identities in financial services, leveraging integrations like Zscaler to secure machine identities and automated workflows.

Finance, Banking and Insurance × Identity and access management × Zero trust architecture · OS099 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
72 is the world moving	74 can we play, can we win	HIGH 4 named in the evidence	€311m modelled evidence · per year	NEXT pilots published no volume pr...	L0 18 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 4.0 published reference(s) in Finance, Banking and Insurance, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity extends zero trust security to non-human and agentic identities in financial services, using integrations like Zscaler to secure machine identities and automated workflows. It targets CISOs and identity teams in banks and insurers who are expanding AI-driven automation and need to close identity gaps. The need is urgent as unified identity security gains ground amid AI threats.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€381m €68.6m – €1.8bn	€311m €55.9m – €1.5bn	€18.6m €3.4m – €89.7m	modelled
Observed: tendered contract value, annualised	€31.5m	€31.5m	€1.9m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Finance, Banking and Insurance (EU27_2020)	11,116 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting Zero trust architecture	65.4 % of enterprises (10+ employees)	proxy	Eurostat · isoc_cisce_ran2 · E_SECMNAC	2024
Annual value of one engagement	€240k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	2,426 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Network access control Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract value is a configured assumption, not observed. Only 4 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 3 of 4 declared geographies are outside the European reference data (ID, IN, US); the estimate covers the European footprint only. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes the financial sector; PROXY — auxiliary financial activities; PROXY — insurance and pension funding

Observed: tendered contract value, annualised

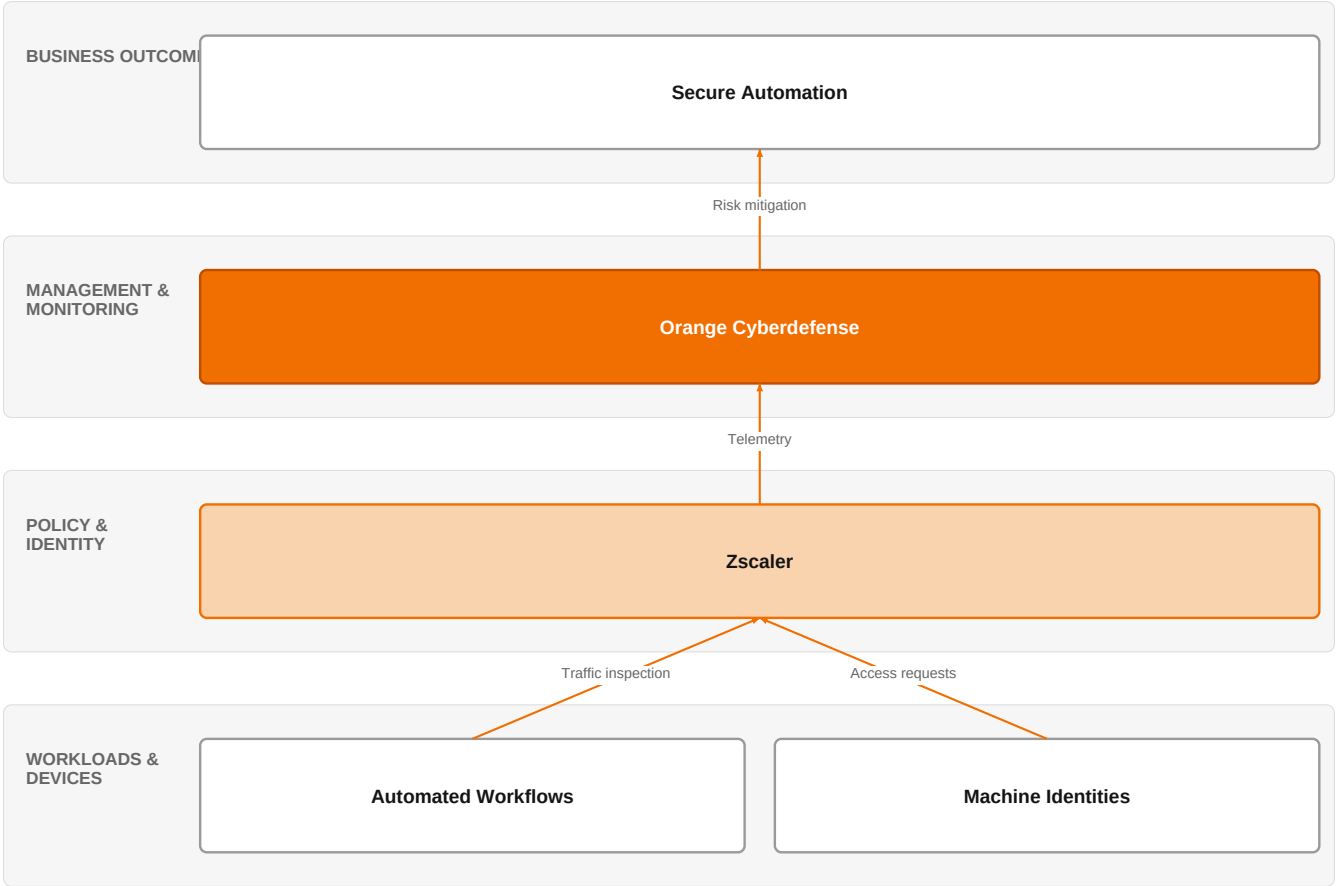

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€31.5m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05

Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a
--	--------------	------------	---------------------------------------	----------------

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 4 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 3 of 4 declared geographies are outside the European reference data (ID, IN, US); the estimate covers the European footprint only.

The solution, in one picture

Zero Trust for Machine Identities

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This diagram shows how Orange Cyberdefense manages Zscaler to secure machine identities and automated workflows, ensuring business automation is protected.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Zero trust is evolving from human-centric identity to covering non-human and agentic identities, with new integrations emerging from vendors like Oasis Security and Saviynt with Zscaler. Machine identity management is now a key part of federal zero trust strategies, and unified identity security is gaining ground amid AI threats. Indian enterprises are scaling AI-led security, but identity gaps persist, highlighting a market-wide challenge.

Who buys, and why now

The Chief Information Security Officer (CISO) signs, but the identity and access management (IAM) team feels the pain daily as they struggle to manage machine identities and service accounts. The trigger is often an audit finding or a security incident involving an automated workflow, or the rollout of AI agents that require new identity controls. They act when they realize their current zero trust program does not cover non-human identities, leaving critical gaps.

Why it is hot now — every claim bound to a dated source

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a zero trust extension for non-human identities using Orange Cyberdefense managed services, leveraging cybersecurity experts and defense and security experts. The engagement starts with an assessment of the customer's current identity landscape, then designs and deploys policies for machine identities, integrating with Zscaler as a partner. Orange Cyberdefense managed services would monitor and manage the solution, backed by ISO 27001 and SOC 2 Type II certifications.

Why Orange can win

Orange can win by combining its managed security services with deep expertise in defense and security, offering a sovereign, certified approach (ISO 27001, SOC 2 Type II) that appeals to financial institutions. The partnership with Zscaler allows Orange to leverage a leading zero trust platform while adding its own managed service layer. However, the assets are thin; Orange does not have a proprietary machine identity product, so the differentiation must come from service quality and trust.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L0	offer addresses the use case AND provides the technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 7.9; 4 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include Zscaler and Palo Alto Networks, both security specialists and Orange partners, who sell zero trust architecture directly. IBM, a global systems integrator, is active in finance and competes in cybersecurity. Microsoft, a hyperscaler, is also named in the evidence. These vendors will frame the comparison around their own platforms, but

Orange can counter with its managed services and sovereign credentials.

Competitor	Category	Position here	Basis	Evidence
Palo Alto Networks	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	evidenced	SIG-10E1BC61FB2F
Zscaler	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	evidenced	SIG-052B96826399, SIG-932AAFBEDA4B, SIG-D167D67E49C4
IBM	Global systems integrator	active in Finance, Banking and Insurance; competes in Cybersecurity	evidenced	SIG-686BD5025342
Microsoft	Hyperscaler	named in this topic's evidence — also an Orange partner	evidenced	SIG-333EF44491DD
CrowdStrike	Security specialist	sells Zero trust architecture; competes in Cybersecurity	structural	—
Fortinet	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	structural	—
Cisco	Network equipment vendor	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	structural	—
Bechtle	Regional integrator or reseller	sells Zero trust architecture	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 How are you currently managing machine identities and service accounts in your automated workflows?
- 2 Have you experienced any security incidents or audit findings related to non-human identities in the past year?
- 3 Are you planning to deploy AI agents or automation that will require new identity controls?
- 4 What is your current zero trust architecture, and does it cover non-human identities?
- 5 Who in your organization is responsible for identity security, and how do they coordinate with your security operations team?

Objections you will meet

They will say	You can answer
We already use Zscaler for zero trust; why do we need Orange?	That's a fair point. Zscaler provides excellent technology, but Orange adds a managed service layer with certified processes (ISO 27001, SOC 2) and deep expertise in defense and security, which can reduce your operational burden and ensure compliance.
We don't have a problem with machine identities right now.	Many organizations don't realize the risk until an audit or incident. With the rise of AI agents, the attack surface is expanding. A proactive assessment can reveal gaps you might not see.
This seems like a niche concern; we have bigger priorities.	It's true that human identity is a priority, but non-human identities are often overlooked and can be a critical vulnerability. As you scale automation, this becomes a business continuity issue, not just a security one.

Risks and unknowns

The main risk is that customers may prefer to buy directly from Zscaler or Palo Alto Networks, bypassing Orange. There is also uncertainty about the maturity of agentic identity standards and whether financial regulators will mandate specific controls. The lack of a proprietary Orange product for machine identity means Orange must rely on partnerships, which could be seen as less integrated.

Next action, by role (FR-17)

Role	Do this next
------	--------------

Presales / Proposal	Prepare a bid brief for a financial services client that differentiates our approach by combining Orange Cyberdefense managed services with Zscaler integration, leveraging our certifications (ISO 27001, SOC 2 Type II, CISPE) and referencing Banqsoft and Stø as proof points for securing non-human identities in automated environments.
Sales	In a conversation with a financial services CISO, say: 'We see zero trust now needs to cover machine and agent identities, not just people. Our managed security services, backed by ISO 27001 and SOC 2 Type II, can help you extend that coverage, and we can integrate with platforms like Zscaler to secure your automated workflows.'
Strategist / Innovator	Commission a deep-dive brief on extending zero trust to non-human and agentic identities in financial services, mapping our ISO 27001, SOC 2 Type II, and CISPE certifications and Orange Cyberdefense managed services against the integration patterns of Zscaler, Palo Alto Networks, and Fortinet, and using Banqsoft and Stø as reference points to identify where we can invest in capability building.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.
