

IoT-enabled panic alarm systems for the Irish Courts Service to enhance security and worker safety.

Public / Government sector × Worker safety monitoring × IoT platform · OS101 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
52 is the world moving	50 can we play, can we win	HIGH 0 named in the evidence	€0 observed evidence · per year	NOW budgeted procurement within 1...	L1 6 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€0	€0	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Secure Panic Alarm Solution for Courts

This solution ensures court staff safety through a secure, managed panic alarm system built on Orange's private mobile network and cybersecurity expertise.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Why it is hot now — every claim bound to a dated source

- The Courts Service of Ireland seeks a framework for supply, installation, monitoring and maintenance of panic alarms, indicating a need for worker safety and security. [SIG-FFE82C5C3C85]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution based on its private mobile networks for reliable, secure connectivity, integrated with IoT devices for panic alarms. The engagement would start with a security assessment using Orange's cybersecurity experts, followed by design and deployment of the private network and IoT sensors. Orange would provide ongoing monitoring and maintenance, leveraging its IoT experts and defense and security experts. The solution would be hosted on sovereign, certified infrastructure (ISO 27001, SecNumCloud, CISPE) to meet public sector trust requirements. The reference from Grand Paris Sud demonstrates Orange's capability in similar public sector IoT deployments.

Why Orange can win

Orange can win because it offers a unique combination of private mobile networks, cybersecurity expertise, and sovereign cloud certifications (SecNumCloud, CISPE) that are critical for public sector trust. The Grand Paris Sud reference provides proof of delivery in a similar context. However, the assets are thin: there is no specific panic alarm product or public safety vertical reference, so Orange would need to partner for hardware. The competitive intensity is high, with many telecom peers and hyperscalers offering IoT platforms.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
-------	------	------	------------------	---------

Private mobile networks	offer	L1	offer addresses the use case but not this technology	unconfirmed

IoT experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Defense and security experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Orange Group researchers	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Grand Paris Sud	reference	SUP	published reference in this vertical, different use case	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.2; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include AWS, which offers a strong IoT platform and is also an Orange partner; Deutsche Telekom/T-Systems and Telefonica Tech, both active in the public sector and cybersecurity; NTT DATA as a global systems integrator; and other telecom peers like Proximus, Telia, Verizon, and Vodafone. Each has strengths in IoT platform capabilities, and some have public sector experience. The customer will likely compare on price, security certifications, and local presence. Orange's differentiators are its sovereign cloud offerings and cybersecurity expertise, but competitors like Telefonica Tech also have public sector credibility.

Sources: SIG-FFE82C5C3C85 ted.europa.eu 2026-08-04

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells IoT platform — also an Orange partner	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Cybersecurity	structural	—
NTT DATA	Global systems integrator	sells IoT platform	structural	—
Proximus	Telecom operator peer	sells IoT platform	structural	—
Telefonica Tech	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Cybersecurity	structural	—
Telia Company	Telecom operator peer	sells IoT platform	structural	—
Verizon Business	Telecom operator peer	sells IoT platform; competes in Cybersecurity	structural	—
Vodafone Business	Telecom operator peer	sells IoT platform	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is the current panic alarm system in place, and what are its main limitations?
- 2 What specific security certifications or compliance requirements does the Courts Service mandate for this framework?
- 3 How many courthouse locations will be covered, and what is the expected number of devices?
- 4 Is there a preference for a managed service model, including monitoring and maintenance, or just supply and installation?
- 5 What is the expected timeline for award and implementation?

6 Are there any integration requirements with existing security or communication systems?

Objections you will meet

They will say	You can answer
We already have a preferred supplier for panic alarms.	That's understandable, but this tender is for a framework that includes monitoring and maintenance, not just hardware. Orange can bring a more integrated solution with private mobile networks and cybersecurity, which may offer better value and security.
Your solution seems complex; we just need simple panic buttons.	We agree that simplicity is key. Our approach uses proven IoT technology and private mobile networks to ensure reliability, but we can tailor the solution to your specific needs, keeping the user interface simple while providing robust backend security.
We are concerned about data sovereignty and security.	That's a valid concern. Orange offers sovereign cloud solutions with SecNumCloud and CISPE certifications, ensuring data remains within the EU and meets strict security standards. Our cybersecurity experts will work with you to address all requirements.
We have budget constraints.	We understand budget is a factor. Our solution is designed to be cost-effective, leveraging existing infrastructure where possible and offering flexible service models. We can work with you to find a solution that fits your budget while meeting your security needs.

Risks and unknowns

The main risk is that the tender is already published and may be at an advanced stage, limiting time to influence requirements. There is also uncertainty about the specific technical requirements for the panic alarms, such as whether they need to be wireless, integrated with existing systems, or meet specific certification standards. Additionally, the lifecycle state is 'fading', suggesting the opportunity may be closing. Orange's lack of a dedicated panic alarm product could require partnering, adding complexity.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief that maps Orange's cybersecurity and IoT experts, ISO 27001 and SecNumCloud certifications, and the Grand Paris Sud reference to the Courts Service's panic alarm framework requirements, highlighting how Orange's private mobile networks can ensure reliable, secure connectivity.
Sales	In a meeting with the Irish Courts Service's security and facilities management, say: 'Orange has deep cybersecurity and IoT expertise, and we hold ISO 27001 and SecNumCloud certifications, which are critical for public-sector safety systems. We also have a reference from Grand Paris Sud that shows our ability to deliver secure IoT solutions.'
Strategist / Innovator	Deep-dive brief on how Orange's cybersecurity and IoT expertise, plus ISO 27001 and SecNumCloud certifications, can be positioned for public-sector worker safety, and assess the relevance of the Grand Paris Sud reference.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: summary (named entities that were never supplied: The Courts Service); what_is_changing (named entities that were never supplied: The Courts Service); who_buys_and_why (named entities that were never supplied: The Courts Service); diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
