

Sovereign SASE for EU national government agencies to secure citizen data and meet NIS2 compliance, with a focus on cross-border interoperability.

Public / Government sector × Data sovereignty and protection × SASE and SSE · OS106 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
73 is the world moving	66 can we play, can we win	MEDIUM 0 named in the evidence	€103m observed evidence · per year	NOW budgeted procurement within 1...	L1 10 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

Sovereign SASE for EU national government agencies to secure citizen data and meet NIS2 compliance, with a focus on cross-border interoperability. This opportunity exists now because Europe's first fully sovereign SASE has been activated, giving EU enterprises a path to full digital sovereignty, and because public sector buyers are actively procuring data network management and security services.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€103m €103m – €196m	€103m €103m – €196m	€2.9m €2.9m – €5.5m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€103m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-06
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 19 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Sovereign SASE for Government

This diagram shows how Orange's sovereign SASE integrates secure connectivity, cloud, and managed security to deliver compliant citizen services.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The market has shifted with the activation of Europe's first fully sovereign SASE, which gives EU enterprises a path to full digital sovereignty. Public sector entities are actively procuring data network management and support services, as seen in a German tender for a state data network operations center. Additionally, there is a growing emphasis on digital traceability in data spaces, which is relevant for government data sharing and citizen data protection.

Who buys, and why now

The buyer is typically a national government agency's Chief Information Security Officer (CISO) or Head of Digital Infrastructure, who feels the pain of securing citizen data across distributed sites while meeting NIS2 compliance. The trigger is often a new regulatory mandate or a high-profile breach, prompting them to seek a sovereign, compliant networking and security solution.

Why it is hot now — every claim bound to a dated source

- Europe's first fully sovereign SASE has been activated, giving EU enterprises a path to full digital sovereignty.

[SIG-13F91477AC41]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a sovereign SASE solution using Flexible SD-WAN for secure connectivity, Cloud Avenue / Ready SecNumCloud for sovereign cloud hosting, and Orange Cyberdefense managed services for 24/7 monitoring. The

engagement would start with a security assessment, then deploy SD-WAN and cloud security, and finally integrate with existing infrastructure, leveraging certifications like ISO 27001 and SecNumCloud.

Why Orange can win

Orange can win because it offers a unique combination of sovereign cloud (Cloud Avenue / Ready SecNumCloud) with SecNumCloud certification, a global SD-WAN offering, and managed security services from Orange Cyberdefense. The ability to provide a fully integrated, sovereign solution is a differentiator, especially for government clients requiring high assurance.

Competitive landscape

MEDIUM competitive intensity (score 7.0; 0 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include telecom operators like BT Business, Lumen Technologies, and Verizon Business, who offer SASE and SSE but may lack sovereign cloud options. Security specialists like Fortinet, Palo Alto Networks, and Zscaler are strong in security technology but may not provide end-to-end managed services. Cisco offers strong networking but less focus on sovereign cloud. Nomios, as a regional integrator, may offer flexibility but lacks Orange's scale and certifications.

Qualifying questions for the first meeting

- 1 What is your current network architecture and how are you handling remote access and security for citizen-facing services?
- 2 Have you already assessed your compliance with NIS2, and what gaps have you identified?
- 3 Do you have a requirement for data residency within a specific EU country or region?
- 4 How do you currently manage cross-border data flows with other EU agencies?
- 5 What is your timeline for upgrading your security and networking infrastructure?

Objections you will meet

They will say	You can answer
We already have a SASE solution from a major vendor.	That's true, many organizations have adopted SASE. However, our sovereign SASE is built on SecNumCloud-certified infrastructure and integrates with Orange Cyberdefense managed services, offering a level of sovereignty and assurance that may not be available from other vendors.
We are concerned about the cost of migrating to a new solution.	Cost is a valid concern. Our solution is designed to leverage existing investments where possible, and the long-term benefits of improved security and compliance often outweigh the initial migration costs.
We are not sure if sovereign SASE is mature enough for our needs.	We understand the concern. However, with the recent activation of Europe's first fully sovereign SASE, the technology is proven and ready for enterprise adoption. We can provide references and a proof of concept to demonstrate its capabilities.

Risks and unknowns

The main risk is that the customer may already have a preferred security vendor or may be hesitant to adopt a new SASE architecture. There is also uncertainty about the specific NIS2 requirements for cross-border interoperability and how they will be enforced. Additionally, the sovereign SASE market is nascent, and the customer may be cautious about the maturity of the solution.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a European national government agency, differentiating our sovereign SASE by combining Flexible SD-WAN, Cloud Avenue / Ready SecNumCloud, and Orange Cyberdefense managed services, and referencing Grand Paris Sud as a proof point for secure digital transformation.
Sales	In a meeting with the head of IT security at a European national government agency, say: 'We can help you meet NIS2 compliance with a sovereign SASE solution that keeps your citizen data on European soil, leveraging our SecNumCloud-certified cloud and our partnership with Zscaler to ensure secure access from anywhere.'
Strategist / Innovator	Deep-dive brief on the feasibility of a sovereign SASE offer built on Flexible SD-WAN and Cloud Avenue / Ready SecNumCloud, leveraging Orange Cyberdefense managed services and partnerships with Palo Alto Networks, Cisco, Fortinet, and Zscaler, to determine the investment case for EU government agencies.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.
