

OT-aware threat detection and patch management for manufacturers facing industrial control system vulnerabilities.

Manufacturing × Threat detection and response × SIEM and SOAR · OS107 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
69 is the world moving	86 can we play, can we win	MEDIUM 1 named in the evidence	€5.5bn observed evidence · per year	NEXT regulation adopted or propose...	L0 13 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

We help manufacturers detect and respond to threats targeting their industrial control systems, and keep those systems patched against known vulnerabilities. This matters now because a recent advisory shows Siemens products—widely used in manufacturing—are exposed to remote code execution attacks, and OT security is becoming a board-level performance issue.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€7.7bn €797m – €60.0bn	€5.5bn €572m – €43.0bn	€332m €34.3m – €2.6bn	observed
Observed: tendered contract value, annualised	€50.5m €50.5m – €184m	€50.5m €50.5m – €184m	€3.0m €3.0m – €11.0m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Manufacturing (EU27_2020)	238,122 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting SIEM and SOAR	40.3 % of enterprises (10+ employees)	observed	Eurostat · isoc_cisce_ran2 · E_SECMSMS	2022
Annual value of one engagement	€488k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Size-weighted buyer base	39,220 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 1 of 2 declared geographies are outside the European reference data (US); the estimate covers the European footprint only.

Observed: tendered contract value, annualised

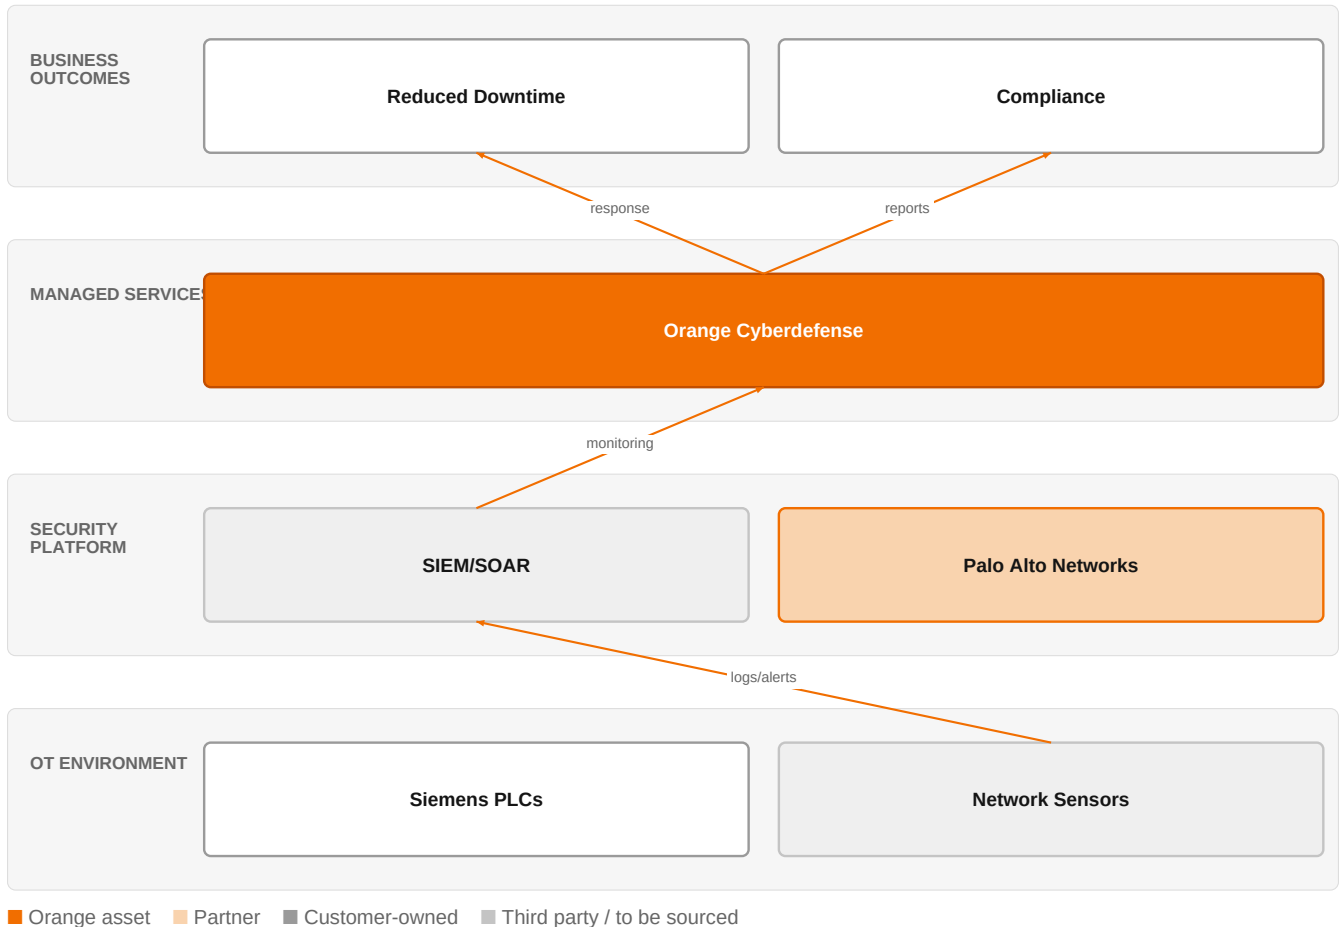

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€50.5m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 16 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a

market size. 1 of 2 declared geographies are outside the European reference data (US); the estimate covers the European footprint only.

The solution, in one picture

OT Threat Detection and Patch Management

This diagram shows how Orange Cyberdefense managed services monitor and respond to threats in the OT environment, leveraging SIEM/SOAR and partner technology to protect manufacturing operations.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Manufacturers are racing toward full digitalization, which expands the attack surface of their OT environments. Recent research highlights that cyber risk is increasingly a business risk, not just a technical one, and that the C-suite and plant floor often see different risk pictures. Academic work emphasizes the need for integrated safety and security risk assessment, as cyber incidents can propagate to physical harm. A specific advisory from the French security agency (ANSSI) reveals multiple vulnerabilities in Siemens products that allow remote code execution, denial of service, and security policy bypass—directly affecting manufacturing operations.

Sources: SIG-0B47690ED9CF bing.com 2026-07-29; SIG-FA08E847357C bing.com 2026-07-29; SIG-005CE36DA1FC Elsevier BV 2026-01-01; SIG-2199333D7866 cert.ssi.gouv.fr 2026-08-12

Who buys, and why now

The Chief Information Security Officer (CISO) or OT Security Manager signs the contract, but the plant manager and control engineers feel the pain daily—they worry about unplanned downtime and safety incidents. The trigger is often a public vulnerability disclosure (like the Siemens advisory) or a near-miss incident that forces the C-suite to realize their OT risk is not under control. They need to show auditors and insurers that they have a systematic approach to detecting and patching OT threats.

What Orange would deliver, and why it can win

What Orange would deliver

We would start with an assessment of the customer's OT environment using our Cybersecurity experts and Defense and security experts, leveraging ISO 27001 and TISAX certifications to build trust. Then we would deploy Orange Cyberdefense managed services, which include SIEM and SOAR capabilities, to monitor and respond to threats. We would integrate with Palo Alto Networks' technology for network security, and we would use Orange Group researchers to stay ahead of emerging threats. The engagement would follow a phased approach: assess, deploy, monitor, and continuously improve.

Why Orange can win

Orange can win because we bring a combination of deep cybersecurity expertise, managed services that reduce the burden on the customer's team, and a strong partner ecosystem including Palo Alto Networks. Our ISO 27001 and TISAX certifications demonstrate our commitment to security and quality. However, we must be honest: our assets are not unique—competitors also offer SIEM and SOAR. Our edge lies in the trust we build through our experts and the operational excellence of our managed services.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L0	offer addresses the use case AND provides the technology	unconfirmed

Skytale	reference	SUP	published reference in this vertical, different use case	unconfirmed

6 further published reference(s) in this vertical are linked to this topic and are listed in the radar.

Competitive landscape

MEDIUM competitive intensity (score 7.3; 1 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include Siemens, who is both a vendor and a security provider in the OT space, and they have deep domain knowledge. Atos/Eviden, BT Business, Telefonica Tech, Airbus Protect, CrowdStrike, Leonardo, and Palo Alto Networks all sell SIEM and SOAR solutions. Each has strengths: Siemens knows the equipment, CrowdStrike is strong in endpoint detection, and Palo Alto Networks is a partner we can leverage. The customer will compare us on price, expertise, and ability to handle OT-specific challenges.

Competitor	Category	Position here	Basis	Evidence
Siemens	Industrial / OT specialist	active in Manufacturing	evidenced	SIG-2199333D7866
Atos / Eviden	Global systems integrator	sells SIEM and SOAR; competes in Cybersecurity	structural	—

BT Business	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Telefonica Tech	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Airbus Protect	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
CrowdStrike	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Leonardo	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Palo Alto Networks	Security specialist	sells SIEM and SOAR; competes in Cybersecurity — also an Orange partner	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Have you experienced any recent security incidents in your OT environment, and how were they detected?
- 2 How do you currently manage patches for your industrial control systems, and what is the typical time to apply critical updates?
- 3 Do you have visibility into the security posture of your OT assets, and is that visibility shared with your C-suite?
- 4 What is your current approach to monitoring OT networks for anomalies, and do you use any SIEM or SOAR tools today?
- 5 Are you aware of the recent Siemens vulnerabilities and how they might affect your operations?

Objections you will meet

They will say	You can answer
We already have a SIEM from another vendor, so why do we need Orange?	That's a fair point. Many customers have existing SIEM investments. Our value is not just the tool—it's the managed service, the OT-specific expertise, and the integration with partners like Palo Alto Networks. We can augment your existing setup or provide a more comprehensive solution.
Connecting our OT to a cloud service is risky—what if it causes downtime?	We understand the concern. That's why we design our deployments with safety in mind, using passive monitoring and careful segmentation. We have experience with industrial customers and can provide references to show how we handle these challenges.
We don't have the budget for another security service.	Budget is always a constraint. But consider the cost of a single OT incident—downtime, safety risks, regulatory fines. Our managed service can be more cost-effective than building in-house capabilities, and we can start with a pilot to demonstrate value.

Risks and unknowns

The main risk is that manufacturers may be reluctant to connect OT systems to a cloud-based monitoring service due to safety and reliability concerns. There is also uncertainty about the regulatory landscape—while there are proposed regulations, they are not yet applicable. We do not yet know how quickly customers will adopt managed OT security services versus building in-house capabilities. Additionally, the effectiveness of our approach in highly regulated industries like defense and healthcare is not fully proven.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a manufacturing client's OT threat detection and response tender, differentiating Orange Cyberdefense managed services with the ISO 27001 certification and the Palo Alto Networks partnership, and citing the Colgate-Palmolive and Saint-Gobain Glass references.
Sales	In a conversation with a manufacturing account's CISO, reference the Siemens vulnerabilities and ask whether they have a patch management process for industrial control systems, then introduce Orange Cyberdefense managed services as a potential support.
Strategist / Innovator	Commission a deep-dive brief on OT-aware threat detection and patch management for manufacturers, leveraging Orange Cyberdefense managed services and the cybersecurity experts capability pool, to validate the opportunity space before investing further.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
