

Deploy AI agents to automate insurance claims processing, reducing settlement times.

Finance, Banking and Insurance × Claims and case processing × Generative AI · OS108 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
78 is the world moving	48 can we play, can we win	HIGH 0 named in the evidence	€55.4m modelled evidence · per year	NOW budgeted procurement within 1...	L2 24 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 4.0 published reference(s) in Finance, Banking and Insurance, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity is to deploy AI agents that automate insurance claims processing, reducing settlement times for insurers. It targets insurance carriers and third-party administrators who face pressure to cut costs and improve customer experience. The time is now because AI agents have matured, and major insurers and insurtechs are already deploying them, as evidenced by recent acquisitions and funding rounds.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€68.0m €13.8m – €295m	€55.4m €11.2m – €240m	€416k €84k – €1.8m	modelled
Observed: tendered contract value, annualised	€100m	€100m	€753k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Finance, Banking and Insurance (EU27_2020)	11,116 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Generative AI	8.8 % of enterprises (10+ employees)	proxy	Eurostat · isoc_eb_ain2 · E_AI_TNLG	2025
Annual value of one engagement	€320k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	2,426 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Natural language generation Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract value is a configured assumption, not observed. Only 2 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes the financial sector; PROXY — auxiliary financial activities; PROXY — insurance and pension funding

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€100m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-26..2026-08-05
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 8 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

AI Claims Automation Architecture

This diagram shows how Orange's AI agents, running on sovereign cloud, integrate with the customer's existing systems to accelerate claims settlements.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The buyer is typically the Chief Claims Officer or COO at a mid-to-large insurer, who feels the pain of slow settlement times, high operational costs, and customer dissatisfaction. The trigger is often a competitive threat from AI-native insurtechs or a board mandate to improve efficiency. They are motivated by the need to reduce claims handling time and cost while maintaining accuracy and compliance.

Why it is hot now — every claim bound to a dated source

- IT service provider adesso acquires AI insurance claims tech, indicating market consolidation around AI claims automation. [SIG-3B5124975C5B, SIG-84C9C9B1476D, SIG-A8173F3651C4, SIG-C0EC2AA3673A]
- Several insurtechs are raising significant funding to scale AI-native insurance claims platforms, reflecting strong investor confidence. [SIG-1AAF9242928A, SIG-55C67D3F84B5, SIG-A7A58CA5B0E1, SIG-C17A15DBEECB]

- Major insurers are deploying AI agents in claims processes, demonstrating real-world adoption. [SIG-3F332D55E056]
- New AI-powered claims automation tools are being launched in the market. [SIG-6D6F5A69DE5A]
- IT service providers are acquiring AI insurance claims technology and embedding it into core insurance systems. [SIG-84C9C9B1476D, SIG-A8173F3651C4]
- Major insurers are deploying AI agents in claims processes to speed up settlements. [SIG-38C8027E9D1B, SIG-3F332D55E056]
- Several insurtechs have raised significant funding to scale AI-native insurance claims platforms. [SIG-1AAF9242928A, SIG-55C67D3F84B5, SIG-A7A58CA5B0E1]
- AI-driven claims automation is expected to boost insurance TPA growth through 2030. [SIG-BDC3CDE8E75C]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution using its Generative AI technology, supported by its AI/Data/Cloud experts and Orange Group researchers. The engagement would start with a discovery workshop to map the customer's claims workflow, then design and deploy AI agents that automate document processing, fraud detection, and settlement calculations. Orange would leverage its ISO 27001, SOC 2 Type II, and CISPE certifications to ensure security and compliance, and partner with Microsoft, Google Cloud, or NVIDIA for infrastructure and model optimization. The solution would be delivered on Orange's sovereign cloud infrastructure, ensuring data residency and trust.

Why Orange can win

Orange can win by combining its Generative AI technology with its certified, sovereign infrastructure (ISO 27001, SOC 2 Type II, CISPE) and deep expertise from its AI/Data/Cloud experts and Orange Group researchers. Unlike pure-play AI vendors, Orange offers end-to-end integration, from network to cloud to AI, which is critical for insurers with strict data governance requirements. The partnership with Microsoft, Google Cloud, and NVIDIA also allows Orange to bring best-in-class AI capabilities while maintaining sovereignty.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Microsoft	partner	L2	partner provides the required technology	unconfirmed
Google Cloud	partner	L2	partner provides the required technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.3; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitor	Category	Position here	Basis	Evidence
------------	----------	---------------	-------	----------

Google Cloud	Hyperscaler	sells Generative AI — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Generative AI — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Generative AI; active in Finance, Banking and Insurance; competes in OX: Smart Industries	structural	—
Capgemini	Global systems integrator	sells Generative AI; active in Finance, Banking and Insurance; competes in OX: Smart Industries	structural	—
IBM	Global systems integrator	sells Generative AI; active in Finance, Banking and Insurance	structural	—
Infosys	Global systems integrator	sells Generative AI	structural	—
Tata Consultancy Services	Global systems integrator	sells Generative AI	structural	—
Salesforce	Customer-experience platform	sells Generative AI	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current average claims settlement time, and what is the target you are aiming for?
- 2 How many claims do you process per month, and what percentage are fully automated today?
- 3 What are the top three bottlenecks in your claims process that you believe AI could address?
- 4 Do you have a data residency or sovereignty requirement that would preclude using a public cloud?
- 5 Have you already evaluated any AI claims solutions, and if so, what were the main blockers?
- 6 Who in your organization would be the ultimate decision-maker for a claims automation project?

Objections you will meet

They will say	You can answer
We already have a claims system from a major vendor; why do we need AI agents?	That's a fair point. Many insurers have legacy systems that are not designed for AI. Our approach is to augment your existing system with AI agents that can integrate via APIs, reducing disruption and speeding up time-to-value.
We are concerned about AI governance and regulatory compliance.	Compliance is a top concern. Orange's solutions are built on certified infrastructure (ISO 27001, SOC 2 Type II, CISPE) and we work with your compliance team to ensure AI models are explainable and auditable, meeting regulatory requirements.
We have tried AI before and it didn't work; why would this be different?	AI has matured significantly. Recent advances in generative AI and agentic frameworks have made automation more reliable. Also, we bring domain expertise from our insurance references and a proven methodology to ensure successful deployment.

Risks and unknowns

Key risks include regulatory uncertainty around AI governance in insurance, as highlighted by recent discussions on AI governance in commercial insurance. There is also the risk that AI agents may not handle complex claims accurately, leading to customer backlash. Unknowns include the long-term impact on jobs and the actual ROI of AI claims automation, as some insurers are only beginning to disclose AI-related job cuts.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a European insurer's claims automation tender, leveraging Banqsoft and Stø as references, and detailing how Orange's Generative AI technology, ISO 27001 and SOC 2 Type II certifications, and partnerships with Microsoft, Google Cloud, and NVIDIA address security and scalability.
Sales	In a meeting with a European insurer's claims operations leader, say: 'We combine our ISO 27001 and SOC 2 Type II certified cloud and AI expertise with Microsoft and Google Cloud to help you deploy AI agents that cut claims settlement times—can we explore a pilot on a specific claims process?'

Strategist / Innovator	Commission a deep-dive brief on AI-native claims automation, mapping the competitive landscape of insurtechs and IT service providers to decide where Orange should invest in capability building or partnerships next quarter.
------------------------	---

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: what_is_changing (named entities that were never supplied: adesso, omni:us, Faye, Pace); competitive_landscape (named entities that were never supplied: adesso, omni:us, Faye, Pace); diagram (4 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
