

Provide sovereign cloud solutions for European healthcare organizations to meet EHDS Secure Processing Environment requirements for secondary use of health data.

Healthcare × Data sovereignty and protection × Sovereign and trusted cloud · OS110 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
83 is the world moving	61 can we play, can we win	HIGH 2 named in the evidence	€3.1bn partial evidence · per year	NOW budgeted procurement within 1...	L0 18 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

We help European healthcare organizations meet EHDS Secure Processing Environment requirements for secondary use of health data by delivering sovereign cloud solutions built on our SecNumCloud-certified Cloud Avenue and HDS-certified infrastructure, supported by our healthcare and cybersecurity experts. This opportunity exists now because the European Commission has published concrete requirements for secure processing environments and HealthData@EU, and organizations are actively seeking readiness support.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€5.0bn €320m – €13.9bn	€3.1bn €197m – €8.5bn	€108m €6.9m – €299m	partial
Observed: tendered contract value, annualised	€103m €103m – €196m	€103m €103m – €196m	€3.6m €3.6m – €6.9m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Healthcare (EU27_2020)	46,762 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Sovereign and trusted cloud	52.7 % of enterprises (10+ employees)	proxy	Eurostat · isoc_cicce_usen2 · E_CC	2025
Annual value of one engagement	€1.7m per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-06
Size-weighted buyer base	5,698 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Enterprises buying paid cloud services Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes health activities; PROXY — residential care

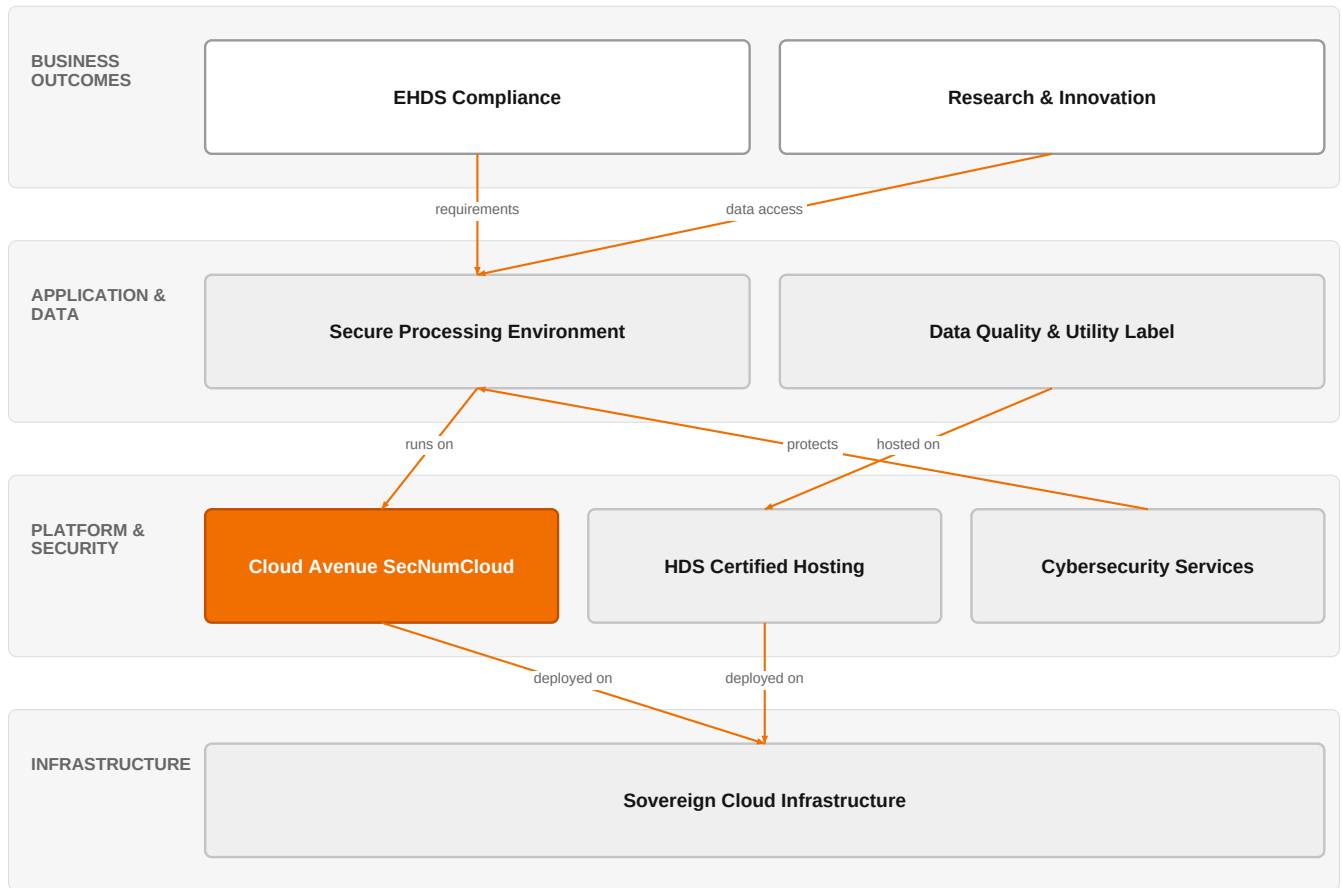

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€103m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-06
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 19 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Sovereign Cloud for EHDS Secondary Use

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This diagram shows how Orange's sovereign cloud components combine to meet EHDS requirements for secure processing of health data.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The buyer is typically the Chief Information Officer or Chief Medical Information Officer at a European hospital network, research institute, or national health data authority. The pain is operational: they must enable secondary use of health data for research and innovation while complying with EHDS secure processing requirements, but they lack the sovereign cloud infrastructure and expertise to do so. The trigger is an upcoming EHDS compliance deadline or a request from researchers to access data for a specific project.

Why it is hot now — every claim bound to a dated source

- EHDS requirements for Secure Processing Environments dictate how health data must be processed securely. [SIG-8D64FD10F3A7]
- The need for EHDS readiness includes preparing for data quality and utility labeling. [SIG-D49E57B7296C]
- EHDS requires secure processing environments and HealthData@EU, which mandate strong data protection and sovereignty. [SIG-8D64FD10F3A7, SIG-A263C29CEE4D]
- TriNetX is assisting European healthcare organizations in EHDS readiness, indicating a market for compliant data infrastructure. [SIG-8DA85D3DE80A, SIG-BF5FFD925439]
- The European Commission is defining common specifications for EHR systems, which will require sovereign data handling. [SIG-E02F419156FA]

- European health data sharing is a regulatory focus, requiring data protection and sovereignty. [SIG-A263C29CEE4D, SIG-D49E57B7296C]

What Orange would deliver, and why it can win

What Orange would deliver

We would assemble a sovereign cloud solution based on Cloud Avenue / Ready SecNumCloud, certified SecNumCloud and HDS, to host secure processing environments for secondary use of health data. Our healthcare experts and cybersecurity experts would design the architecture, and our AI / Data / Cloud experts would support data quality and utility labeling. The engagement would start with a readiness assessment, then deploy the cloud environment, and finally onboard researchers and data controllers.

Why Orange can win

Orange brings a unique combination of SecNumCloud and HDS certifications on a single cloud platform, which is directly relevant to EHDS secure processing requirements. Our healthcare experts and cybersecurity experts provide domain depth, and our reference with MicroPort CardioFlow demonstrates experience in regulated health environments. However, competitors like Thales and Capgemini also have strong sovereign cloud offerings, so we must differentiate on our end-to-end healthcare focus and certifications.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Cloud Avenue / Ready SecNumCloud	offer	L0	offer addresses the use case AND provides the technology	unconfirmed
Enovacom / Enovalife	offer	L0	offer addresses the use case AND provides the technology	unconfirmed
Quantum Defender / quantum-safe offers	offer	L1	offer addresses the use case but not this technology	unconfirmed

Bliksund	reference	SUP	published reference in this vertical, different use case	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.5; 2 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Thales is a security specialist with sovereign cloud offerings, as evidenced by their role as first strategic customer for SAP and S3NS trusted cloud. Capgemini is a global systems integrator building trusted cloud platforms in France. Google Cloud and Microsoft are hyperscalers with sovereign cloud solutions, and both are also Orange partners. Atos/Eviden, Deutsche Telekom/T-Systems, Sopra Steria, and Swisscom are also active in sovereign cloud and healthcare. The customer will compare us on certifications, healthcare expertise, and ability to meet EHDS requirements.

Competitor	Category	Position here	Basis	Evidence
Thales	Security specialist	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	evidenced	SIG-97C21A9E6B17
Capgemini	Global systems integrator	competes in Cloud	evidenced	SIG-C6BD205D845B
Google Cloud	Hyperscaler	sells Sovereign and trusted cloud; competes in Cloud — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Sovereign and trusted cloud; competes in Cloud — also an Orange partner	structural	—
Atos / Eviden	Global systems integrator	sells Sovereign and trusted cloud; active in Healthcare; competes in Cloud, Cybersecurity	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	sells Sovereign and trusted cloud; active in Healthcare; competes in Cloud, Cybersecurity	structural	—
Sopra Steria	Global systems integrator	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	structural	—
Swisscom	Telecom operator peer	sells Sovereign and trusted cloud; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current timeline for EHDS Secure Processing Environment compliance, and have you already conducted a gap assessment?
- 2 Which secondary use cases are you prioritizing (e.g., research, public health, regulatory) and what data types will be processed?
- 3 Do you currently have a sovereign cloud or certified hosting solution in place for health data, and if so, which certifications does it hold?
- 4 Who in your organization is responsible for EHDS readiness, and what budget has been allocated for infrastructure changes?
- 5 Are you already working with any external partners on EHDS readiness, such as TriNetX, and what gaps remain?

Objections you will meet

They will say	You can answer
We already have a cloud provider that meets our needs.	That may be true, but EHDS Secure Processing Environments impose specific requirements that may not be met by your current provider. Our solution is purpose-built for EHDS with SecNumCloud and HDS certifications, and we can help you assess compliance.
EHDS is still evolving, so we prefer to wait.	Waiting is understandable, but the requirements for Secure Processing Environments are already published, and early movers will be better positioned. We can start with a readiness assessment that is flexible enough to adapt to final regulations.
We are concerned about the cost of a sovereign cloud solution.	Cost is a valid concern, but non-compliance can be more expensive. Our solution is designed to be cost-effective while meeting all security and sovereignty requirements, and we can help you prioritize investments.

Risks and unknowns

The main risk is that EHDS implementing acts are still evolving, so customers may delay investment until requirements are final. We also face strong competition from established sovereign cloud providers. A genuine unknown is how quickly healthcare organizations will move from readiness assessments to actual procurement, and whether our HDS certification is sufficient for all EU member states' interpretations of EHDS.

Next action, by role (FR-17)

Role	Do this next
------	--------------

Presales / Proposal	Prepare a bid brief for a European healthcare organization, leveraging Orange's SecNumCloud and HDS certifications, and reference the Enovacom/Enovalife suite to demonstrate healthcare-specific data integration and compliance capabilities.
Sales	In a meeting with a European healthcare organization's IT or compliance lead, say: 'Orange's cloud solutions, certified to SecNumCloud and HDS, are designed to meet the stringent data protection requirements of EHDS Secure Processing Environments, ensuring your health data is processed securely and in full compliance.'
Strategist / Innovator	Commission a deep-dive brief on EHDS Secure Processing Environment requirements, mapping them against Orange's sovereign cloud capabilities (SecNumCloud, HDS) and identifying gaps for investment in healthcare-specific offerings.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: what_is_changing (named entities that were never supplied: TriNetX); diagram (5 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
