

Deploy agentic AI for end-to-end insurance claims processing to accelerate settlements and improve accuracy, targeting P&C insurers with high-volume claims.

Finance, Banking and Insurance × Claims and case processing × Agentic AI · OS111 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
78 is the world moving	49 can we play, can we win	HIGH 0 named in the evidence	€11.3m modelled evidence · per year	NOW budgeted procurement within 1...	L2 17 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 4.0 published reference(s) in Finance, Banking and Insurance, below the threshold of 5. A customer conversation here has no proof point behind it yet.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€13.1m €2.7m – €56.8m	€11.3m €2.3m – €49.1m	€85k €17k – €368k	modelled
Observed: tendered contract value, annualised	€100m	€0	€0	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Finance, Banking and Insurance (DE)	2,253 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting Agentic AI	7.0 % of enterprises (10+ employees)	proxy	Eurostat · isoc_eb_ain2 · E_AI_TPA	2025
Annual value of one engagement	€320k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	589 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. AI automating workflows or assisting decisions Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract value is a configured assumption, not observed. Only 2 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 2 of 3 declared geographies are outside the European reference data (AU, US); the estimate covers the European footprint only. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes the financial sector; PROXY — auxiliary financial activities; PROXY — insurance and pension funding

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€100m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-26..2026-08-05
Assumed obtainable share of the serviceable market	0.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 8 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 2 of 3 declared geographies are outside the European reference data (AU, US); the estimate covers the European footprint only.

The solution, in one picture

Agentic AI Claims Processing Stack

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This stack shows how Orange combines certified infrastructure, agentic AI, and integration to deliver faster, more accurate claims processing.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The Chief Claims Officer or COO signs, but the pain is felt by claims operations managers drowning in high-volume, repetitive claims. The trigger is often a spike in claims volume, a regulatory deadline, or a competitor announcing faster settlements. They need to cut cycle time and error rates without adding headcount, and they're under pressure to show AI adoption to the board.

Why it is hot now — every claim bound to a dated source

- IT service provider adesso acquires AI insurance claims tech, embedding AI into core insurance systems. [SIG-A8173F3651C4, SIG-84C9C9B1476D]
- Suncorp will deploy AI agents in insurance claims process, indicating enterprise adoption. [SIG-3F332D55E056]
- Reserv raises significant funding to expand AI-native insurance claims platform, signaling market momentum. [SIG-A7A58CA5B0E1, SIG-55C67D3F84B5]

What Orange would deliver, and why it can win

What Orange would deliver

We start with a discovery workshop using our AI / Data / Cloud experts to map the claims journey and identify high-volume, rule-based steps. Then we design an agentic AI solution on our secure, certified infrastructure (ISO 27001, SOC 2 Type II, CISPE), leveraging Microsoft's Agentic AI tools and our integration expertise. We pilot on a specific claims type, measure outcomes, then scale across the enterprise, with Orange Group researchers advising on architecture and governance.

Why Orange can win

We combine deep integration skills with certified, sovereign infrastructure—ISO 27001, SOC 2 Type II, CISPE—that hyperscalers and pure software vendors can't match. Our partnership with Microsoft lets us bring enterprise-grade agentic AI, but we wrap it in the compliance and security that insurers require. We also have references in financial services (Banqsoft, Stø) that prove we can deliver in regulated environments.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Microsoft	partner	L2	partner provides the required technology	unconfirmed
Genesys	partner	L2	partner provides the required technology	unconfirmed
Agentic AI	technology	L3	no offer path, but adjacent assets or Orange research exist	unconfirmed

Competitive landscape

HIGH competitive intensity (score 7.7; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Microsoft sells Agentic AI directly and is strong on platform and ecosystem, but lacks insurance-specific claims IP. Accenture and Capgemini have deep insurance domain expertise and integration muscle, but may be slower and more expensive. Infosys offers cost-effective delivery. Genesys and NiCE focus on customer experience, not core claims. Salesforce brings CRM-centric automation. Mistral AI provides open-source models but not end-to-end solutions. The customer will compare us on speed, compliance, and total cost of ownership.

Competitor	Category	Position here	Basis	Evidence
Microsoft	Hyperscaler	sells Agentic AI — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Agentic AI; active in Finance, Banking and Insurance; competes in OX: Smart Industries	structural	—
Capgemini	Global systems integrator	sells Agentic AI; active in Finance, Banking and Insurance; competes in OX: Smart Industries	structural	—
Infosys	Global systems integrator	sells Agentic AI	structural	—
Genesys	Customer-experience platform	sells Agentic AI — also an Orange partner	structural	—

NICE	Customer-experience platform	sells Agentic AI — also an Orange partner	structural	—
Salesforce	Customer-experience platform	sells Agentic AI	structural	—
Mistral AI	Data and AI platform	sells Agentic AI	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What is your current average claims cycle time for high-volume, low-complexity claims, and what is your target?
- 2 Which claims types are most repetitive and rule-based, and what is their share of total volume?
- 3 Have you already piloted any AI or automation in claims, and what were the outcomes?
- 4 What are your key compliance requirements for AI-driven decisions (e.g., explainability, audit trails)?
- 5 Who is your executive sponsor for digital transformation in claims, and what is their mandate?
- 6 How do you currently handle peak claims volumes, and what is the cost of manual processing?

Objections you will meet

They will say	You can answer
We've heard agentic AI is risky and unproven for claims.	It's true that agentic AI is new, but enterprises like Suncorp are already deploying it in claims, and the market is consolidating around proven platforms. We'll start with a controlled pilot on a narrow claims type, with human oversight, to build confidence before scaling.
We're concerned about job losses and employee backlash.	That's a legitimate concern. AI will change roles, but our approach is to augment your team, not replace them. We'll help you reskill staff to handle exceptions and complex cases, and we'll communicate the benefits clearly to your workforce.
We already have a relationship with a big consultancy for this.	That's fine—many of our clients work with multiple partners. What we offer is a unique combination of certified infrastructure, integration expertise, and a partnership with Microsoft that ensures your solution is both compliant and cutting-edge. We're happy to collaborate with your existing partners.

Risks and unknowns

The main risk is that agentic AI in claims is still maturing—accuracy and hallucination issues could undermine trust. Regulatory scrutiny on AI decision-making is evolving, and we don't yet know how auditors will treat autonomous claims processing. Also, internal resistance from claims staff worried about job losses could stall adoption. We need to be transparent about these unknowns and build in human-in-the-loop controls.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a P&C insurer, leveraging our Microsoft and Genesys partnerships and referencing our work with Banqsoft and Stø to demonstrate credibility in financial services.
Sales	In a meeting with a P&C insurer's claims operations leader, say: 'We have deep expertise in AI and cloud, certified to ISO 27001 and SOC 2 Type II, and we partner with Microsoft and Genesys to deliver agentic AI solutions that can accelerate claims settlements.'
Strategist / Innovator	Commission a deep-dive brief on agentic AI claims processing, mapping our AI/Data/Cloud and IoT experts against the claims lifecycle and validating the opportunity with Orange Group researchers.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: summary (named entities that were never supplied: Suncorp, adesso, omni:us, Reserv); what_is_changing (named entities that were never supplied: Suncorp, adesso, omni:us, Reserv); diagram (3 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
