

Resilient edge computing with AI-driven anomaly detection for defense critical infrastructure, such as military bases and defense logistics networks.

Defense × Critical infrastructure monitoring × Edge computing · OS119 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
65 is the world moving	51 can we play, can we win	HIGH 1 named in the evidence	€95.9m observed evidence · per year	LATER research and standards activi...	L1 13 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 0.0 published reference(s) in Defense, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity targets defense organizations operating critical infrastructure such as military bases and logistics networks, offering resilient edge computing with AI-driven anomaly detection to ensure operational continuity and security. The need is urgent due to increasing cyber threats and the limitations of cloud-centric monitoring, which introduces latency and single points of failure. Orange Business can assemble a sovereign, certified solution leveraging its cybersecurity, IoT, and defense expertise, along with private mobile networks and edge infrastructure.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€95.9m	€95.9m	€1.2m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€95.9m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-21..2026-08-05
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 5 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Sovereign Edge AI for Defense Infrastructure

This diagram shows how Orange integrates sovereign connectivity, edge processing, and AI analytics to deliver real-time anomaly detection for defense critical infrastructure.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Cyber attackers increasingly target Industrial Control Systems (ICS) that administer critical infrastructure, yet many attacks go unreported, delaying incident response and recovery. Traditional cloud-based solutions suffer from excessive latency and energy overhead, making edge-based AI architectures necessary for real-time fault detection. EU-funded projects like RESCUE are actively exploring edge computing and AI for critical infrastructure resilience, signaling a policy and funding push. Advances in edge AI, including lightweight detection models and telemetry-driven network control, are making low-latency, on-premise intelligence feasible.

Who buys, and why now

The buyer is typically a defense procurement officer or a chief information security officer (CISO) within a ministry of defense or a defense logistics agency. The pain is felt by base commanders and network operations teams who face operational disruptions from undetected anomalies in power, water, or communication systems. The trigger is often a near-miss incident, a regulatory audit, or a mandate to enhance cyber resilience following a publicized attack on critical infrastructure.

Why it is hot now — every claim bound to a dated source

- EU-funded project strengthens resilience and security of critical infrastructure via edge computing and AI.

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a sovereign edge computing solution using its Cybersecurity experts and Defense and security experts to design a secure architecture, certified with ISO 27001 and SecNumCloud. The core would be a private mobile network (Private mobile networks) for reliable, low-latency connectivity, integrated with edge nodes (potentially from partners like Dell or HPE) running AI-based anomaly detection models. Orange Drone Guardian could be added for perimeter surveillance. The engagement would start with a security assessment, then a pilot on a single base, followed by scaled deployment across the logistics network.

Why Orange can win

Orange can win because it combines sovereign, certified infrastructure (SecNumCloud, ISO 27001) with deep defense expertise and a full-stack capability from connectivity to cybersecurity. Unlike hyperscalers or pure IT vendors, Orange offers a trusted, European sovereign alternative with private mobile networks that ensure data stays on-premise. However, the asset list is thin on specific edge computing products, so Orange would need to partner with hardware vendors like Dell or HPE to deliver the full solution.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Drone Guardian	offer	L1	offer addresses the use case but not this technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.3; 1 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

AWS offers mature edge computing services but lacks sovereign European credentials. Deutsche Telekom/T-Systems and Lumen compete on connectivity and cybersecurity, with strong telecom assets. NTT DATA and Atos/Eviden bring systems integration and defense experience, with Atos active in defense. Schneider Electric specializes in industrial OT environments. HPE and Nokia provide edge hardware and private network equipment. The customer will compare Orange against these players on sovereignty, integration depth, and end-to-end accountability.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Edge computing — also an Orange partner	evidenced	SIG-701F806B6A7A
Deutsche Telekom / T-Systems	Telecom operator peer	sells Edge computing; competes in Connectivity Solutions, Cybersecurity	structural	—
Lumen Technologies	Telecom operator peer	sells Edge computing; competes in Connectivity Solutions, Cybersecurity	structural	—

NTT DATA	Global systems integrator	sells Edge computing; competes in Connectivity Solutions	structural	—
Schneider Electric	Industrial / OT specialist	sells Edge computing	structural	—
HPE (Aruba, Athonet)	Network equipment vendor	sells Edge computing; competes in Connectivity Solutions — also an Orange partner	structural	—
Nokia	Network equipment vendor	sells Edge computing; competes in Connectivity Solutions	structural	—
Atos / Eviden	Global systems integrator	active in Defense; competes in Cybersecurity	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What specific critical infrastructure assets (e.g., power, water, communications) do you need to monitor, and what are the current failure detection times?
- 2 Have you experienced any recent incidents where delayed detection led to operational impact? What was the cost?
- 3 What are your data sovereignty and security certification requirements for edge processing?
- 4 Do you currently have private mobile network coverage on your bases, or would that need to be deployed?
- 5 Who is the ultimate decision-maker for a pilot project of this nature, and what is their timeline?
- 6 How do you currently handle AI model training and updates for any existing monitoring systems?

Objections you will meet

They will say	You can answer
We already have cloud-based monitoring that works fine.	Cloud-based monitoring introduces latency and dependency on external connectivity, which is risky for critical infrastructure. Edge computing processes data locally, ensuring real-time detection even if the network is compromised.
Why not just use a hyperscaler like AWS?	Hyperscalers offer powerful tools, but sovereignty and certification are often not aligned with defense requirements. Orange provides a European, sovereign alternative with SecNumCloud and ISO 27001, and we can integrate with your existing infrastructure.
This sounds expensive and complex.	We can start with a pilot on a single site to demonstrate value and refine the solution. Our modular approach allows you to scale incrementally, and the cost of a breach or downtime is typically far higher.

Risks and unknowns

The main risk is that defense procurement cycles are long and security clearance requirements may delay adoption. The technology is still maturing, with research focused on testbeds and simulations rather than large-scale deployments. It is unknown how quickly defense organizations will trust AI-driven anomaly detection over traditional rule-based systems. Additionally, the competitive intensity is high, and Orange's edge computing portfolio may be perceived as less specialized than pure-play vendors.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a defense critical infrastructure monitoring opportunity, leveraging Orange Drone Guardian, private mobile networks, and partnerships with NVIDIA, Dell, and HPE, and include a section on how Orange's cybersecurity and IoT experts can address AI-driven anomaly detection at the edge.
Sales	In a conversation with the head of IT at a European defense logistics operator, mention Orange's ISO 27001 and SecNumCloud certifications and how Orange Drone Guardian and private mobile networks can support resilient edge operations.
Strategist / Innovator	Commission a deep-dive brief on EU-funded edge-computing and AI resilience projects for defense critical infrastructure, mapping them against Orange's cybersecurity and IoT expertise, and schedule a review with Orange Group researchers within the next quarter.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
