

IoT-enabled tree health monitoring and maintenance scheduling for UK public sector housing, parks, and highway tree works, leveraging dynamic purchasing system tenders.

Public / Government sector × Asset and inventory tracking × IoT platform · OS120 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
66 is the world moving	62 can we play, can we win	HIGH 0 named in the evidence	€25.0m observed evidence · per year	NOW budgeted procurement within 1...	L0 7 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to provide IoT-enabled tree health monitoring and maintenance scheduling for UK public sector housing, parks, and highway tree works, leveraging the dynamic purchasing system (DPS) tenders recently published. It targets public sector bodies in London that need to manage tree assets efficiently and comply with safety and maintenance obligations. The timing is now because multiple DPS tenders indicate active procurement within the next 12 months.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€25.0m €25.0m – €48.0m	€25.0m €25.0m – €48.0m	€877k €877k – €1.7m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€25.0m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 16 matching notices, matched on use case via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 1 of 1 declared geographies are outside the European reference data (GB); the estimate covers the European footprint only.

The solution, in one picture

IoT Tree Health Monitoring Solution

This diagram shows how sensor data flows from trees through Orange's Live Objects platform to analytics and ultimately to maintenance scheduling and compliance reporting.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The UK public sector is increasingly using dynamic purchasing systems to procure tree work services, as evidenced by multiple DPS tenders for housing, park, and highway tree works. This shift indicates a move towards more flexible, framework-based procurement that can accommodate innovative solutions like IoT monitoring. The technology maturity of IoT platforms, such as Orange's Live Objects, enables cost-effective, scalable monitoring of distributed assets like trees. Additionally, there is a growing regulatory and safety focus on tree health and maintenance in public spaces, driving the need for proactive management.

Who buys, and why now

The buyer is typically a public sector procurement officer or asset manager within a London borough council or housing association. The pain is the manual, reactive management of tree assets, leading to missed maintenance, safety hazards, and compliance risks. The trigger is the publication of DPS tenders for tree works, which signals a budgeted need and a formal procurement process. The operational pain includes lack of real-time visibility into tree health, inefficient scheduling of arboricultural work, and difficulty in prioritizing limited resources.

Why it is hot now — every claim bound to a dated source

- Multiple dynamic purchasing system tenders for housing and park tree works in London indicate ongoing public sector spending. [SIG-5F7B37E70F68, SIG-F08D53D6E313, SIG-796659BCD7EC, SIG-BD62F3DD3E10, SIG-D5CCD9DF2F46]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver an IoT-based tree health monitoring solution using its Live Objects platform. The engagement would start with a discovery workshop to understand the customer's tree inventory and maintenance workflows. Then, Orange would deploy IoT sensors (via partners) on key trees to collect data on health indicators such as moisture, tilt, and vibration. This data would be streamed to Live Objects, where Orange's IoT and digital experts would build dashboards and analytics to predict maintenance needs. Finally, Orange would integrate with the customer's existing asset management systems to automate work order generation and scheduling. The solution would be delivered on Orange's sovereign, certified infrastructure (ISO 27001, SecNumCloud, CISPE) to meet public sector security requirements.

Why Orange can win

Orange can win because it combines a proven IoT platform (Live Objects) with deep expertise in IoT and digital solutions, as well as defense and security experts to address sovereignty concerns. Orange's certifications (ISO 27001, SecNumCloud, CISPE) provide the trust required for public sector deployments. The reference of Grand Paris Sud demonstrates successful IoT deployment in a public context. However, the assets are thin in terms of specific tree monitoring expertise, so Orange would need to partner with sensor and analytics specialists.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Live Objects	offer	LO	offer addresses the use case AND provides the technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.2; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells IoT platform — also an Orange partner	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Connectivity Solutions	structural	—
NTT DATA	Global systems integrator	sells IoT platform; competes in Connectivity Solutions	structural	—
Proximus	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
Telefonica Tech	Telecom operator peer	sells IoT platform; active in Public / Government sector; competes in Connectivity Solutions	structural	—
Telia Company	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
Verizon Business	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—

Vodafone Business	Telecom operator peer	sells IoT platform; competes in Connectivity Solutions	structural	—
-------------------	-----------------------	--	------------	---

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 How do you currently monitor the health of your tree assets, and what data do you collect?
- 2 What is your current process for scheduling tree maintenance, and where are the biggest inefficiencies?
- 3 Have you already deployed any IoT sensors for asset monitoring? If so, which platform do you use?
- 4 What are your specific compliance requirements for data security and sovereignty in this project?
- 5 Which DPS tender are you planning to use for this procurement, and what is your timeline?
- 6 Who is the budget holder for tree maintenance and technology investments?

Objections you will meet

They will say	You can answer
We already have a tree management system in place.	That's true, and we're not proposing to replace it. Our solution complements existing systems by adding real-time sensor data and predictive analytics, which can feed into your current workflows.
IoT sensors on trees seem expensive and hard to maintain.	Cost is a valid concern. However, by using low-power sensors and a scalable platform like Live Objects, we can keep operational costs low. The long-term savings from preventing tree failures and optimizing maintenance often outweigh the initial investment.
We are concerned about data security and sovereignty.	That's a critical requirement for public sector. Orange offers sovereign cloud options with certifications like SecNumCloud and CISPE, ensuring your data stays within the EU and meets strict security standards.
Why not just use a simpler solution from a hyperscaler?	Hyperscalers offer strong platforms, but they may not provide the same level of public sector trust, sovereignty, and local support. Orange brings a combination of a proven IoT platform, security certifications, and experience with public sector deployments like Grand Paris Sud.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a UK public sector tree works tender that differentiates Orange by combining Live Objects' IoT capabilities with our ISO 27001, SecNumCloud, and CISPE certifications, and include a case study of Grand Paris Sud to demonstrate proven delivery in a public sector context.
Sales	In a meeting with a UK public sector housing or parks procurement lead, say: 'We have helped a major public sector entity like Grand Paris Sud implement IoT-based asset monitoring, and we can bring that expertise to your tree management needs, using our secure and certified IoT platform Live Objects to help you meet your maintenance scheduling goals.'
Strategist / Innovator	Deep-dive into the UK public sector IoT tree monitoring opportunity by mapping the procurement pipeline for dynamic purchasing system tenders in housing, parks, and highway tree works, and assess how Live Objects can be positioned as the IoT platform for asset tracking and maintenance scheduling, leveraging Orange's IoT and digital expertise, ISO 27001 and SecNumCloud certifications, and the Grand Paris Sud reference as a proof point.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

Signal	Date	Publisher	T	Title and link

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: competitive_landscape (no claim survived evidence binding); risks_and_unknowns (missing from the model output); diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
