

Deploy generative AI for intelligent call routing and triage on non-emergency police lines to reduce response times and improve citizen experience in public safety communications.

Public / Government sector × Emergency response coordination × Generative AI · OS130 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
59 is the world moving	64 can we play, can we win	MEDIUM 2 named in the evidence	€220m observed evidence · per year	LATER research and standards activi...	L1 7 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€6.2m €6.2m – €13.5m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 1 of 1 declared geographies are outside the European reference data (GB); the estimate covers the European footprint only.

The solution, in one picture

AI-Powered Call Triage for Public Safety

This diagram shows how Orange's AI and communication assets integrate with existing police dispatch to triage calls efficiently and securely.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The buyer is typically a chief digital officer or head of public safety communications within a police force or government agency. The pain is operational: call handlers are overwhelmed, response times lag, and citizens experience frustration. The trigger is often a public incident or performance review highlighting inefficiencies, or a mandate to modernize public safety infrastructure. They act when budget allows and when a proven reference exists.

Why it is hot now — every claim bound to a dated source

- VodafoneThree is adding AI to non-emergency police call routing, indicating a trend in AI-supported public safety communications. [SIG-CCD5C9A51C57]
- VodafoneThree adds AI to non-emergency police call routing in the UK. [SIG-CCD5C9A51C57]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution using Live Intelligence for real-time AI-driven call triage, Live Intelligence Studio for customizing models to police call scenarios, and Business Talk for secure communications integration. The engagement would start with a pilot using Orange's AI/Data/Cloud experts to configure the system, then deploy on Orange's secure infrastructure with ISO 27001 and SecNumCloud certifications. Orange Group researchers would refine the models, and the solution would be delivered with support from partners like Microsoft or Google Cloud for underlying AI services.

Why Orange can win

Orange can win because it combines sovereign, certified infrastructure (ISO 27001, SecNumCloud) with deep AI expertise and a proven reference in Grand Paris Sud. The ability to run on trusted cloud is a differentiator for public sector clients. However, the assets are thin on specific public safety domain experience, so Orange must leverage its general AI

capabilities and partner ecosystem.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator

Competitive landscape

MEDIUM competitive intensity (score 7.0; 2 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include hyperscalers like Microsoft and Google Cloud, who sell generative AI and have strong cloud platforms; they are also Orange partners. Accenture and Capgemini are active in the public sector and can integrate AI solutions. AWS is a major cloud provider with edge computing strengths. Ericsson is a network equipment vendor with 5G positioning capabilities. The customer will compare on AI maturity, public sector credibility, and sovereignty.

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	competes in Cloud — also an Orange partner	evidenced	SIG-701F806B6A7A
Ericsson	Network equipment vendor	named in this topic's evidence	evidenced	SIG-CCD5C9A51C57
Google Cloud	Hyperscaler	sells Generative AI; competes in Cloud, CX: Customer Experience — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Generative AI; competes in Cloud, CX: Customer Experience — also an Orange partner	structural	—
Accenture	Global systems integrator	sells Generative AI; active in Public / Government sector; competes in Cloud, CX: Customer Experience	structural	—
Capgemini	Global systems integrator	sells Generative AI; active in Public / Government sector; competes in Cloud, CX: Customer Experience	structural	—
IBM	Global systems integrator	sells Generative AI; active in Public / Government sector; competes in Cloud	structural	—

Infosys	Global systems integrator	sells Generative AI; competes in Cloud, CX: Customer Experience	structural	—
---------	---------------------------	---	------------	---

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1
- How are non-emergency calls currently triaged, and what is the average response time for low-priority incidents?
- 2
- Have you explored AI-based call routing before? If so, what were the outcomes?
- 3
- What are the main bottlenecks in your call handling process—volume, staffing, or classification accuracy?
- 4
- What are your data sovereignty and security requirements for handling citizen call data?
- 5
- Do you have a mandate to modernize public safety communications in the next 12-18 months?
- 6
- Who would be the executive sponsor for a pilot project in AI-assisted call routing?

Objections you will meet

They will say	You can answer
We are concerned about AI bias and errors in emergency contexts.	That is a valid concern. Our solution includes rigorous testing and human-in-the-loop oversight. We also adhere to AI trustworthiness frameworks and can provide transparency in decision-making.
We already have a system in place; why change?	Your current system may not leverage the latest AI capabilities. Our solution can augment existing systems, reducing response times and improving citizen experience without a full overhaul.
We are worried about data privacy and sovereignty.	Orange offers sovereign cloud options with ISO 27001 and SecNumCloud certifications, ensuring your data stays within legal boundaries. We can also deploy on-premises if required.
We have budget constraints.	We can start with a pilot to demonstrate value with minimal investment. The pilot can be scaled based on results, and we can explore funding options.

Risks and unknowns

Key risks include data privacy and bias in AI models, which could undermine public trust. The technology is still evolving; agentic AI is in early stages. There is uncertainty about integration with legacy police call systems and whether the solution can scale across different jurisdictions. The lack of a dedicated public safety reference from Orange is a gap.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a public safety communications tender, differentiating Orange's approach by combining Live Intelligence with our ISO 27001 and SecNumCloud certifications, and referencing our work with Grand Paris Sud, while ensuring compliance with CISPE standards.
Sales	In a conversation with a public safety communications leader at a European government agency, say: 'We've seen VodafoneThree add AI to non-emergency police call routing in the UK, and we believe our Live Intelligence platform, built on our AI and data expertise, could help you improve response times and citizen experience. Could we explore how that might fit your environment?'
Strategist / Innovator	Deep-dive into the VodafoneThree UK non-emergency police call routing AI initiative to understand the technical and operational requirements, and assess how Orange's Live Intelligence and Live Intelligence Studio could be positioned for public safety communications, while monitoring relevant research and standards activity.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: summary (named entities that were never supplied: VodafoneThree); what_is_changing (named entities that were never supplied: VodafoneThree); diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
