

Secure, interoperable platforms for multi-center clinical research on connective tissue disease-associated interstitial lung disease.

Life sciences × Clinical data interoperability × Sovereign and trusted cloud · OS134 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
30 is the world moving	51 can we play, can we win	HIGH 0 named in the evidence	€261m modelled evidence · per year	LATER research and standards activi...	L0 3 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 0.0 published reference(s) in Life sciences, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity is a secure, interoperable platform for multi-center clinical research on connective tissue disease-associated interstitial lung disease (CTD-ILD). It serves European research consortia and hospitals needing to share sensitive patient data across borders while complying with new clinical practice guidelines. The need is urgent because the ERS/EULAR task force has published guidelines that standardize data collection and follow-up, and the EOSC-ENTRUST initiative is driving a common blueprint for federated data access.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€314m €83.2m – €1.2bn	€261m €69.1m – €1.0bn	€3.9m €1.0m – €15.2m	modelled
Observed: tendered contract value, annualised	€25.1m	€25.1m	€377k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Life sciences (EU27_2020)	6,493 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting Sovereign and trusted cloud	77.6 % of enterprises (10+ employees)	observed	Eurostat · isoc_cicce_usen2 · E_CC	2025
Annual value of one engagement	€260k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	1,558 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	1.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract value is a configured assumption, not observed. Only 3 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 2 of 10 declared geographies are outside the European reference data (GB, US); the estimate covers the European footprint only.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€25.1m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-06-24
Assumed obtainable share of the serviceable market	1.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 3 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 2 of 10 declared geographies are outside the European reference data (GB, US); the estimate covers the European footprint only.

The solution, in one picture

Secure Federated Research Platform for CTD-ILD

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This diagram shows how Orange's sovereign cloud and HDS certification enable secure, federated data sharing for multi-center CTD-ILD research, leading to clinical insights.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

The ERS/EULAR clinical practice guidelines for CTD-ILD, developed by a joint task force and endorsed by ERN-LUNG, standardize screening, diagnosis, treatment, and follow-up, which creates a need for harmonized data collection across multiple European countries. Simultaneously, the EOSC-ENTRUST project is building a European network of trusted research environments for sensitive data, aiming for a common blueprint for federated data access and analysis. This combination of clinical standardization and research infrastructure development opens the door for sovereign cloud platforms that can support multi-center studies while respecting data protection regulations.

Sources: SIG-4816C72A7C1C openalex.org 2025-09-04; SIG-E0D9E1D05B21 openalex.org 2025-09-04; SIG-F90A6635CF68 cordis.europa.eu 2024-03-01

Who buys, and why now

The buyer is typically the principal investigator or clinical research director at a European university hospital or research network, who signs off on the platform. The pain is felt by the data managers and IT security officers who must ensure compliance with the new guidelines and enable secure data sharing across institutions. The trigger is the publication of the ERS/EULAR guidelines, which forces them to standardize data collection, and the need to participate in multi-center studies that require secure, interoperable data exchange.

Why it is hot now — every claim bound to a dated source

- The ERS/EULAR task force has developed clinical practice guidelines for connective tissue disease-associated interstitial lung disease, requiring standardized data collection and sharing across multiple European countries. [SIG-4816C72A7C1C, SIG-E0D9E1D05B21]
- A European network of trusted research environments for sensitive data aims to drive interoperability across countries and institutions. [SIG-F90A6635CF68]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a sovereign cloud platform built on Cloud Avenue / Ready SecNumCloud, certified HDS for health data hosting. The engagement would start with a discovery phase using Healthcare experts and AI/Data/Cloud experts to assess the customer's data landscape and compliance needs. Then, Orange would assemble a federated data access environment, leveraging the HDS certification to ensure trust, and using Cybersecurity experts to implement security controls. The platform would enable multi-center data sharing and analysis, with Orange Group researchers contributing to the design of the research workflows. The deployment would follow a phased approach, starting with a pilot site and then scaling to the full network.

Why Orange can win

Orange can win because it combines sovereign cloud infrastructure (Cloud Avenue / Ready SecNumCloud) with the HDS certification for health data, which is a critical requirement for clinical research. The availability of Healthcare experts and Cybersecurity experts within Orange provides the domain knowledge needed to address the specific challenges of CTD-ILD research. Additionally, Orange's role as a trusted operator with a strong track record in secure data handling (as evidenced by the MicroPort CardioFlow reference) gives it credibility. However, the assets are not unique, and competitors like Google Cloud and Microsoft also offer sovereign cloud solutions, so Orange must differentiate on the depth of its healthcare expertise and its ability to integrate with European research networks.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Cloud Avenue / Ready SecNumCloud	offer	L0	offer addresses the use case AND provides the technology	unconfirmed

Competitive landscape

HIGH competitive intensity (score 8.3; 0 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitor	Category	Position here	Basis	Evidence
Google Cloud	Hyperscaler	sells Sovereign and trusted cloud; competes in Cloud — also an Orange partner	structural	—
Microsoft	Hyperscaler	sells Sovereign and trusted cloud; competes in Cloud — also an Orange partner	structural	—
Atos / Eviden	Global systems integrator	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	structural	—
Deutsche Telekom / T-Systems	Telecom operator peer	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	structural	—
Sopra Steria	Global systems integrator	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	structural	—
Swisscom	Telecom operator peer	sells Sovereign and trusted cloud; competes in Cloud	structural	—
Telefonica Tech	Telecom operator peer	sells Sovereign and trusted cloud; competes in Cloud, Cybersecurity	structural	—
Dassault Systemes / 3DS Outscale	Sovereign cloud provider	sells Sovereign and trusted cloud; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 Are you currently participating in or planning a multi-center study on CTD-ILD that requires sharing patient data across institutions?
- 2 How are you currently managing the standardization of data collection for CTD-ILD patients, and what gaps have you identified against the new ERS/EULAR guidelines?
- 3 What is your current approach to data security and compliance for sensitive health data, and do you have any existing certifications like HDS?
- 4 Have you been involved in or are you aware of the EOSC-ENTRUST initiative, and would you be interested in aligning with its blueprint for federated data access?
- 5 What are the main challenges you face in enabling secure data sharing with partner institutions, and what would a successful platform need to address?

Objections you will meet

They will say	You can answer
We already have our own data management systems and don't see the need for a new platform.	That's a fair point, and many institutions have existing systems. However, the new ERS/EULAR guidelines require standardized data collection and sharing across centers, which is difficult to achieve with disparate systems. Our platform is designed to integrate with existing systems and provide a secure, interoperable layer that meets the guidelines.
We are concerned about the cost and the complexity of adopting a new platform.	Cost and complexity are valid concerns. We would start with a pilot to demonstrate value and minimize disruption. Our platform is built on certified infrastructure, which can reduce the burden of compliance. We can also work with you to phase the deployment and align with your budget.
Why should we trust a commercial provider with our sensitive patient data?	Trust is paramount. Orange holds the HDS certification for health data hosting, and our Cloud Avenue / Ready SecNumCloud is designed for sovereign and trusted cloud. We have deep expertise in healthcare and cybersecurity, and we are committed to meeting the highest standards of data protection. We also work with European research networks to ensure alignment with their requirements.

Risks and unknowns

The main risk is that the research community may not yet be ready to adopt a commercial platform, as the EOSC-ENTRUST blueprint is still in development and the guidelines are recent. There is also uncertainty about the specific data-sharing requirements across different European countries and the willingness of institutions to trust a commercial provider. Additionally, the competitive intensity is high, and Orange may face pricing pressure from hyperscalers. What is not known is whether the customer will prioritize sovereignty over other factors, and whether the platform can achieve the necessary interoperability with existing research infrastructures.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: competitive_landscape (no claim survived evidence binding); diagram (5 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
