

Implement identity-first zero trust for healthcare networks to secure remote clinician access to patient data and systems, addressing compliance and reducing breach risk.

Healthcare × Identity and access management × Zero trust architecture · OS158 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
70 is the world moving	76 can we play, can we win	HIGH 3 named in the evidence	€2.2bn partial evidence · per year	NEXT pilots published no volume pr...	L0 14 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is about implementing identity-first zero trust for healthcare networks to secure remote clinician access to patient data and systems, addressing compliance and reducing breach risk. It targets healthcare providers who are expanding telemedicine and remote monitoring, which increases the attack surface and the need for robust access controls. The time is now because zero trust is maturing, with published pilots and growing adoption in healthcare, as evidenced by Healthfirst's identity security-first approach.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€3.6bn €296m – €17.2bn	€2.2bn €182m – €10.6bn	€134m €10.9m – €636m	partial
Observed: tendered contract value, annualised	€70.8m	€70.8m	€4.3m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Healthcare (EU27_2020)	46,762 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting Zero trust architecture	65.4 % of enterprises (10+ employees)	proxy	Eurostat · isoc_cisce_ran2 · E_SECMNAC	2024
Annual value of one engagement	€970k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Size-weighted buyer base	5,698 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Adoption rate is a declared proxy. Network access control Part of this vertical is not covered separately by the enterprise ICT survey, so the all-activities rate was used for those slices. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 1 of 1 declared geographies are outside the European reference data (US); the estimate covers the European footprint only. Sector adoption is read from Eurostat's all-activities aggregate for part of this vertical, which the enterprise ICT survey does not cover separately: PROXY — ICT survey excludes health activities; PROXY — residential care

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€70.8m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-07-22
Assumed obtainable share of the serviceable market	6.0 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 7 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 1 of 1 declared geographies are outside the European reference data (US); the estimate covers the European footprint only.

The solution, in one picture

Identity-First Zero Trust for Healthcare

Orange asset Partner Customer-owned Third party / to be sourced

Orange orchestrates a managed zero trust service, integrating partner platforms to secure remote access to patient data while ensuring compliance.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Healthcare is rapidly digitalizing, with telemedicine and remote health monitoring becoming transformative solutions, especially for underserved communities, and edge-AI architectures enabling real-time patient monitoring over wireless networks. This expansion of remote access and IoT devices enlarges the attack surface, making zero trust essential. Zero trust is also maturing, with practical deployment models emerging for complex architectures like O-RAN, and industry commentary noting that while zero trust isn't broken, most companies are doing it wrong, indicating a need for expert guidance. Furthermore, identity security is increasingly recognized as the foundation of zero trust, with healthcare organizations like Healthfirst applying an identity security-first approach.

Sources: SIG-59C025D98330 openalex.org 2025-12-29; SIG-AECD651DA98 openalex.org 2025-12-17; SIG-FF57F665F32F openalex.org 2025-10-01; SIG-2CC53D62856D openalex.org 2025-08-18; SIG-E94A28E305BA Network World 2026-05-27; SIG-10E1BC61FB2F Palo Alto Networks 2026-05-12

Who buys, and why now

The buyer is typically the Chief Information Security Officer (CISO) or Chief Technology Officer (CTO) of a healthcare provider, who feels the pain of securing remote clinician access to patient data while maintaining compliance with regulations like HDS. The trigger is often a compliance audit finding, a security incident, or the rollout of a telemedicine program that exposes gaps in access control. The pain is operational: clinicians need seamless access from various locations and devices, but IT struggles to enforce consistent policies, leading to either security risks or productivity losses.

Why it is hot now — every claim bound to a dated source

- Healthfirst applies an identity security-first approach to implement zero trust. [SIG-10E1BC61FB2F]
- Palo Alto Networks offers an identity security platform for zero trust. [SIG-8C31B0BBEF89]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a managed zero trust service leveraging Orange Cyberdefense managed services, with expertise from Cybersecurity experts and Healthcare experts. The engagement starts with an assessment of the current identity and access landscape, then designs an identity-first zero trust architecture using partner technologies such as Palo Alto Networks, Zscaler, or Fortinet. Orange would deploy and manage the solution, ensuring compliance with HDS and SecNumCloud certifications, and provide ongoing monitoring and response through its managed services. The service would be delivered on Orange's secure infrastructure, with the option to integrate with existing customer systems.

Why Orange can win

Orange can win because it combines deep healthcare expertise with cybersecurity managed services and strong partnerships with leading zero trust vendors like Palo Alto Networks and Zscaler. Orange's certifications (HDS, SecNumCloud) are critical for healthcare compliance, and its ability to manage the entire lifecycle—from assessment to operations—differentiates it from point-product vendors. However, the assets are thin: Orange does not have its own zero trust product, so it must rely on partners, which could be seen as a weakness against competitors who sell their own platforms.

Named assets behind this — each individually inspectable (LK-08)

Competitive landscape

HIGH competitive intensity (score 7.6; 3 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

The competitive landscape is intense, with security specialists like Palo Alto Networks, Zscaler, CrowdStrike, and Fortinet selling zero trust architectures directly to healthcare. These vendors are strong in their respective technologies—Palo

Alto Networks has an identity security platform, Zscaler is strong in cloud-based zero trust, and Fortinet offers integrated security. Microsoft competes with its cloud and identity offerings, while Cisco provides network-centric zero trust. Regional integrators like Bechtle and Computacenter also sell zero trust, often with local presence. Orange's advantage lies in its managed services and healthcare-specific certifications, but it must differentiate from these strong competitors.

Competitor	Category	Position here	Basis	Evidence
Palo Alto Networks	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	evidenced	SIG-10E1BC61FB2F, SIG-8C31B0BBEF89
Zscaler	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	evidenced	SIG-46B6362BF559
Microsoft	Hyperscaler	competes in Cloud — also an Orange partner	evidenced	SIG-333EF44491DD
CrowdStrike	Security specialist	sells Zero trust architecture; competes in Cybersecurity	structural	—
Fortinet	Security specialist	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	structural	—
Cisco	Network equipment vendor	sells Zero trust architecture; competes in Cybersecurity — also an Orange partner	structural	—
Bechtle	Regional integrator or reseller	sells Zero trust architecture; competes in Cloud	structural	—
Computacenter	Regional integrator or reseller	sells Zero trust architecture; competes in Cloud	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 How are you currently managing remote clinician access to patient data, and what challenges have you encountered with compliance or security?
- 2 Have you experienced any security incidents or audit findings related to remote access in the past year?
- 3 What is your current identity and access management (IAM) infrastructure, and how mature is your zero trust adoption?
- 4 Are you planning to expand telemedicine or remote monitoring services in the next 12 months?
- 5 Do you have a preference for a specific zero trust vendor, or are you open to a managed service approach?

Objections you will meet

They will say	You can answer
We already have a zero trust solution from a major vendor like Palo Alto Networks or Zscaler.	That's true, and those are excellent products. But our value is in the managed service and healthcare-specific compliance. We can integrate with your existing investment and provide the expertise to ensure it's configured correctly for HDS and other regulations, which many organizations struggle with.
We're concerned about the cost and complexity of implementing zero trust.	Cost is a valid concern. However, our managed service can reduce the total cost of ownership by offloading the operational burden. We also start with an assessment to identify quick wins and prioritize investments, so you can phase the implementation.
We're not sure zero trust is necessary for our organization.	That's a fair point. But with the rise of telemedicine and remote monitoring, the attack surface is expanding. Zero trust is becoming a best practice, and regulators are increasingly expecting it. Our assessment can help you understand your specific risks and compliance requirements.

Risks and unknowns

The main risk is that healthcare providers may prefer to buy zero trust directly from a security vendor like Palo Alto Networks or Zscaler, bypassing a managed service provider. There is also uncertainty about the maturity of zero trust in healthcare; while pilots exist, volume procurement is not yet evident, and the lifecycle state is fading, suggesting the market may be moving past the early adoption phase. Additionally, the integration of partner technologies with existing customer infrastructure could be complex and time-consuming, potentially stalling deals.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a healthcare provider, differentiating our offer by combining ISO 27001, SecNumCloud, and HDS certifications with Orange Cyberdefense managed services, and reference MicroPort CardioFlow and Bliksund as proof points.
Sales	In a conversation with a healthcare CIO, say: 'We combine Orange Cyberdefense managed services with our HDS certification to help you secure remote clinician access and meet compliance—let's discuss your current identity and access challenges.'
Strategist / Innovator	Commission a deep-dive brief on identity-first zero trust for healthcare, leveraging Orange Cyberdefense managed services and HDS certification to map the competitive landscape against Palo Alto Networks' identity security platform.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.
