

Automated detection and documentation of asbestos-containing materials for compliance in public building refurbishments.

Public / Government sector × Regulatory compliance and reporting × Computer vision · OS167 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
50 is the world moving	56 can we play, can we win	MEDIUM 0 named in the evidence	€220m observed evidence · per year	NOW budgeted procurement within 1...	L1 2 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

This opportunity is to provide automated detection and documentation of asbestos-containing materials for public building refurbishments, using computer vision to streamline compliance reporting. It targets public sector organizations that must manage asbestos risks during renovation projects, and it exists now because recent procurement notices show active demand for asbestos removal and replacement works, indicating a pressing need for safe and compliant handling.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€220m €220m – €482m	€220m €220m – €482m	€6.2m €6.2m – €13.5m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€220m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	2.8 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 34 matching notices, matched on vertical via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 1 of 2 declared geographies are outside the European reference data (GB); the estimate covers the European footprint only.

The solution, in one picture

Automated Asbestos Detection Solution

This solution automates asbestos detection and documentation, providing faster, more reliable compliance reporting for public building refurbishments.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Public sector organizations are actively procuring asbestos removal and replacement works, as evidenced by a supply chain notice for replacing asbestos cement cladding in a building in Cyprus. This indicates an ongoing need for safe and compliant asbestos handling during refurbishments. The market is also seeing increased adoption of computer vision technologies for inspection and monitoring, as shown by a tender for sensor-based monitoring systems for bridges and viaducts in Italy, which suggests a broader trend toward automated, data-driven compliance in public infrastructure.

Who buys, and why now

The buyer is typically a public sector facilities manager or a procurement officer within a government department responsible for building maintenance and refurbishment. The pain is the manual, time-consuming process of asbestos surveys and documentation, which is prone to human error and delays compliance reporting. The trigger is a planned refurbishment project that requires asbestos-containing materials to be identified and documented before work can begin, as seen in the Cyprus tender where asbestos cladding must be replaced.

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution combining IoT sensors and computer vision capabilities from its IoT experts and Orange Group researchers, deployed on a secure, certified infrastructure (ISO 27001, SecNumCloud, CISPE) to ensure data sovereignty. The engagement would start with a pilot on a single building to validate the detection accuracy, then scale to a portfolio of buildings, integrating with the customer's existing asset management systems. Orange Cyberdefense managed services would provide ongoing security monitoring, and NVIDIA's technology could be leveraged for advanced image processing.

Why Orange can win

Orange can win because it offers a unique combination of secure, sovereign infrastructure (ISO 27001, SecNumCloud, CISPE) and expertise in IoT and computer vision from its research group, which is critical for public sector clients with strict compliance requirements. The reference from Grand Paris Sud demonstrates successful delivery of similar projects. However, the assets are thin in terms of a dedicated asbestos detection product, so the win would depend on assembling a custom solution and leveraging Orange's trust and security credentials.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L1	offer addresses the use case but not this technology	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 5.2; 0 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include industrial and OT specialists like Bosch and Honeywell, who have strong computer vision capabilities and experience in smart industries. Security specialists like DEDRONE by Axon and HENSOLDT also offer computer vision, with DEDRONE active in the public sector. Global systems integrators such as Accenture, Atos/Eviden, and Capgemini are active in the public sector and could offer end-to-end integration. Deutsche Telekom/T-Systems, as a telecom peer, also competes in the public sector. The customer will likely compare Orange against these players on the basis of security, integration capability, and price.

Competitor	Category	Position here	Basis	Evidence
Bosch	Industrial / OT specialist	sells Computer vision; competes in OX: Smart Industries	structural	—
DEDRONE by Axon	Security specialist	sells Computer vision; active in Public / Government sector; competes in OX: Smart Industries	structural	—
HENSOLDT	Security specialist	sells Computer vision	structural	—
Honeywell	Industrial / OT specialist	sells Computer vision; competes in OX: Smart Industries	structural	—
Accenture	Global systems integrator	active in Public / Government sector; competes in OX: Smart Industries	structural	—
Atos / Eviden	Global systems integrator	active in Public / Government sector	structural	—
Capgemini	Global systems integrator	active in Public / Government sector; competes in OX: Smart Industries	structural	—

Deutsche Telekom / T-Systems	Telecom operator peer	active in Public / Government sector; competes in OX: Smart Industries	structural	—
------------------------------	-----------------------	--	------------	---

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 How do you currently conduct asbestos surveys before refurbishment projects, and what is the typical turnaround time for documentation?
- 2 Have you faced any compliance issues or delays due to asbestos documentation in the past year?
- 3 Do you have a portfolio of buildings that require regular asbestos re-inspection? If so, how many?
- 4 What is your current process for storing and sharing asbestos survey reports with contractors and regulators?
- 5 Are you open to a pilot project on a single building to validate the technology before a broader rollout?

Objections you will meet

They will say	You can answer
Computer vision cannot reliably detect asbestos in all building materials.	That's a fair point. The technology is not perfect, but it can be trained on specific material types and used as a first-pass screening tool to prioritize human inspections, reducing time and cost.
We already have a trusted asbestos survey contractor.	Understood. This solution is not meant to replace your contractor but to complement them by providing faster, documented evidence that can be shared with regulators and contractors, potentially reducing the number of site visits needed.
Our budget is tight, and this seems like an additional expense.	We hear you. The initial investment can be offset by reducing the time spent on manual surveys and avoiding potential fines for non-compliance. We can also start with a small pilot to demonstrate the ROI before committing to a larger deployment.

Risks and unknowns

The main risk is that computer vision for asbestos detection is not yet a proven, off-the-shelf capability, and accuracy may be insufficient for regulatory compliance without extensive training data. There is also uncertainty about the regulatory acceptance of automated detection versus traditional human surveys. Additionally, the public sector procurement cycle can be slow, and budget constraints may delay adoption. What is not known is whether the customer will accept a pilot-first approach and whether the solution can be certified for use in their jurisdiction.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for a public building refurbishment project, differentiating with Orange's certifications (ISO 27001, SecNumCloud, CISPE) and referencing the Grand Paris Sud project as proof of public-sector delivery.
Sales	In a meeting with a public-sector facilities manager, say: 'Our managed security services, backed by ISO 27001 and SecNumCloud, can protect the data your asbestos surveys generate, and we can explore how our IoT expertise could support automated detection.'
Strategist / Innovator	Commission a deep-dive brief on computer-vision-based asbestos detection, leveraging Orange Group researchers and IoT experts to assess feasibility and IP position.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (4 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
