

Automotive OEMs need VSOC-based SIEM/SOAR platforms to achieve continuous compliance with UN R155 and report cyber incidents to authorities as enforcement begins.

Automotive × Regulatory compliance and reporting × SIEM and SOAR · OS171 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
55 is the world moving	67 can we play, can we win	MEDIUM 0 named in the evidence	€219m modelled evidence · per year	NOW budgeted procurement within 1...	L0 3 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

The opportunity

Automotive OEMs are facing the start of cyber enforcement under UN R155, which requires continuous compliance and incident reporting to authorities. Orange Business can deliver a VSOC-based SIEM/SOAR platform, leveraging our managed security services and TISAX certification, to help OEMs meet these obligations. This opportunity is urgent as enforcement begins now.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€247m €63.0m – €977m	€219m €55.9m – €866m	€7.7m €2.0m – €30.3m	modelled
Observed: tendered contract value, annualised	€10.0m	€10.0m	€351k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Automotive (EU27_2020)	6,364 enterprises	observed	Eurostat · sbs_sc_oww	2024
Enterprises adopting SIEM and SOAR	51.6 % of enterprises (10+ employees)	observed	Eurostat · isoc_cisce_ran2 · E_SECMSMS	2022
Annual value of one engagement	€240k per enterprise per year	assumption	config/sizing.yaml · fallback_bands_eur	size-2026-08-a
Size-weighted buyer base	1,995 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract value is a configured assumption, not observed. Only 1 matching tender notices, below the 6 needed for a robust median, so the configured band for this business domain is used. It is an assumption owned by innovation-radar-curator, not evidence. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 2 of 2 declared geographies are outside the European reference data (MA, UN); the estimate covers the European footprint only.

Observed: tendered contract value, annualised

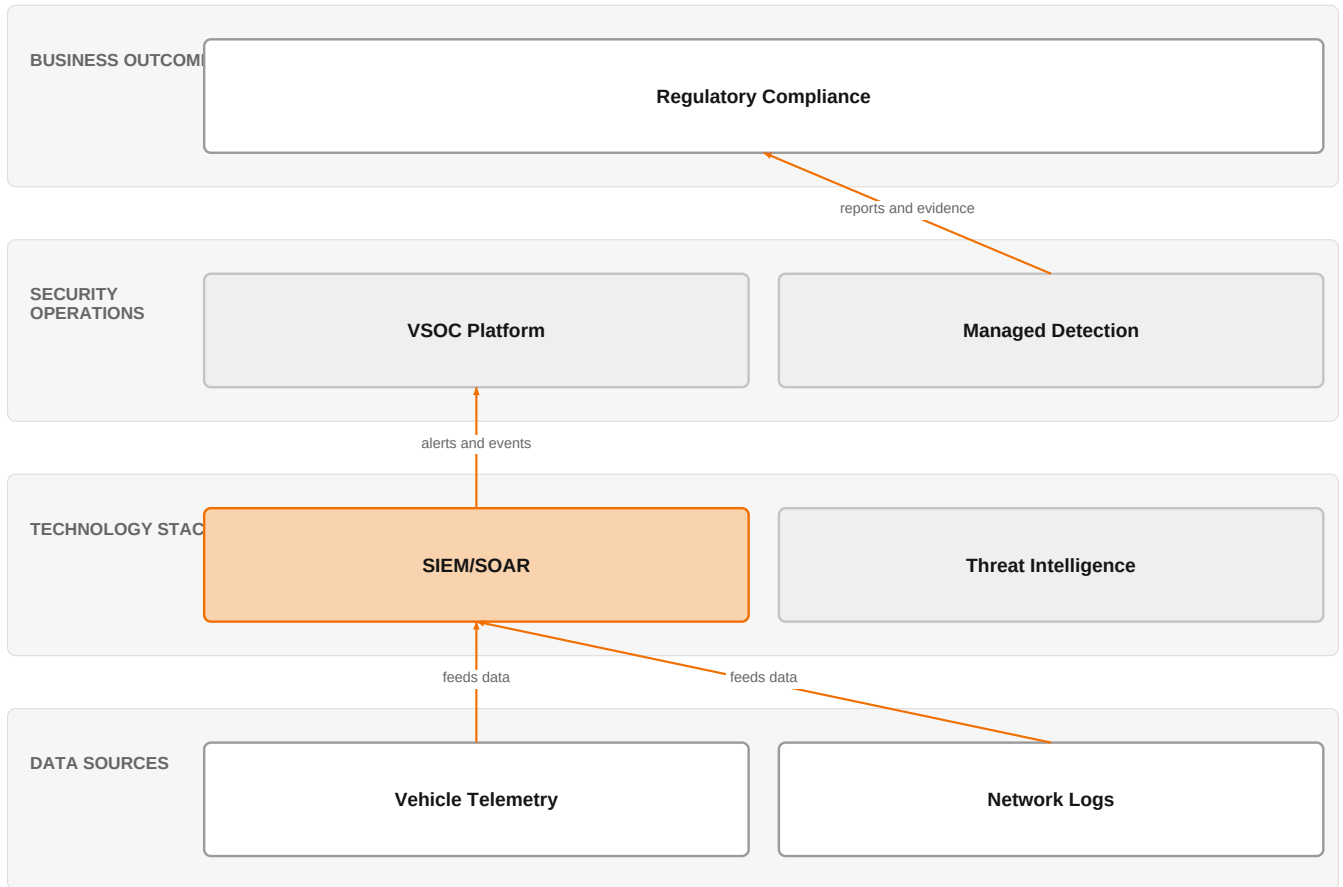

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€10.0m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 6 matching notices, matched on vertical via the CPV crosswalk — \$4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a

market size. 2 of 2 declared geographies are outside the European reference data (MA, UN); the estimate covers the European footprint only.

The solution, in one picture

VSOC SIEM/SOAR for Automotive Compliance

■ Orange asset ■ Partner ■ Customer-owned ■ Third party / to be sourced

This diagram shows how Orange's managed VSOC platform ingests vehicle and network data, analyzes threats, and produces compliance evidence for UN R155.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Automotive cyber enforcement is beginning, requiring OEMs to strengthen vehicle security and maintain continuous compliance. This is evidenced by recent coverage of enforcement starting and the emergence of specialized VSOC solutions. The regulatory push is creating a market need for SIEM/SOAR platforms tailored to automotive environments.

Who buys, and why now

The Chief Information Security Officer (CISO) or Head of Vehicle Security at an automotive OEM signs the contract, driven by the need to demonstrate compliance with UN R155. The pain is operational: they must continuously monitor vehicle fleets for cyber threats, report incidents to authorities, and prove compliance during audits. The trigger is the start of enforcement, which makes non-compliance a legal and financial risk.

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a VSOC-based SIEM/SOAR platform using Orange Cyberdefense managed services as the core, augmented by our cybersecurity experts and defense and security experts. We would leverage our TISAX certification to assure compliance, and integrate with Palo Alto Networks' technology for advanced threat detection. The engagement would start with a gap assessment of the OEM's current security operations, then deploy the SIEM/SOAR platform, and finally provide ongoing managed detection and response.

Why Orange can win

Orange can win because we combine managed security services with TISAX certification, which is directly relevant to automotive OEMs. Our cybersecurity experts and defense and security experts bring deep knowledge, and our partnership with Palo Alto Networks strengthens our technical offering. The reference from Toyota adds credibility, though the assets are not unique; competitors also offer SIEM/SOAR, so differentiation must come from our integrated approach and certification.

Qualifying questions for the first meeting

- 1 How are you currently preparing for UN R155 compliance, and what is your timeline for implementing a VSOC?
- 2 Do you have an existing SIEM or SOAR platform in place, and if so, what gaps do you see in meeting automotive-specific requirements?
- 3 Who in your organization is responsible for incident reporting to authorities, and what processes are in place today?
- 4 Have you already engaged with any other vendors for VSOC or SIEM/SOAR solutions? If so, what drove that decision?
- 5 What is your current level of cybersecurity staffing and expertise, and how would you handle 24/7 monitoring if required?

Objections you will meet

They will say	You can answer
We already have a SIEM/SOAR platform from another vendor.	That's a valid point, but automotive-specific compliance requires specialized knowledge and processes. Our solution is built on Orange Cyberdefense managed services and TISAX certification, which ensures you meet UN R155 requirements without overburdening your team.
Why should we choose Orange over a security specialist like CrowdStrike?	CrowdStrike is strong in endpoint security, but we offer a comprehensive managed service that includes SIEM/SOAR, backed by our TISAX certification and experience with automotive clients like Toyota. Our partnership with Palo Alto Networks also brings best-in-breed technology.
We are concerned about the cost of a full VSOC implementation.	Cost is a consideration, but the cost of non-compliance with UN R155 could be much higher. Our managed service model can be scaled to your needs, and we can start with a gap assessment to identify the most cost-effective path.

Risks and unknowns

The main risk is that the regulatory enforcement may not be as immediate or stringent as anticipated, leading OEMs to delay purchases. There is also uncertainty about the specific technical requirements for VSOC platforms and how they will be audited. Additionally, the competitive landscape is crowded, and we must clearly differentiate our offering to avoid being seen as a generic SIEM/SOAR provider.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Bid brief for an automotive OEM's VSOC procurement, differentiating Orange Cyberdefense managed services by integrating Palo Alto Networks technology and highlighting TISAX certification and Toyota reference to address UN R155 compliance and reporting.
Sales	In a meeting with a European automotive OEM's CISO, say: 'With UN R155 enforcement beginning, our managed SIEM/SOAR services, backed by TISAX certification and a reference from Toyota, can help you achieve continuous compliance and streamline incident reporting.'
Strategist / Innovator	Deep-dive brief on how Orange Cyberdefense managed services plus TISAX certification can be positioned as the compliance backbone for automotive OEMs facing UN R155 enforcement, leveraging Toyota as a reference.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: competitive_landscape (named entities that were never supplied: Atos/Eviden); diagram (2 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
