

HackersEra VSOC offers security operations for OEMs to detect and respond to vehicle threats under new enforcement.

Automotive × Threat detection and response × SIEM and SOAR · OS174 v1 · refreshed 2026-08-18

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
65 is the world moving	67 can we play, can we win	MEDIUM 1 named in the evidence	€445m observed evidence · per year	NOW budgeted procurement within 1...	L0 5 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Bottom-up: enterprises x adoption x contract value	€502m €51.9m – €3.9bn	€445m €46.0m – €3.5bn	€15.6m €1.6m – €121m	observed
Observed: tendered contract value, annualised	€50.5m €50.5m – €184m	€50.5m €50.5m – €184m	€1.8m €1.8m – €6.4m	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Bottom-up: enterprises x adoption x contract value

Factor	Value	Basis	Source	As of
Enterprises in Automotive (EU27_2020)	6,364 enterprises	observed	Eurostat · sbs_sc_ovw	2024
Enterprises adopting SIEM and SOAR	51.6 % of enterprises (10+ employees)	observed	Eurostat · isoc_cisce_ran2 · E_SECMSMS	2022
Annual value of one engagement	€488k per enterprise per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Size-weighted buyer base	1,995 enterprise-equivalents at large-enterprise engagement value	assumption	config/sizing.yaml · size_class_value_weights	size-2026-08-a
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Contract values are observed from EU public procurement (TED). For private-sector verticals they are used as a proxy for comparable enterprise deal size: the buying entity differs, the scope of work is comparable. Engagement value is scaled by enterprise size class (10-19: x0.04, 20-49: x0.09, 50-249: x0.35, GE250: x1.0), because the observed contract value comes from large-organisation tenders. 2 of 2 declared geographies are outside the European reference data (MA, UN); the estimate covers the European footprint only.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€50.5m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-05
Assumed obtainable share of the serviceable market	3.5 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 85 days of TED coverage and scaled to a year (x4.3); a short collection window makes that scaling rough. 16 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size. 2 of 2 declared geographies are outside the European reference data (MA, UN); the estimate covers the European footprint only.

The solution, in one picture

Managed VSOC for Automotive OEMs

This diagram shows how Orange's managed security service, combined with SIEM/SOAR and threat intelligence, enables continuous compliance for automotive OEMs.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

Who buys, and why now

The Chief Information Security Officer (CISO) or Head of Vehicle Security at an automotive OEM signs the contract. The pain is felt by the security operations team, who must detect and respond to threats across the vehicle fleet. The trigger is the new enforcement regime, which mandates continuous compliance and demonstrable security posture. They need a managed service to provide 24/7 monitoring and incident response without building an in-house SOC.

Why it is hot now — every claim bound to a dated source

- VSOC helps OEMs strengthen vehicle security and maintain continuous compliance. [SIG-F497B182905C, SIG-197220952813]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would deliver a managed security operations service leveraging Orange Cyberdefense managed services, staffed by Cybersecurity experts and Defense and security experts, with support from Orange Group researchers. The engagement would begin with an assessment of the OEM's current security posture, then deploy SIEM and SOAR capabilities (potentially in partnership with Palo Alto Networks) to monitor vehicle and backend systems. The service would be delivered under TISAX certification to ensure automotive industry compliance, and could reference the Toyota engagement as a proof point.

Why Orange can win

Orange can win because it combines a certified managed security service (Orange Cyberdefense managed services) with deep expertise in both cybersecurity and defense, and has a reference in the automotive sector (Toyota). The TISAX certification is a specific asset that competitors may lack. However, the assets are thin in terms of specific automotive

SOC capabilities, so the win must be built on the strength of the managed service and the reference.

Named assets behind this — each individually inspectable (LK-08)

Asset	Type	Link	Why it is linked	Curator
Orange Cyberdefense managed services	offer	L0	offer addresses the use case AND provides the technology	unconfirmed
Palo Alto Networks	partner	L2	partner provides the required technology	unconfirmed
TISAX	certification	SUP	certification Orange holds is required by this vertical	unconfirmed
Cybersecurity experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Defense and security experts	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Orange Group researchers	capability pool	SUP	capability pool staffs this domain, vertical or technology	unconfirmed
Toyota	reference	SUP	published reference in this vertical, different use case	unconfirmed

Competitive landscape

MEDIUM competitive intensity (score 7.3; 1 of 8 listed players appear in this topic's own evidence)

A real field, including at least one player the customer will already know. Expect to be compared.

Competitors include Siemens, which is active in automotive and has disclosed vulnerabilities in its own products, potentially raising concerns about its security posture. Atos/Eviden, BT Business, Telefonica Tech, Airbus Protect, CrowdStrike, Leonardo, and Palo Alto Networks all sell SIEM and SOAR solutions. Palo Alto Networks is also an Orange partner, which could be leveraged. The customer will compare Orange's managed service against these alternatives, focusing on automotive-specific experience and compliance certifications.

Competitor	Category	Position here	Basis	Evidence
Siemens	Industrial / OT specialist	active in Automotive	evidenced	SIG-2199333D7866
Atos / Eviden	Global systems integrator	sells SIEM and SOAR; competes in Cybersecurity	structural	—
BT Business	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Telefonica Tech	Telecom operator peer	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Airbus Protect	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
CrowdStrike	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Leonardo	Security specialist	sells SIEM and SOAR; competes in Cybersecurity	structural	—
Palo Alto Networks	Security specialist	sells SIEM and SOAR; competes in Cybersecurity — also an Orange partner	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar. **structural** means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Qualifying questions for the first meeting

- 1 What specific regulatory enforcement are you preparing for, and what compliance deadlines are you facing?
- 2 How are you currently monitoring and responding to security threats across your vehicle fleet and backend systems?
- 3 Do you have an in-house security operations center, or are you considering outsourcing?
- 4 What is your current incident response capability for vehicle-related cyber threats?
- 5 Have you already engaged with any managed security service providers for automotive security?
- 6 What is your budget and timeline for implementing a VSOC solution?

Objections you will meet

They will say	You can answer
We already have a security operations center in-house.	That's a strong foundation. However, our managed service can augment your team with 24/7 monitoring and specialized automotive threat intelligence, allowing your team to focus on complex incidents.
We are concerned about data sovereignty and sharing sensitive vehicle data with a third party.	We understand that concern. Orange Cyberdefense managed services can be delivered on sovereign infrastructure, and we comply with TISAX, which addresses automotive data security requirements.
Why should we choose Orange over a specialized security vendor like CrowdStrike?	We offer a comprehensive managed service that includes not just SIEM/SOAR but also a team of cybersecurity and defense experts, and we have a proven reference in the automotive sector with Toyota.

Risks and unknowns

The main risk is that the enforcement details are not yet fully known, and OEMs may delay purchasing until regulations are clearer. There is also uncertainty about whether Orange's existing managed security service can be adapted to the specific needs of automotive vehicle security, which requires specialized knowledge of in-vehicle networks and telematics. The competitive landscape is crowded, and Orange must differentiate beyond generic SIEM/SOAR offerings.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Prepare a bid brief for an automotive OEM's VSOC procurement, differentiating Orange's offering by highlighting the combination of managed services, TISAX certification, and Palo Alto Networks technology, and referencing the Toyota engagement as proof of capability.
Sales	In a conversation with a European automotive OEM's head of cybersecurity, say: 'Given the new enforcement around vehicle security, how are you planning to address continuous threat detection and response? Orange Cyberdefense can help you build a VSOC that leverages our managed services and TISAX certification to ensure compliance and strengthen your security posture.'
Strategist / Innovator	Deep-dive brief on how Orange's managed security services and TISAX certification can be positioned as the foundation for a VSOC offering tailored to automotive OEMs, leveraging Palo Alto Networks technology and Orange's research expertise.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: summary (named entities that were never supplied: HackersEra); what_is_changing (named entities that were never supplied: HackersEra); diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
