

Innovation Radar

What's hot — for us.

Briefing BeCode team

Business

Vision, Business context and User story

Innovation Radar vision

A regularly refreshed view of specific innovation opportunities (not broad generic tech themes).

Each scored on how **attractive** it is, how **urgent** the window is, and how strong **our right to win** is, based on our real assets, references and customer base.

((o)) A living radar
Innovation Topics enter, rise, and fade as external signals and internal traction change.

🎯 Should we bet on it?
Attractiveness, urgency and fit — do we have a right to play? Do we have chances to win?

⚡ Built for action
Every topic can become an action to a strategic innovator or a sales person.

Target users

STRATEGISTS & INNOVATORS

Need a defensible pipeline of new innovation projects — commercial offerings, new go-to-market, or operational solutions.

SALES TEAMS

Need a relevant, timely topic to spark interest customer and prospect.

PRESALES & PROPOSAL TEAMS

Need something genuinely different in RFPs — use cases, proof points, and our ecosystem angle in one place. Innovation topics will guide them in the right direction to search for an internal asset, ref. case or a partner.

User story

When I open a topic, I don't just want to read about it - I want to act on it. **Show me why it's hot right now, and why we can win with it.**

If the evidence, use cases and our proof points are all in one place, I can **plan my next move with confidence** whether it is a brainstorming session or a customer meeting.

I want to **find the right topics quickly** - for my internal brainstorming sessions, for my customer, for the vertical I'm targeting, or for the meeting I have tomorrow.

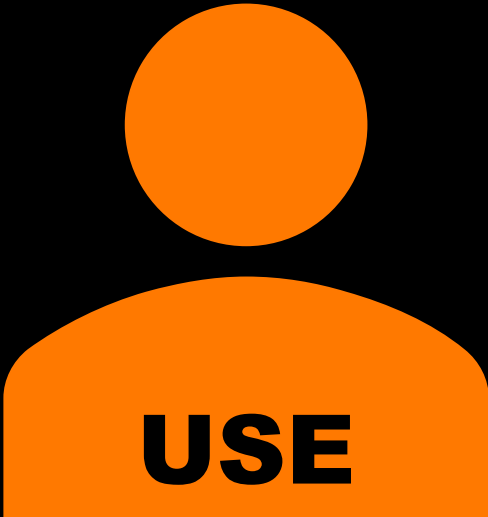

If I'm seeing a banking CIO on Thursday, the radar should hand me the three topics

What is important to the user?

-
- "Why hot" is a brief rationale explicitly grounded in the listed signals
- Signals are typed (trend, buying signal, regulation, market move...) and dated, mixing qualitative and quantitative evidence
- Right-to-win references specific entries from the internal data (assets, references, customer overlap, partners)
- Proof points (market size, pilots, business deals)
- From the topic view, I can easily come up with action (idea generation, opener, brief)

What is important to the user?

- All filter dimensions available as multi-select
- Persona + vertical combination returns topics ranked by relevant radar criteria
- Each role mode presets sensible defaults:
 - **Strategist** - opportunity spaces worth addressing;
 - **Sales** - persona/vertical first, only topics with enough internal content to credibly back up;
 - **Presales** - topics matchable to our use cases, proof points and offerings

USE

Business context the radar must speak

Global B2B digital solutions — every topic must map to this world

OUR BUSINESS DOMAINS

OX: Smart Industries
Connectivity Solutions
Cybersecurity
Cloud
CX: Customer Experience
EX: Employee Experience

CUSTOMER VERTICALS

Manufacturing (includes heavy industry, process manufacturing, consumer goods, and forestry & paper)	Construction
Retail	Lifesciences
Finance, Banking, Insurance services	Energy
Public/Gov sector	Wholesale
Defense	Media & entertainment
Automotive	Healthcare
	Natural resource3s
	Aerospace & defense

TARGET CUSTOMER PERSONAS

CIOs
IT and network executives
Security executives
COOs & production executives
CMOs & CX executives
CISOs
CDOs
Industrial safety managers
Quality managers

What a good innovation topic looks like

Private 5G + edge vision for safety compliance in mining

Hot: Regulators mandate real-time monitoring; edge AI costs down ~45%

Us: current offers XYZ, XX mining accounts, latest ZZ deal

Agentic AI for claims deflection in insurance contact centers

Hot: Agents now pass regulated-journey audits; early movers publish results

Us: current offers XYZ, XX mining accounts, latest ZZ deal, BB expertise

Digital product passports & traceability for materials producers

Hot: EU ESPR deadlines phase in — budgeted, regulation-driven wave

Us: current offers XYZ, XX material manufacturing accounts, latest ZZ deal

Network-as-a-sensor security analytics for banking WANs

Hot: Encrypted-traffic analysis production-grade; CISOs consolidating tools

Us: current offers XYZ, XX accounts in banking vertical, latest ZZ deal, XX ref. cases

Predictive worker-safety wearables for chemicals plants

Hot: Insurers cut premiums for monitoring; EU exposure rules from 2027

Us: Bundles with XX current offers XYZ, XX accounts in chemical vertical, latest ZZ deal

Sovereign cloud & AI enclaves for government citizen data

Hot: EU sovereignty rules 2027; tenders pre-announced with budgets

Us: Bundles with XX current offers XYZ, XX accounts in public vertical, latest ZZ deal

What makes it valuable to us?

Spotting innovation opportunities

**Should
we bet
on it?**

*Is the opportunity big,
growing, and urgent?*

**Can we
play?**

*Do we have the assets,
credibility, and access to enter
(strategy)?*

Can we win?

*Can we differentiate and beat the
alternatives?*

Tech brief

What is an opportunity space?

An opportunity space is a specific innovation opportunity, not a broad generic technology theme.

Opportunity Space = Vertical × Use Case × Technology

A good opportunity space must be specific enough to be usable by sales and presales. It should not be a generic theme such as “AI”, “Cloud” or “Cybersecurity”. It should be closer to a concrete opportunity statement, for example:

Examples:

TMT | Network Modernization & SD-WAN | Network & SD-WAN

Manufacturing & Industrial | Cloud Infrastructure Modernization | Cloud

Public Sector | Cyber Defence & Zero Trust | Cybersecurity

Examples of opportunity spaces components

Vertical

- **Fast Moving Consumer Goods**
- **Finance & Insurance**
- **Industry**
- **Public**
- **Retail, IT and Services**

Use Case

- **Energy optimization**
- **Demand forecasting**
- **IT operations automation**
- **Demand forecasting**
- **Imaging analytics**

Technology

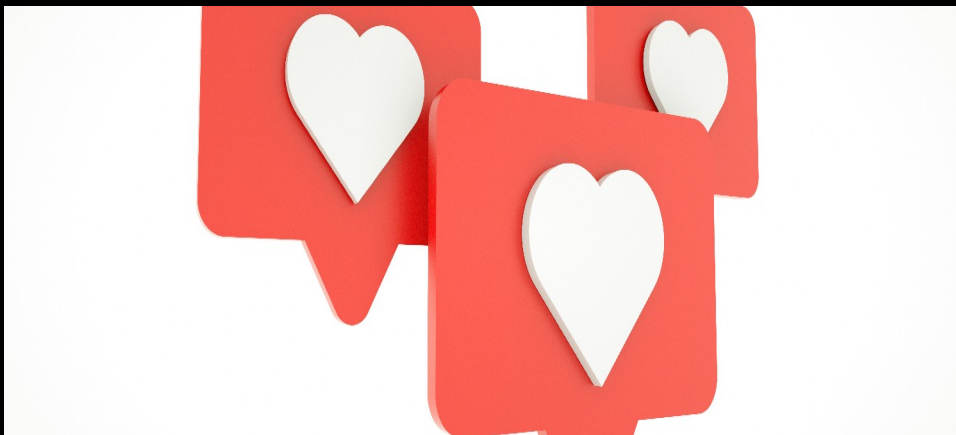

- **Cloud Data Platform**
- **IoT Platforms**
- **Computer Vision**
- **Machine Learning**
- **Generative AI**

OS001 = Industry × Energy optimization × Computer Vision

Opportunity discovery process

- 1. Collect external signals** News, analyst reports, regulation updates, market moves, technology announcements. Can be done with AI
- 2. Extract relevant themes** Identify repeated innovation phrases, emerging problems and new technology-use case combinations.
- 3. Create candidate opportunity spaces** Convert raw signals into structured opportunities: Vertical × Use Case × Technology
- 4. Curate and clean** Remove generic themes, merge similar topics and keep only specific, actionable opportunity spaces.
- 5. Score and rank** Measure attractiveness, time horizon and strategic relevance.

Signals → Themes → Opportunity spaces → Scoring → Radar

USER ACCEPTANCE CRITERIA

- **Trust:** Every topic explains why it is attractive or urgent, with visible sources or signals.
- **Freshness:** The radar shows recent signals and the last refresh date.
- **Actionability:** Every topic has a clear next step: idea, deep-dive, or customer talking point.
- **Filtering:** Users can slice by vertical, geography, domain and persona.
- **Signal-to-noise:** Each view shows only a focused number of topics.

PERSONA-SPECIFIC ACCEPTANCE CRITERIA

Innovator / Strategist

Can find at least 3 relevant topics for a chosen vertical or domain, see why they are hot, and decide quickly whether a deeper study is needed.

Salesperson

Can find 1–2 topics tailored to a customer's vertical and persona, with a clear “why this matters to them” conversation hook.

Presales / Proposal team

Can identify a differentiating RFP topic and see how it connects to offerings, partners, proof points or references.

Actionability for the user is the key

How to give sufficient insight on each “opportunity space” for the user to know what he/she can do next

Digital product passports & supply-chain traceability for materials

Updated 2026-06-18

OVERVIEW

EU digital product passports begin phasing in for batteries and textiles, with materials suppliers need item-level traceability spanning IoT capture, data exchange — squarely across our portfolio.

SIGNALS

- REGULATION** EU ESPR delegated acts confirm DPP timelines; materials categories expected 2028–29. (2026-05)
- BUYING SIGNAL** Tier-1 materials producers forming DPP task forces and requesting architecture workshops. (2026-06)
- MARKET TREND** Traceability platform market growing 28% annually in Europe. (2026-02)

What makes
it “hot”?

Where can
it deliver
value?

USE CASES & VALUE DRIVERS

- Item- and lot-level tracking from raw material to finished goods
- DPP data backbone with supplier onboarding portal
- Compliance reporting automation for ESPR categories

REGULATORY COMPLIANCE | **PREMIUM PRODUCT POSITIONING**

RECALL COST REDUCTION

WHO TO TARGET

PERSONAS · COO, Quality Manager, Chief Data Officer

VERTICALS · Materials, Chemicals, FMCG

GEOGRAPHIES · EMEA, Global

OUR RIGHT TO WIN

- IoT track-and-trace deployments
- B2B integration practice

PROOF POINTS

- IoT track-and-trace deployments in two logistics-intensive accounts.
- Integration practice already connects 300+ supplier systems for current clients.

PARTNER ECOSYSTEM · DPP registry consortium (exploring)

For who can
it deliver
value?

Can we
play? Can
we win?

SCORES — EDITABLE	
Attractiveness 69	
Market size & growth 40%	68
Signal strength & breadth 38%	72
Value pool for our portfolio 36%	
Urgency	
Window / competitor movement 40%	
Customer demand signals 36%	62
Regulatory & tech triggers 25%	88
Fit / Right To Win 61	
Asset & product match 38%	66
Reference cases & experience 25%	55
Customer-base overlap 25%	62
Capability & partner readiness 28%	69

Back-end
evaluation –
trust the
evaluation

Scoring ranking, examples how to measure attractiveness of opportunity spaces?

1. **Market signal strength;** Measures how visible the topic is in external sources.
2. **Source diversity;** Measures whether the signal appears across multiple independent sources.
3. **Evidence quality;** Measures whether the external signal is relevant and credible.
4. **Novelty and momentum;** Measures whether the topic is emerging, rising or changing.
5. **Strategic relevance for Orange Business;** Measures whether the topic fits the Orange Business context.

How acceptance criteria translate into scoring

The scoring model must not produce only a number. It must explain the number.

Each topic should include:

- **attractiveness score**
- **urgency / time horizon**
- **source evidence**
- **signal type**
- **“why hot now”**
- **“why this matters”**
- **recommended next action**

This makes the radar testable: if a user cannot explain why a topic is ranked, the scoring is not good enough.

Attractiveness score calculation

- **High attractiveness means:**

The opportunity is visible in the market, supported by credible sources, specific enough to become a business topic, relevant to Orange Business domains and has a big enough market potential

- **Low attractiveness means:**

The signal is weak, generic, one-off, vendor-specific or not clearly connected to Orange Business priorities.

Example, just to inspire you

Attractiveness Score = 30% Market signal strength

+ 20% Source diversity

+ 20% Evidence quality

+ 15% Novelty and momentum

+ 15% Orange Business strategic relevance

Fine-tuning logic

Internal data will be added in the next phase, after the external discovery and scoring model is finalized. It will be used to fine-tune the ranking and validate Orange's right-to-win. This is a work for next weeks.

Internal data fine-tunes whether it is relevant and actionable for Orange Business.

Internal calibration can use:

- **CRM customer overlap**
- **opportunity count**
- **pipeline value**
- **product / offering match**
- **people capability**
-

The goal is not to replace external discovery, but to adjust the ranking based on Orange's real right-to-win.

Minimum Viable Product — technical scope

- **Define opportunity spaces as:
Vertical × Use Case × Technology**
- **Prepare a structured process, possible to refresh, for discovering and saving opportunity spaces**
- **Build an attractiveness scoring system for opportunity spaces**
- **Generate a visual radar dashboard**
-
-

Ideas for extra content

- **Watchlist logic; Explain when a topic is kept as early signal instead of becoming a main opportunity space.**
- **External signal taxonomy; Define signal types: trend, regulation, buying signal, market move, technology maturity, proof signal.**
- **Time horizon logic; Explain how topics are classified as Now, Next or Later**
